The historical data series is highly volatile year-on-year. Whilst over the period 2010-11 to 2014-15, the compound annual growth rate is -6.3%, there are a large number (over two dozen) top selling drugs that are losing patent protection that may mitigate this trend. The approach taken has been to take the average number of applications over the 2010-11 to 2014-15 period

Time taken to complete Pre-submission Planning Form - per application			
	Base case (hours)	2	TGA Subject Matter Experts
	Scenario 1 - no longer needs to be completed (hours)	0	TGA Subject Matter Experts
This means a 2 hour saving in the time per application (the assumed time taken to complete a PPF)			
Time saving from shift to electronic forms (for self-assessable variations and minor variations)			
	Base case (hours)	2	TGA Subject Matter Experts
	Scenario 1 - no longer needs to be completed (hours)	0	TGA Subject Matter Experts
This means a 2.0 hour saving in the time per application arising from efficiencies gained in the process by moving to electronic forms for the submission of these applications. It will save time by improving sponsors ability to identify the correct form (which currently they can get wrong and involve engagement with the TGA to identify and complete the correct form) and also allow sponsors to only fill in one form rather than having to complete multiple forms.

Proportion of applications that are incomplete and would benefit from electronic lodgement	18%	Derived from TGA data in word document 'Response to RIS - Unapproved products' Assumed proportion of ineffective applications that would not be incomplete with electronic lodgement due to prompts in electronic form. Ineffective applications is determined to include applications that have the following statuses: incomplete fax request for further information or duplicate applications. The incomplete fax request for further information correlates to the number of applications that require multiple engagements with stakeholders. While duplicate applications refer to the double handling of applications where the applicant is uncertain TGA has received the initial request and has resent the application.

Base case	0.0	
Scenario 1 - TGA maintains list of permitted indications	9.0	TGA draft RIS (2014) - Option 4: mandate permitted indications list Follow up information from some industry members who had reviewed a draft permitted indications list against their existing products identified that the time required to review current indications and select new indications would be around 40 minutes to one hour. Other industry members were concerned that an evidence review would also have to be undertaken. The TGA has assumed five hours per product as a conservative estimate, this will provide sponsors with time to satisfy themselves that the permitted indications are equivalent to their existing indications and that an evidence review is not required. Amending indications via grouping on the online application and submission portal takes four hours on average. This figure was proposed by industry. It is noted that the information in the electronic application and submission portal is pre-filled, so sponsors are only required to change the indications by selecting them from a searchable list. However, consultation with industry identified that sponsors review all information contained in the electronic application and submission facility before submitting an application, regardless of whether there have been changes to other details.

Number of applications for approval (CHC and ASMI)	Average 2011-12 to 2014-15 2,236	TGA data (email from David Poulton)	No growth in the number of advertisements is assumed. Series is volatile historically and moves cyclically with profitability of the industry and other factors (ie. health of the economy, medicine fashions, etc). It was considered more robust to take an average over the last four years and apply this over the projection period.
