

The list below is of cases currently included in the Adverse Event Management System, but not included in the DAEN - medicines, where a COVID-19 vaccine is listed as the suspected medicine and the case is reported to have a fatal outcome. The date range is from 1 December 2020 to 11 April 2024.

The available decisions for a report in the adverse event management system are 'accepted', 'rejected' or 'withdrawn'.

The decision reasons for a rejected report include that the case was identified as a 'duplicate', a 'foreign report' or if the causality was assessed as 'unlikely', 'conditional/unclassified' or 'unassessable/unclassifiable'. Further information on these causality categories can be found in the Uppsala Monitoring Centre guidance, available at: who-umc.org/media/164200/who-umc-causality-assessment_new-logo.pdf. However, for COVID-19 vaccines, adverse event reports with a fatal outcome are almost always accepted with a decision of 'causality possible', even where the case does not have sufficient information to be eligible for further causality assessment or when a Coroner has determined that a death was not related to vaccination.

The decision reasons for a withdrawn report include that the case is no longer a valid report, or that it was submitted in error. To be valid, a report must have an identifiable reporter, a patient, include one or more suspected medicines or vaccines, and one or more suspected reactions.

Examples of the reasons for reports being rejected or withdrawn in the list below include that the patient did not receive a COVID-19 vaccine or other medicine; the report was submitted in error by a pharmaceutical company as it was already known to be a duplicate; the report was identified as a hoax.

The list includes one accepted report which is from a clinical trial. Reports from clinical trials are not included in the DAEN – medicines. Further information on the DAEN – medicines is available at: www.tga.gov.au/safety/safety/safety-monitoring-daen-database-adverse-event-notifications/database-adverse-event-notifications-daen-medicines

The list below is of cases currently included in the Adverse Event Management System, but not included in the DAEN - medicines, where a COVID-19 vaccine is listed as the suspected medicine and the case is not reported to have a fatal outcome. The date range is from 1 December 2020 to 11 April 2024.

The available decisions for a report in the adverse event management system are 'accepted', 'rejected' or 'withdrawn'.

The decision reasons for a rejected report include that the case was identified as a 'duplicate', a 'foreign report' or if the causality was assessed as 'unlikely', 'conditional/unclassified' or 'unassessable/unclassifiable'. Further information on these causality categories can be found in the Uppsala Monitoring Centre guidance, available at: who-umc.org/media/164200/who-umc-causality-assessment_new-logo.pdf. However, for COVID-19 vaccines, adverse event reports with a fatal outcome are almost always accepted with a decision of 'causality possible', even where the case does not have sufficient information to be eligible for further causality assessment or when a Coroner has determined that a death was not related to vaccination.

The decision reasons for a withdrawn report include that the case is no longer a valid report, or that it was submitted in error. To be valid, a report must have an identifiable reporter, a patient, include one or more suspected medicines or vaccines, and one or more suspected reactions.

Examples of the reasons for reports being rejected or withdrawn in the list below include that the patient did not receive a COVID-19 vaccine or other medicine; the report was submitted in error by a pharmaceutical company as it was already known to be a duplicate; the report was identified as a hoax.

Some reports included in the list are accepted reports. These reports are from clinical trials, which are not included in the DAEN – medicines. Further information on the DAEN – medicines is available at:

www.tga.gov.au/safety/safety/safety-monitoring-daen-database-adverse-event-notifications/database-adverse-event-notifications-daen-medicines
