

The available decisions for a report in the adverse event management system are 'accepted', 'rejected' or 'withdrawn'. Only accepted cases are included in the DAEN - medicines.

The decision reasons for a **rejected** report include that the case was identified as a 'duplicate', a 'foreign report' or if the causality was assessed as 'unlikely', 'conditional/unclassified' or 'unassessable/unclassifiable'. Further information on these causality categories can be found in the Uppsala Monitoring Centre guidance, available at: who-umc.org/media/164200/who-umc-causality-assessment_new-logo.pdf. However, for COVID-19 vaccines, adverse event reports with a fatal outcome are almost always accepted with a decision of 'causality possible', even where the case does not have sufficient information to be eligible for further causality assessment or when a Coroner has determined that a death was not related to vaccination.

The decision reasons for a **withdrawn** report include that the case is no longer a valid report, or that it was submitted in error. To be valid, a report must have an identifiable reporter, a patient, include one or more suspected medicines or vaccines, and one or more suspected reactions. Examples of the reasons for reports being rejected or withdrawn in the list below include that the patient did not receive a COVID-19 vaccine or other medicine; the report was submitted in error by a pharmaceutical company as it was already known to be a duplicate; the report was identified as a hoax.

The DAEN - medicines does not include cases identified as involving a medicine or vaccine accessed via the Special Access Scheme, Authorised Prescriber scheme, clinical trial notification scheme or clinical trial exemption scheme. Some of the case numbers listed below are for accepted cases that identify the suspect medicine was used in a clinical trial.

Important notes:

- Reporting of a death to the TGA does not mean that the vaccine caused the death or that the reporting doctor/individual considers that it was caused by a vaccine. The TGA strongly encourages consumers and health professionals to report suspected adverse events, even if there is only a very small chance a vaccine was the cause. The TGA has identified 14 reports where the cause of death was linked to vaccination.
- For adverse event data to appear in the DAEN – medicines the case needs to:
 - be accepted (e.g., not rejected as a duplicate report)
 - not be identified as involving a medicine or vaccine accessed via the Special Access Scheme, Authorised Prescriber scheme, clinical trial notification scheme or clinical trial exemption scheme, and
 - have at least one medicine or vaccine identified as being suspected of causing the adverse event (either directly or through an interaction)
 - have one or more suspected reaction(s), and
 - have a report date of more than 14 days ago.
- The majority (*ca.* 75%) of COVID-19 vaccine cases that are in AEMS but not the DAEN – medicines are identified as a duplicate of case that is included in the DAEN – medicines.
