Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have Irritable Bowel Syndrome as well as Chronic Fatigue Syndrome and chronic nightmares and was mostly bed bound. I found access to CBD oil, containing less than 1% THC and started to use it twice daily (when I first woke in the morning and after dinner at night). While I was taking it I didn't feel drugged or inhibited or have any altered thinking, however I started to be able to spend more and more time out of bed to where as long as I didn't do anything strenuous (like cleaning) I was able to do normal things around the house all day and only need a short nap midday. I was also able to eat and not have it go through me in the form of diarrhoea less than an hour after I had eaten, and my nightmares vanished completely.

The price of CBD is extremely important. Regardless of how good something is, if you can't afford it then you can't have it. Many people who are prescribed medicinal marijuana, for example, have never used a single script as it is prohibitively expensive. Being on a disability pension, I would be unable to access CBD if there were not competition between companies who sell it which naturally lowers its price. I think the people who need CBD the most are actually the people in the lower class, the ones struggling to get by financially.

What it comes down to is that CBD is not a psychoactive medicine and only has minor risks associated with over use, but lists longer than a highway of benefits. This makes me believe that CBD should be readily available to adult members of the public without a prescription and not behind the counter - just like any other vitamin or herbal supplement. And just like vitamins and supplements, it should come with a recommended dosage rate and the risks of over use on the packaging.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Consumer

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because it has been proven effective for many minor ailments. I myself, while living in Canada, was using CBD after I broke my foot, found it helped to ease the pain and was again given CBD to assist with sleeplessness brought on by constant shift time changes and no set schedule, it helped to relax into a deeper sleep quickly for an overall better well-being.

It is a viable pain assistant and should be accessible to people of all economic backgrounds, as are other pain medications.

Only publish my submission on the TGA website with confidential information redacted. Please do not publish my name

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I do not believe that there is a single risk here. Only good can come from this.

It needs to be affordable and accessible

Working through a qualified practitioner including a naturopath, homeopath, or natural therapist would be a great idea. people could then have additional support for there health and be monitored. However, I honestly don't think that there is a single risk here and being available on the shelf with a limit per customer for the month would equally be sufficient.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It is undeniable that the human body has an endocannabinoid system and our own bodies produce endocannabinoids.

I want to explore in a safe and controlled way the potential health benefits of introducing CBD oil in our bodies. I think there is more to win than to lose and everyone should be free to chose the use of it.

I am torn about the pricing. It has to be fair.

It cannot be so expensive that it's only accessible to a few but it cannot be so cheap that forces producers to cut corners and reduce quality.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have two loved ones that have medically diagnosed health conditions, where they are currently not getting enough benefit or relief with their current medication and they would strongly benefit from the use of CBD. A loved one has used CBD oil before safely with some relief. Yet as it has not been regulated and currently not been able to be sold here in Australia, I believe many people who are in desperate need for it, may be currently getting it from the wrong places and not getting to experience the full benefit as if it was regulated.

Lower price is of most important so that anyone who requires it can have full access.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I suffer from anxiety and by taking current medication available I unfortunately suffer side effects that interrupt my life and would prefer to have another option available

I think it should depend on what it is being used for.

Currently studying a health degree and the results of studies using CBD are promising and it would be great to see a wider range of the population have access to CBD so that we are able to further the studies and learn new outcomes on its use.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have used CBD for some time. I do indeed know when I have not kept up a regime of regular use. During these lapses, I find stress levels and sleep patterns are altered negatively. Since using CBD oil I have not had the need to take prescription medicine. I no longer take "Twynsta" (40mg telisartan, 5mg amlodipine). My blood pressure has normalised, I check it daily, and it is consistently well below an "average" 65 year old male.

I would use CBD in a safe way and read the label and warnings.

Knowing that myself and my family members suffer with anxiety and PND it would make a huge difference being able to access this for low dose usage. My son carries the MTHFR gene and is therefore more susceptible to mental illness than most so I would love to be able to lead by example with assistance from the oil and if safe for use in children then potentially help prevent a life filled with anxiety, stress and depression.

Of course. It needs to be affordable.

Allow overseas companies where already proven safe to import their products here until we have some tested.

I used to be so against any form of marijuana. Now I use CBD for pain, headaches, restless legs, and more. After surgery I stopped using morphine and used CBD instead and it helped block out all pain. I am able to function better on CBD than opioids at work as I am not impaired. This has saved me from a life of pain and discomfort.

I recently used CBD for pain without a prescription and I would like to continue to use CBD on a safe level at low costs to help with the daily pain that I have. It had Ben ideal for Australia to follow Canada and parts of the US and their success with CBD as it would be beneficial for many people.

If the price is too high then only those with a high Income can access it where as many Australians of all ages and income levels will benefit from CBD without it going to a stage where it is black market. Do it the right way and it will be successful

I would use CBD in a safe way and read the label and warnings.

Yes but under other medical advice

I have used it to reduce stress and to bring down my blood pressure as well as insomnia

As well as pain relief

I can afford \$35 each month

As most who need help with cbd are on low incomes

So the cost needs to be kept low so those on low income can afford it

..if it was higher cost it would be out of my reach and for many others as well

Through a authorized supplier who also does research into cbd and education

I would use CBD in a safe way and read the label and warnings.

I have been purchasing CBD off the black market because going to a cannabis clinic and getting a prescription proved to be too expensive. When trying the black market CBD, I had great results with my stress levels and anxiety. I work for long hours on the day on demanding projects that cause a lot of stress and CBD helps me maintain my sanity and health. I've also noticed CBD helps with inflammation I might have.

When travelling in Europe, CBD was regularly available in drinks and gummies and all sorts of things over the counter. I've never understood why Australia has taken so long to adopt this wonderful substance into our lives.

A lower price is important as CBD is less of a medicine and more of a Vitamin/Supplement to me. As it's effects are non-psychoactive and just provides great health benefits. So a lower price allows me to keep it as a part of my daily life.

I really believe it should be for sale in supermarkets like I have seen in Europe. It could be sold as an oil, in drinks, as gummies and anything else that takes it well. I would also love to see the market open up to manufacturers and wholesalers. It would create a new industry for Australia to grow out. There is a lot of potential for sports stars to represent CBD brands as it helps with their ailments and such. The potential for marketing with CBD is fantastic and should be encouraged!

No use at this stage.

CBD is a cannabinoid, and as such, it “switches on” the receptors of the endocannabinoid system, improving its performance. The endocannabinoid system works to balance the hormones, which in turn regulates the endorphins, thyroid, adrenal function, and immunity among other things. This is why people have such a wide range of benefits from taking CBD – it normalizes so many processes in the body and brings them back into alignment. Doctors need to be educated about CBD and all Australians need the right to access it to assist with ailments such as sleep, pain & anxiety.

The quality of the CBD needs to be ensured. I do not want a synthetic version. Correct labelling is required-no scams. Thus one needs to pay the price required for the best product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have known of people who have used it for depression, pain and anxiety with far better results than pharmaceuticals and not as intrusive to their life as pharmaceutical options. Not having shame and continuous pharmaceuticals that numb you rather than assist you are far more dangerous to most people than high quality CBD oil.

It should be available at a lower cost as it is a natural product as has so many other uses for the whole plant..clothes, soap,, oils, creams , paper, nsulation in homes and the list goes on. This is a viable farming solution with multiple uses. Regeneration is faster and has just as many uses as timber without the long growth period and destruction when felling trees for use.

Time to think of more than big pharma companies and help pur farmers and the health and well being of those that chose to use these products at a reasonable cost. Being that it does not cost alot to farm produce ot process.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I Have used CBD safely to great effect. At times for inflammatory joint or bowel symptoms, for mild anxiety and for insomnia. It has been very effective for all of these symptoms for me and easy to use just as and when needed. I do not feel any sense of dependence at all from taking it, can go months without it, but if for whatever reasons I have symptoms return CBD has been the MOST effective intervention I have found to quickly and gently turn things around, sleep well and feel comfortable again.

I know a couple people with epilepsy for whom CBD helps tremendously but it is so incredibly difficult and expensive for them to get, which is heartbreaking to witness when the benefit they get from it, with no side effects, is so profound.

I would personally love to have easier access to CBD myself and as a Naturopath, considering my research into CBD plus my own personal experience, I would dearly love for patients to have easy access to it as well.

I think a much lower price than what is currently available for the few people who manage to get CBD prescriptions is incredibly important. In fact I personally think the current pricing of CBD scripts in Australia is criminal, with families having to fork out hundreds of dollars for a herb every month that can easily be supplied at a much more affordable price. With good labelling and public health education as well education of practitioners - both allopathic and allied - CBD can be used safely by so many to great effect which would result in lesser need for cheaper, more readily available and yet more dangerous pharmaceuticals.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal

information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD has been patented by the US government for its neuroprotective properties. There is plenty of evidence when you look at risk versus benefit. CBD has no psychoactive effects but a lot of beneficial anti-inflammatory effect. This is a far better option than opioids to treat pain. Reality is desperate law abiding patients are accessing this illegally. Let's make it legal, low-cost and regulated.

Only publish my submission on the TGA website with confidential information redacted.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I currently use cannabis for both stress and physical pain. My doctors are aware and believe that the risk of addiction from cannabis is lower than the risk of addiction from Diazepam (Valium). I hate that I have to procure medicine that is untested and of unknown quality. I often have trouble accessing cannabis and the price is exorbitant. I also have no choice but to smoke or vape the herb, which I believe is detrimental to my lungs. Dosage is hard to monitor because each batch is very different. I usually don't want the affects of THC but have no choice. I would very much like to be able to access CBD in order to avoid all this.

If prices are too high then people, myself included, would continue to source CBD through uncharted sources. If prices were comparable or cheaper than what is currently paid (around \$220 per ounce) then I would most definitely prefer to have controlled medical source.

I believe access to CBD, a natural and very helpful herbal remedy, should be like access to paracetamol.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My aging family and I have not accessed CBD oil for pain, aching joints, tissue recovery after exertion or any of the reported benefits to mild mental stresses purely because we cannot do so legally. I hear and read reports from countries who can access the benefits of this generally accepted as safe substance and have heard from those who consider it a gift to be able to choose to manage pain and discomfort in such a safe and effective way as well as the feeling of mutual respect that arises from one's government respecting the population's right to choose based on adequate and growing data. Interesting that I can buy alcohol and tobacco (I don't because they are dangerous) but my wife cannot soothe her aching back with cbd oil.

I work with many people burdened by low income or subsisting on a pension whose weekly bill for prescription management of pain is a significant proportion of their income. I suggest that many people suffering levels of discomfort or who would seek the therapeutic values of cbd oil for mild yet ongoing issues would also be those struggling in more manual employment roles as age increases or those in relatively lower socio-economic categories. Some level of maintaining reasonable pricing by government would be acceptable to prevent exploitation of a rapid opening market by larger pharmaceutical companies. It is important that those wishing to explore the benefits of this natural and relatively inexpensive crop be financially able to do so.

As long as quality, purity and dose issues are quality assured with appropriate tracability as per food industry standards (eg iso/haccp etc) I would hope that markets would be relatively free to compete and distribute,

As cannabis use generally (albeit combined with THC) has been linked to educational issues and psychotic illness in the young and those genetically susceptible respectively these are questions worthy of international scientific literature review. The international community will have explored questions of any effects of susceptibility to schizophrenia or psychosis and effects on young

developing brain neurology in under 21 year olds with growing data since legalization and availability to actually research this potentially beneficial range of potential applications. This may highlight why option C with populations of citizens encouraged to provide usage feedback both anecdotal and potentially formal involvement in studies would help us generate much needed data to clarify questions. Use around machinery, driving regulations and blood concentrations may be addressed also to ensure that despite no psychoactive effects reported, we must ensure safety of attention requiring activities. This would be an interesting and easily accessible study avenue for university theses it seems.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have been taking 4 drops daily with no side effects for about a year, without instruction from a pharmacist. Earlier this year I developed Shingles & experienced no pain only some mild tingling & itchyess.. I can only attribute the no pain to the CBD. I also use the oil topically on sunburn, chapped lips etc to great effect it's also reduced the shingle scarring.

I personally don't require CBD at the moment. I work as an Oncology Massage Therapist and have several clients who would benefit greatly from CBD for pain relief. I have also seen tv segments on the positive effects CBD has for epilepsy sufferers and the like. It needs to be readily available at low cost to those who desperately need it now.
Warm regards, Suzanne Hamson

It needs to be readily available at low cost to those who are suffering and need it now.

CBD needs to be readily available over the counter at Chemists throughout Australia as soon as possible.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I'm very pro CBD. I suffer from endometriosis and am seriously struggling with pain every day. CBD oil has been a lifesaver for me, mentally and physically. However, as much as I've enjoyed the benefits, its incredibly expensive and I'm tired of asking my parents to help me out in paying \$150 a month. If the prices were lower it would make life so much easier.

A few years ago I had an accident and had my arm hanging by nothing but the ulnar nerve, I suffer from pain from the injuries still and have trouble sleeping.

I came across good cbd oil a while back and having 10 drops morning and night it made a huge difference and I could get some decent sleep.

I've been on lrica for nerve pain and after research that drug shouldn't be allowed for sale and it has made me forget things.

Tramadol, oxy and endone are the other drugs drs give out and they make you feel worse than having some natural cbd oil.

I can get it for \$170 a bottle and that puts it out of reach for the people that need it.

The people that need cbd oil often can't work a full time job or don't work at all and if people could afford it they might be able to get back to having a life

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

Proposal C will impact me in a positive way. Myself and my family have not used CBD safely, as this point and given this medical history of CBD, I believe it's reasonable for it to be included Again within the medical field. I'm aware of the it's been used right through history for a very long time! It's even been found in archeological digs! I have no doubt our ancestors were not silly and they used it for a very good reason, especially since it was widely used all over the world! I'm aware the cannabinoids within CBD perfectly match human DNA, so why wouldn't we use it?..... Why would society have ever taken it off the list of medicines? I'm aware that when it was taken away from doctors in 1937, the American Medical Association had a representative testify AGAINST the removal of it. I'm aware that some people have misused aspects of Cannabis, but then our society is FULL of alcoholics, yet that's not illegal! In fact, that is encouraged?.... It's strange.

The higher or lower costs of CBD is important! I believe the price of CBD is as important, as any other medicine! Why would it cost more than aspirin or panadol? If other medicines are subsidized, why wouldn't CBD? If CBD is not subsidized, I would suggest that is discrimination. Lower income families may choose cheaper medicines, due to their financial priorities. It's human right to be given equal opportunity to medical care.

I would use CBD in a safe way and read the label and warnings.

Medicinal. cannabis has proven efficacy with severe conditions, but the cost is prohibitive. It is terrible to hear patients are unable to try or access something that may help, due to the cost. The current TGA guidelines while better than they were for access, is still very limiting to some conditions. There are many improvements that can still be addressed and acted upon to allow better access to this medication for patients.

I suffer from endometriosis and have found it beneficial for pain. Even though i work full time, the cost is very prohibitive. Many of my fellow sufferers are unable to work continuously and therefore cannot benefit from this. Most people who may benefit from CBD are chronically ill and again unable to work consistently or full time, again making cost prohibitive.

I think that there are rules for some and not all. We currently have several presidents / prime ministers (albeit not bright ones) promoting the use of medications off label and with no evidence, trials or proof because of COVID-19. Medicinal cannabis has been used for hundreds of years and there is tonnes of evidence for its use in other countries. It is interesting that they are disregarded as not current (creates a lag for time allowed to provide) or from Australia (well we have been here 200 years, other countries thousands.. why can they not be referenced). CBD is not evil and i am familiar with so many people who have benefited from it for things from autism, epilepsy, pain, anxiety, fibromyalgia etc but yet they cannot afford it. That is unideal.

I would use CBD in a safe way and read the label and warnings.

I believe that CBD oil should be legalized for non-prescription consumption by the Australian public and furthermore that dose control should be avoided and common sense respected, as with other herbal supplements available on the market.

I have been endlessly recommended this product by international consumers on social media in relation to lower back pain, sleep support and digestive health. I have researched the product and feel safe and confident in using it in the same manner that I use many other legal, beneficial herbal products for my health at my discretion.

The many people I speak to who use this product safely have experienced benefits pertaining to their health and quality of life and this has not taken place with the involvement of pharmaceutical intervention monopolizing the market. It would be extremely distressing if the TGA moved in favor of lobbyists and industry as opposed to what is best for the health of the community.

Lower cost equates to widespread availability and black market economies. Higher cost equates to an exclusionary market based on class and privilege determining an individuals capacity to access beneficial products, and increased incarceration and fines for marginalized people when they are inevitably punished for having no alternative but to access the products via non-legal avenues. Higher costs therefore equate to discrimination and further criminalization of already marginalized communities.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to try CBD for my elevated PSA reading (Prostate). My GP wont refer me to a CBD Clinic and thinks CBD is wild. I need to test and support my own body in overcoming its own disease naturally rather than invasive surgery through a biopsy method.

Lower prices would assist the low income earners in taking CBD and testing its health benefits.

My wife of 32 years died of side affects of chemotherapy for breast cancer. She tried to access CBD but it was considered to be too risky, I wish she could have tried it to overcome her health rather than taking mass doses of anti-cancer therapy drugs.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have long standing chronic pain related to injuries, accidents, anxiety and significant skin condition. I do not tolerate prescribed medications and my life is torture every day of my life. I have no break from my conditions and would very much appreciate the opportunity to try CBD in an effort to relieve my symptoms and have some quality of life. My life is slipping away from me. I do not want to take opiates as I have ceased taking such medications a few years ago related to fear of using same and side effects. I am prescribed prednisone for my skin conditions which I don't want to rely on but have no other choice of treatment.

Lower price would be more manageable for me to pay for my management and maintain my health and enable me to pay for my living costs.

as per GP referral and prescription

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD for pain control and restful sleeping with excellent outcomes. I'm currently not using it as I'm healthy and pain free.

Obviously poor people have pain and suffering as well. Keeping it within reach of all is the only responsible outcome.

Breast milk is the natural baby food now proven to be more effective than all the chemical formulas. Natural medications will be proven best when studies are not fun need by self serving pharmaceutical companies. Time to move out of the dark ages.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The availability of CBD would allow me greater choice and control in decisions I make on my healthcare. It would provide another option for me to use as and when I require, as my health needs change. Over a lifetime, I may use CBD for a variety of reasons, depending on my need. This would make my life more comfortable and potentially reduce my requirement to access General Practitioner services for minor ailments that can be addressed by the CBD.

The pricing of CBD is important to me, it would be difficult for me to access it if it were at a high price point and in consideration of this, I believe it should be readily available without restrictions and a multitude of suppliers encouraged, as per other supplements. A variety of suppliers would also ensure there is a variety in the delivery eg liquid oil, capsules of varying sizes. This would make it more accessible to many people and enhance ease of use.

The TGA should allow ease of access for CBD, by making this product able to be distributed/sold in a large variety of retail environments (eg pharmacy, health store, supplement store, supermarket supplement section).

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Having the CBD available at lower prices is important. And even more so at this COVID time when there is a lot of anxiety and stress. It could be a way of helping many people and the price will definitely be an important factor to access as a lot of the people with the most stress and anxiety have had changes in jobs and/or income.

I would like to have the same access that my extended family have in other parts of the world. It has been approved there and has been shown to help with many different conditions. To strictly restrict and put barriers to access does not seem to be in the best interest of the Australian people. Please consider the benefits and real risks when deciding on the CBD regulations and scheduling.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

CBD oil save lives because the human body functions on CBD receptors through the Endocannabinoid system ECS, which Cannabinoid receptors are believed to be among the most plentiful in our central nervous system, and some researchers hypothesize that we could have a third, undiscovered one, as well. CBr are present throughout the body, embedded in cell membranes. Many tissues contain both CB1 and CB2 receptors, each linked to different actions.

Found in vital and reproductive organs, connective tissues, various glands, gastrointestinal and urinary tract, and white blood cells, CB1 is most abundant in the nervous system (brain and spinal cord). CB2 is found predominantly in the immune system, the gastrointestinal tract, and also the tonsils and thymus gland.

Through those receptors, the ECS helps regulate a lot of important functions, such as: Appetite, Digestion, Immune function Inflammation, including neuroinflammation, Mood, Sleep, Reproduction/fertility, Motor control, Temperature, regulation Memory and Pain Pleasure/reward.

CBD oil has been proven to cure a disease we keep "running for when you should watch a movie, called "Run From The Cure" Rick Simpson CBD oil. Rick Simpson has cured many disease to both humans and animals alike.

The USA has legalized the cannabis plant as well as here in Australia in Canberra it is legal for recreational purposes.

How far behind the rest of the world do we need to be and how long do people need to suffer?

Please wake up and realize how beneficial and amazing CBD oil is for healing the body with a natural product with zero side effects CBD oil was given by god and out-lawed by men whose bodies depend upon the the very existence of oil itself.

I am embarrassed by Australian archaic laws.

Thanks for listening.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have chronic insomnia and am willing to try nearly everything to help me get a better night's sleep. I've read many people's experiences with CBD products in the states and they all claim to help with their sleep and anxiety. I've also looked into purchasing it here, however there are so many hurdles to get it legally and it's so expensive. I would love the opportunity to try it.

Giving people access to CBD at a lower price would benefit so many people struggling with insomnia. At its current price it is out of reach for many Australians

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had many friends and family use CBD oil from overseas suppliers, with different results. From no change at all, to vomiting and nausea for a few hours. I think this difference in results would have a lot to do with differing qualities.

I would like to see this product available on the market with quality testing and guidelines on how to take it, so people aren't going behind their healthcare to try it.

I want to see it available for mild anxiety, restlessness, insomnia and PMS, before it becomes available for serious chronic conditions. There needs to be more research.

I think the price should reflect how much it costs to make. It shouldn't be subsidised by Medicare so however much it costs, it should cost.

Date: Thursday, 21 May 2020 8:59:42 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used CBD oil prior to it being regulated and removed from general use several years ago. CBD oil helped me significantly with pain, cognitive issues, brain fog, nausea, gut issues, autoimmune and inflammatory issues related to a long term chronic illness that has no treatment. It helped reduce stress and anxiety caused by long term health issues and I was able to participate more happily and actively in life. As a mother and wife this was of huge importance and significance to me. It changed my life in a positive way. When it was suddenly removed from access I felt my health and well being deteriorate and my ability to function and level of fulfilment and happiness in life declined. This extremely safe product that is easily available in many places world wide should not be withheld from the Australian community. I did not experience any side effects from using the CBD oil. I am happy to discuss with you but do not wish to put my personal medical history on file here.

Cbd oil should be available to all Australians. We have a major health crisis with the rise of chronic illness, mental illness and disability due to health issues. CBD oil could have a significant impact increasing the health and well being of the community and should be widely available and affordable to anyone who would have positive health outcomes from using this product that is safer than many of the prescription or over the counter pharmaceutical products.

CBD oil should not be controlled by pharmaceutical companies whose main interest is profit. The public should have access to a fair priced, clean, GMO, pesticide free product.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am allergic to nearly all painkillers (NSAID, Codeine, Asprin) and many pharmaceuticals and often suffer because of the lack of viable alternatives. The availability of CBD would improve my quality of life significantly, particularly as I suffer frequent debilitating pain with menstruation and deep bone pain related to osteoporosis.

The price of CBD is an important consideration for all Australians and high priced CBD would not be financially viable for my situation or for many other people. CBD should be a product that is widely available, easily accessible and supplied at the lowest possible cost.

The public should ideally be able to access CBD at many suppliers. It should be retailed as per other supplements eg Vitamin C, Evening Primrose Oil in a variety of business types (eg pharmacies, supplement stores, supermarkets).

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

If CBD oil relieves constant arthritic mildish pain(although this pain requires paracetamol) on a fairly regular basis as I do not like the possible damage that paracetamol can do to liver especially after reading the caution addendum on the use and dosage. Surely CBD is much safer as long as a pensioner can afford to buy it rather breaking the bank as one has to if one has to go the way the only way our government has decided. \$270 for a consultation with a pain specialist then a precipitous medicine of a bottle of CBD oil costing \$385 00 for a 25ml bottles and bottles

The extremely high pain specialist costs and the extremely high CBD cost ensure that only those with a high income can afford ongoing supply whereas allowing the purchase of only well regulated and cheaper costing after removing the supply chain of specialist and pharmacist ensure those on a lower income will be able to afford their CBD and lessen the toxic effects of both pain medication and NSAIDs

As long as the CBD has been properly supervised in producing clean therapeutic oil and delivered to the retail outlet properly sealed then apart from pharmacy other retail stores where pain killers are sold

I would use CBD in a safe way and read the label and warnings.

After purchasing CBD in Europe I utilised it for anxiety and insomnia. It was under my own disgression and was used in amounts under advice of my Osteopath. As a studying nutritionist, I would like the option to be able to provide this valid and extraordinary organic, natural, non-addictive substance for the care of myself and my future patients. CBD has assisted my in managing anxiety and improving the foundation of all wellness, my sleep.

I purchased a small amount of CBD in Europe for about \$40, a suitable and reasonable price that would nit have a huge affect on my income and is certainly less than many available supplements.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

The proposed change to CBD availability would impact myself and my family greatly and in very positive ways. I used CBD oil in California and found it highly effective in helping my issues with back pain, anxiety/stress and sleep. My sister used it in Europe and found it very helpful with anxiety and sleep. We are both very disappointed it is not already available here as it is in many countries around the world. My mother would very much like to try it for the same reasons myself and my sister have. In my opinion it is safe, effective and could mean less reliance on many compounds that are both addictive and have serious potential side effects.

I am on a disability support pension at present and lower prices would allow me to integrate it into my current health regime. I believe a low price is vital, it will allow people of any means access.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a sufferer of psoriatic arthritis, conventional prescribed medicine is extremely intense and causes many undesired side effects. To have the choice to use a naturally derived medicine (not a chemical) that can be used for maintenance or top off medication which is not effective, would be so valuable. I don't like taking pain killers on an on going basis

It should be lower and affordable so all Australians have the choice to try to use is, especially if not subsidised by the government. Most people who are ill and need medications, cannot work or work little and do not have lots of money available

If available freely, like any over the counter medication or use of essential oils, individuals should follow recommended dosage. Side effects should be clear if taken to excess. It should be available only from chemists though, not supermarkets, health stores etc

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have fibromyalgia and three kids. I'm also breastfeeding my youngest. Cbd is safe to breastfeed I like many other drugs that could have side affects. I also have pnda and feel that cbd would help keep my calm and less anxious. It would also allow me to sleep. We also have a child on the spectrum with eating difficulties and think it could help her in a number of ways.

We are a one income family. We need low cost cbd to be able to afford it or for it to be covered by phi or medicare in some way. We can't afford expensive medicines and this is one reason I'm currently battling my conditions without any.

I think cbd should be available in pharmacies over the counter. I'm happy to have my details recorded and be limited to x amount per month for low cost cbd oil.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My family has a history of cancer, and I have a history with anxiety, and I would like to avoid living with both.

I turn to things like alcohol, cigarettes or video games to deal with depression, and these are not beneficial ways to deal with it.

I would prefer to have a dose of cbd instead, and feel this will be much more beneficial as it doesn't require use of a drug to cope with it.

There are plenty of people who would benefit from access to it, so obviously low price would be best.

There are too many needs that are expensive, and since it is not expensive to make, it needs to be cheap

Cbd oil will help get people off harmful drugs, and plenty of marijuana smokers may stop smoking if they can take cbd legally and safely.

Do not publish my name or my submission on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD has proven time and time again to help me with my anxiety, It is such a calming natural alternative to prescription meds that I refuse to take. It is not addictive what so ever and can be used for a variety of illnesses both mental and physical. I believe CBD is so important in tackling the mental health crisis that humanity is currently facing.

CBD should be accessible for everybody the price must be on the lower end.

Only publish my submission on the TGA website with confidential information redacted. Phone number and email

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from fibromyalgia and would love some pain relief and a good nights sleep

I live off a pension of under \$20,000 ayear!

Much research has been done world wide proving the safety of CBD so I feel all Health Professionals would be well qualifed to offer it as part of a patients treatment. As a natural product it would needto beavailable to all practitioners usuing natural products.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would not use CBD in a safe way and will not read the label and warnings.

I have had many personal experiences watching people use this product for improved wellbeing and has assist them be free from joint pain. I have worked in NDIS and see people not having any quality of life free from physical pain and would greatly benefit from CBD. Currently my family member is paying for very expensive CBD product for knee pain and under this current lockdown finds it hard to finance to keep out of pain. As a medical research scientist with past experience testing on cannabinoid receptors and nutrition allows me to have sound knowledge about the mechanisms. The benefits for applying CBD to help people is endless and would be highly beneficial.

For any plant grown on this planet should never be abused commercially and over priced. Low income earners must and deserve the right to medical help and be free from pain. Now in poor economical times people deserve to have accessibility to CBD.

Qualified and accredited naturopaths are suitable to assist with the education and administration of CBD to their clients.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I would use CBD in a safe way and read the label and warnings.

I would not use it for myself or my family but I know several of my very complex gut pain patients who have comorbid anxiety and nausea would greatly benefit from the opportunity to trial it to see if it assists their severe and often debilitating symptoms

Patients need to be able to afford this as a therapeutic option especially patients with complex medical needs who often dont have a lot of money as they are spending most of it just surviving

I believe that patients whould consult their doctor or a pharmacist prior to having it accessible and be explained the risks and benefits and side-effects and have drug interactions checked etc. This is a drug that affects the central nervous system and can cause drowsiness and cerebral depression and therefore should be treated like all other drugs and psychoactive agents that can cause these effects. We wouldnt want someone to take it and operate heavy machinery and then someone to die as a consequence and so appropriate counseling is required prior to its use.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I suffer from PTSD from a car accident that took the life of my son and injured myself and my other 2 children. Ive been on strong painkillers, , and other medications and have tried pain management clinics, and all other available therapies. I did abit of research on medicinal cannabis and thought I'd give it a go as I was at the point where I needed to increase my medication. I went through a medicinal cannabis clinic and was prescribed what dosage I should start on. I was then told the cost and it was truly outrageous. \$275 for a 10ml bottle of CBD and \$245 for the THC and \$630 for 30grams of flower. The cost was shocking to me but I really needed to try it so I had to borrow money to get my first script filled. Within the first week of me taking it I had already felt a massive change with my stress and anxiety levels, my ptsd episodes decreased, my pain subsided and I had the most amazing sleep which I hadn't done in 20yrs. So for me it was a game changer. Then the reality of the cost set in, there is no way on earth we could afford it because the dosage I need would have me run out of oil within a week so I'm now stuck in a position where I have to stay on all of the pills that im on because I can't afford to pay for the medicine that gives me most relief for so many things. I really hope things change so that I can live a quality life like everyone else because the way things are at the moment with cost and access, I'll never ever have the medicine I need to be able to function properly.

I have heard lots of positive stories about CBD from it helping muscular pain, arthritis, migraines, sleep disorders, ADHD, anxiety, all kinds of problems that people have had no results with using medicines. It is a natural plant grown in the ground, I don't understand why these days we are being pushed to go down the pharmaceutical Path (actually i do know why!) when we could heal so much quicker with natural medicine. I know people who have suffered dreadfully and then used CBD very respectfully and all symptoms gone! I don't think people would abuse it because there is no THC in it and also if a person is in pain, it doesn't take a lot to ease that pain.(with CBD) so they would treat that oil like gold.

Legal CBD oil that has no limit on quantities will mean more people who need it can afford it. Current conditions make it prohibitive and means the use of pharmaceutical drugs which while cheap have terrible side effects.

Lower prices will mean my daughter will be able to afford it. At the current prices she can not afford the prescribed amount for her.

CBD oil is readily available in many countries and research is showing very positive outcomes. Making it legal without prescription and in the right quantities for a reasonable price means more people will be able to use it instead of poisonous pharmaceutical drugs that damage the liver and have many other side affects.

I am needing this product to assist me with severe arthritis in feet and hands, so much so my feet are becoming deformed.

I also have and Auto Immune disease)

Lymphocytic Colitis, therefore do not wish to take other pain medications as they aggravate my stomach and make the Colitis worse.

I also have PTSD from a Traumatic event as a child, this would greatly assist those visits to the supermarket etc, be more pleasant.

Although I am sleeping better as I age it would also be beneficial in assisting me get a full nights sleep, without waking throughout the night.

PLEASE consider making this widely available

CBD should be available to ALL Australians at a low price, the plant is readily grown in Australia, therefore should be available at a fair and equitable price.

Especially with the loss of employment due to Covid-19 many can not afford paying higher prices for a natural substance, nor pain relief that has high taxes.

It should be something that is NOT put into the hands of the Pharmaceutical companies so they can reap large profits.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

traditional prescribed medication comes with many side effects, big pharma do not care about these symptoms. Cbd comes with far less adverse health effects, the physco-active ingredients can be removed and the cbd still has a much safer effect on illness, allwing people of all ages a safer method to control a large variety of illnesses with little or no side effects.

Cost is very impirtant, i would expect the australian government to stand behind the robust research being demonstrated within this heavily regulated alternative industry, and look to provide generous subsidies.

availability is crucial, through a local pharmacy is a great option.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have SO many friends and family members who have illnesses from anxiety, to Cancer and diabetes, HIV and many more who have ALL improved when taking CBD (also some with THC) They found their mental health and their physical health improved. One huge thing I noticed was how much i improved pain. Every single person mentioned the reduction of pain.

I currently am prescribed a CBD and THC full spectrum oil that is SO expensive for someone like myself with no medical insurance and not a lot of money. IT is approximately \$150 for month. Which is astronomical for most people. The CBD is available for such cheap prices elsewhere in the world so the government also cant just make up a price charge too much and end up ruining this release.

I would like CBD products available at any chemist of specialised place bush as priceline etc. available with out a prescription and just offered as a over thee counter product for people in need and given once speaking to pharmacist (much like the current laws for cold and flu tablets) The CBD /THC should be available the same way.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

“Healing doesn’t mean the damage never existed, it means the damage no longer controls our lives”.

This last Decades health journey Part 1

I am always looking to Enhance my Every-day, and when I discovered as a newly graduated Clinical Nutritionist that I had many food intolerances I wept for all the flaky pastry, eggs, and Turkish bread that the leaky gut result eradicated from my diet overnight.

I always knew something wasn’t quite right within my body from my yo-yoing weight and how my peers talked about theirs. I was a sensitive kid and always got sick if I worked overtime without fail. But it wasn’t until I was at my worst and heaviest that I actually did something about it and went and got educated – because who really knows what’s right with all the conflicting info out there.

My test result indicated serious leaky gut that had likely stemmed from a trauma I had as a toddler and worsened over time, as well as a genetic susceptibility. After I got over the mental devastation of the results – I physically put them into action overnight. And immediately I started to reap the benefits of not having constant reactions from food! My sleep improved and I didn’t need the regular 12hr nights to catch up. 8kg of weight just dropped off me and I didn’t have the constant palpitations in my gut that I thought were ‘normal’! I now realise that this is inflammation in action.

The initial period was a huge learning curve and put into practice many of the nutrition subjects I had recently studied. It took a lot of time and effort to integrate, especially the constant reading of labels and menus. But the benefits outweighed all this. And when it came to the reintroduction of foods, the ones that remained on the no-go list were a slither of the first reactionary list. Hallelujah.

Overall, I felt and looked better - ahem slimmer in the sense that is commercially acceptable. But in other ways my robust health deteriorated a little over time. My blood sugars became hyper-sensitive and my normal range was narrower. I found I had to eat on the clock every 3 hours or else!?! That’s how fast and efficient my metabolism had become in comparison to being overweight and sluggish, but it wasn’t doing me many favours either..

I had always been fit and participated in high impact sports but soon found that these now wiped me out. So, I had to make a switch physically and mentally to restorative yoga instead of long-distance running or hiking and the more active yoga variants. I also couldn't sleep on my side anymore which was weird, and experienced mild anxiety for the first time from muscular tension. In fact lifting anything heavy often gave me a headache or migraine that no amount of magnesium or coconut water would reduce.

Over time as chronic pain and inflammation tend to do it took its toll and affected my work, relationships, my bubbly and outgoing personality aka self-esteem and lessened my ability to fully participate in life sometimes or at least as much as I wanted to.

But you do also come to accept what you cannot change.

“Of all the food intolerance tests I have seen throughout my decades career as a nutritionist and it has become a speciality that I have learnt so much from and helped countless others discover, recover and be able to take control of their lives. But to this day my IgG test results are still the worst of them all”

Over time I accepted the negatives I'd received from this discovery and focused on the positives. But I still couldn't ignore that the quality of my life had changed, and it was disappointing not to be able to carry out my active pursuits.

Losing part of an identity is always hard! “However we all get older and experience this to some degree, and although I felt that it were premature for someone in their 30's I had made a big change to my life and body and it seemed it was here to stay.”

But like every journey this was just part of it and now I am speaking to you from 10 years on..

And there is always hope that recovery is possible and one day you will feel more like your old self. Then again, I never expected this day to come and I don't usually like surprises but this one was different.

The Results

My blood sugars have radically improved. I don't get the crashes; my appetite is less, and I don't get as hungry.

Therefore I don't need to eat as much or as frequently, so I must be digesting food better as my energy has increased considerably and it lasts throughout the day. Hello productivity!

My circulation is better, so I feel the cold less. And previously I was always the one that felt the cold and carried layers everywhere to stay in 'the cosy range.'

My internal batteries (cellular mitochondria) feel fully charged so I have tons more energy and this has also contributed to my healthy circulation.

I have always known I was a light sleeper, but I never knew I was a bad sleeper! However, I now sleep deeper, need-less and regularly wake up before my alarm. The quality of my sleep has much improved and this has lifted my mood and energy profoundly. Yee-ha

Not only that, I wake up and I am alert! I could jump out of bed instantly and start my day whereas I used to (and still enjoy) taking it slow and needed a couple of hours to wake and warm the body up slowly.

I can exercise intensely again, lift weights, do active yoga, run! And I can do this multiple times per week and am loving getting strong again. I have missed this!

And amazingly I can also get up and do this first thing in the morning which I haven't done in the past decade without setting off my nervous system which gives me the shakes and then getting a headache/migraine for the day.

My anxiety was only mild and occasional, but now that's gone.

I get less overwhelmed and can think more clearly and get multiple tasks done without overwhelm. My head is just so much clearer, and I am so much more productive from dawn till dusk.

I have less muscular tension, aches and pains and am not as stiff. But I still love my morning stretch routine, warm shower and a luxurious restorative yoga session as needed.

I don't have to spend a fortune or my time on 2hr weekly massages, but still benefit from one every month or two.

My cyclical pain and inflammation are much improved. And I have reduced my pain killer use from multiple times every month to 1 in 7 and counting.

Friends have even noticed my vibrancy and zest for life and even say that the energy behind how I speak has changed!

And I am sure this list will grow over time

Now I cannot claim you will experience all or any one of these changes. But if your body is out of whack and you are not feeling like you and are suffering, I have no doubt you will experience something as the benefits are far reaching. But it's also a bit of grey area- or should I more rightly say green area

As health practitioners we are always wary of health claims and usually say "ease up" on those health claims people be realistic – you'll give them false hope!" But I can honestly say I have experienced every one of these and want others suffering to benefit too.

How I got my life back..

Having studied nutritional medicine, I have a thorough understanding of how the human body works and the many and various ailments it can suffer from. So I was incredibly surprised to find that us as humans and all vertebrates, have a 13th bodily system that I had never heard of or been taught in college! It's called an endocannabinoid system and you can learn about it briefly here [The Endocannabinoid System](#).

Not only do we have a system that benefits from the introduction of these cannabinoids from the Cannabis or Hemp plant we also produce a small amount of these cannabinoids naturally, that's why it's named the endocannabinoid system! (endo is from the word endogenous which means having an internal cause or origin). And one example of this I found fascinating is that cannabinoids are found in breast milk.

CBD is not psychoactive or does not make you high - that is the cannabinoid THC which is more widely known, however THC also has numerous medicinal properties beneficial for pain and the symptoms of disease, but that can be a topic of interest for a further post. And there are many other cannabinoids being widely studied for their benefits, such as CBA, CBC, CBG, CBN to name just a few. Here is a little bit more detail about CBD- [What is Cannabidiol?](#)

The endocannabinoid system is known to bring about balance within the body and works along with our other 12 bodily systems to do so.

Homeostasis is the goal to maintain a relatively stable equilibrium between interdependent elements, and sustained by physiological processes.

However I strongly encourage you to do your own research and not to take my word for it completely. Look up CBD and your ailment/s as there is plenty of info out there on the world-wide web.

It's not a magic pill – nothing is! But it definitely is a missing link that combines with all the other healthy changes carried out to heal and nourish our bodies.

But it's given me superpowers - that's how it feels compared to the fate I had become conditioned too. And I am just as gobsmacked as you, but also know it's not the end of my journey.

It must be at a price point that is affordable to all. And a quality product and strength that has benefits opposed to a low strength product that contains CBD just for show.

I am a clinical nutritionist and healthcare practitioner and believe it should be available over the counter at health food stores and within private practice. You may have differing strengths as complementary medicines also do, so that the higher strengths are made available for certain conditions via consultation with a complementary healthcare provider. I stand by herbal medicines and whole plant medicine. The synthetic route of pharmaceutical medications goes against this whole plant synergy to degrade and devour a superior natural plant or food as a medicine.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My father has ulcerated colitis, and food. My mother has arthritis and trouble sleeping. Both may benefit from affordable access to high quality cbd

My parents are on a pension, with very small disposable income

Online access

Only publish my submission on the TGA website, do not publish my name or any other information about me.

We have a close friend who uses CBD for Parkinson's and gets great relief , the cost is unaffordable for most people .

Not everyone can afford CBD today . . Cost is important for everyone , the current price , I think makes it unaffordable for the average Aussie .

I'm not sure pharmacies and doctors are the people to Manage CBD , there are lots of doctors with an interest in CBD maybe there should be specialist doctors to advise and dispence .

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Hello - My name is Zak Atkins - I have been living with pain since I was diagnosed with scoliosis and Sherman's disease when I was 16. I'm a medical cannabis user and I have been pharmaceutical free for nearly 3 years.

I developed a habit for Valium and benzodiazepines after the doctor prescribed them to help with muscle aches and pains. CBD oil helped me to break my vicious addiction to benzodiazepines and also helped me to live completely pain free 3 years running - I function in society much more efficiently now. It is essential for my well - being.

I have a medical cannabis script from cannabis doctors Australia - I am in full support to the proposed rescheduling changes the TGA has proposed - this change will lower the CBD scheduling from a schedule 4 substance down to a schedule 3 substance which means that you will no longer need a prescription from your doctor and it will be available over the counter at a pharmacy for adults over 18.

I have found so much relief and happiness in using CBD oil to manage my pain. The CBD oil is very beneficial to my endocannabinoid system which is our body's endogenous system that regulates various bodily functions from hormone production to temperature regulation.

Since discovering CBD oil I have had a new appreciation and outlook on life, no longer am I struggling to have a full night's sleep and feeling anxious constantly in pain. Living with pain can be quite mentally exhausting, the CBD makes me feel like I have more room to think and things that would ordinarily bother me seem to be irrelevant.

I personally have had no adverse effects from using CBD besides the unpleasant taste of the oil. Unfortunately cannabidiol can only contain up to 2% of other cannabinoids - which means that we are missing out on the major components of cannabis as a medicine. My

experiences with CBD isolated on its own is not nearly as effective as whole spectrum CBD oil.

Unfortunately the CBD isolate that cannabis doctors Australia was providing me wasn't sufficient for my needs. I have had to purchase full spectrum CBD oil through the grassroots movement because it seems to be the only thing that truly works in comparison to the CBD isolate working some days and not at all on others.

I simply cannot afford to take the risk and pay \$240 for 2400MG for this CBD that works only half the time.

I would much rather support the Grassroots movement and purchase lab tested quality full spectrum cbd extract (that has been nanoemulsifying to increase the bioavailability so you need 1/4th of the amount from hemp at half of the cost at \$150 for 2000mg)

The proposed changes will be very beneficial to me, as I have friends and family seeking medical cannabis for their healthcare. 80% of these individuals simply cannot afford the absorbent consultation fees that the dispensaries require - not to mention the ongoing costs of medicines.

I would like to see safe access for children - This was the biggest push for the movement in the USA with a beautiful young girl Charlotte Fig suffering from chronic seizures until she used cbd oil and lived seizure free.

I do not think it is fair to be able to deny opportunity to heal not to any human being regardless of age.

Energy drinks are not safe for children to consume but with the correct warnings and labeling these products are fit for sale to adults under 18. CBD needs to be labeled accordingly just like the other products not fit for children to consume.

I am hoping that hamp Farmers Australia wide will have the ability to process and manufacture CBD for sale over the counter - I'm growing concerned that the pharmaceutical industry will try to push out all of the grassroots individuals that have been supporting the hemp/ CBD / medical cannabis movement since day one.

My concern also is that the CBD oil will be extracted from medical Cannabis which will be quite a difficult process for grassroots individuals to establish - not to mention the absorbent costs of this manufacturing process.

I am really hoping that they help hemp farmers to have the ability to process and manufacture the hemp plant into a thriving and booming CBD economy for Australia creating jobs and giving us Australians the best access to healthcare during this Corona pandemic.

The USA & Canada have deemed medical dispensaries as an essential service during this time of crisis. This should indicate that it is also essential for us to be able to freely access whole spectrum medical cannabis products.

Thank you for taking my submission into consideration and I really hope that this submission makes a change. Please contact me if you have any questions or you would like to discuss my consultation today.

Thank you and have a great day

Kind Regards,

Zakery Troy Atkins

The proposed changes will be very beneficial to me, as I have friends and family seeking medical cannabis for their healthcare. 80% of these individuals simply cannot afford the absorbent consultation fees that the dispensaries require - not to mention the ongoing costs of medicines.

I would like to see safe access for children - This was the biggest push for the movement in the USA with a beautiful young girl Charlotte Fig suffering from chronic seizures until she used cbd oil and lived seizure free.

I do not think it is fair to be able to deny opportunity to heal not to any human being regardless of age.

Energy drinks are not safe for children to consume but with the correct warnings and labeling these products are fit for sale to adults under 18. CBD needs to be labeled accordingly just like the other products not fit for children to consume.

The USA & Canada have deemed medical dispensaries as an essential service during this time of crisis. This should indicate that it is also essential for us to be able to freely access whole spectrum medical cannabis products.

I am hoping that hemp Farmers Australia wide will have the ability to process and manufacture CBD for sale over the counter - I'm growing concerned that the pharmaceutical industry will try to push out all of the grassroots individuals that have been supporting the hemp/ CBD / medical cannabis movement since day one.

My concern also is that the CBD oil will be extracted from medical Cannabis which will be quite a difficult process for grassroots individuals to establish - not to mention the absorbent costs of this manufacturing process.

I am really hoping that they help hemp farmers to have the ability to process and manufacture the hemp plant into a thriving and booming CBD economy for Australia creating jobs and giving us Australians the best access to healthcare during this Corona pandemic.

The best way for the public to access CBD would be through a pharmacy. This is the best possible way forward right now.

CBD will be far more accessible to everybody in Australia. There are a plethora of people who are unaware even to this day that medical cannabis is available through their doctors referral to a cannabis specialist clinic.

I'm sure there will be very positive result from the public, CBD sales will most certainly increase injecting money into the economy at a time when we so desperately need it.

Once more of an understanding is established from the tga then a rescheduling can be looked at.

It is my hope to see CBD oil and CBD related products widely available to the public for all ages with informative labelling and packaging.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD for chronic shoulder pain and aiding in sleep. This was from an over the counter supplier in the UK, and this was extremely helpful in its desired use. My partner also used CBD for anxiety and stress and they found this extremely beneficial at easing anxiety levels

The price in the uk is approx £70 for a small vial. This is not a cost effective solution for its intended uses as those suffering with conditions, such as chronic pain, are most likely unable to work and therefore pay for such an expensive product

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I have not previously used CBD however have researched the positive affects it has on people suffering from stress and anxiety. We currently have a terrible rate of suicide in our community and the emergency services/defence force; something needs to be trialled and/or used immediately in order to slow and reduce these numbers.

The fact that it has been shown to work in other places around the world and friends have used it to wonderful effect should be enough to not matter about pricing. However, with the problems surrounding suicide this provides an opportunity for the govt. to subsidise a natural substance that can provide benefits.

There are numerous companies that produce and supply CBD; reputable distributors should be able to send this product to Australia in order to help out the population.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have never used CBD oil myself, but have done a lot of research on its benefits in helping many people for a multitude of illnesses. I do not comprehend how backward Australia has been in denying this product to people who are suffering, while giving them toxic drug chemicals that don't ease their pain or suffering. That is not protecting them. That is like torture.

The price should be low so all people can afford a product needed.

It should be available behind the counter at chemists or health food outlets after consultation with the qualified pharmacist or alternative medicine practitioner without prescription.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil with the recommended advice for my general health and wellness

I prefer to buy from wholesale distributors at a reasonable price.

Health Food stores and qualified therapists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Being a pensioner of the proposed changes would greatly affect my ability to afford and use CBD effectively I have used it in the past under Dr advise results have been wonderful better sleep significantly reduce pain and reduce muscle spasms. Currently the cost of quality CBD Is extremely excessive and being on a disability support pension it's extremely difficult to afford something which also allows me to reduce my pharmaceutical requirements.

Being a pensioner obviously lower prices make CBD more affordable and accessible with current pricing it's extremely difficult to afford

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the “Hybrid” option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I need to deal with chronic pain following hip injury & degenerative spinal stenosis. Advised that surgery is not an option & unfortunately cannot use anti inflammatory medications. My pain management includes particular exercises, meditation & the like. When pain is worse, particularly by end of day & at night I found relief with low dose panadeine very helpful but no longer available. Doctors are reluctant to prescribe but do not offer alternatives that are reasonably free of side effects. I do not like taking drugs but as my ailment (& age) progresses my agility & well-being is deteriorating which is proving difficult when I need to continue working full time as Government has raised pension age.

I have heard many first hand accounts now of how beneficial CBD has been in managing chronic pain & “getting their life back” without any undesirable side effects. I would very much like to trial CBD but will not do so until legal in Australia.

Only publish my submission on the TGA website with confidential information redacted. My name & email

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I am a grower and supplier of organic herbs and microgreens in Cairns. I have a large and growing clientele who are all health conscious and are requesting this product for all of the previous aforementioned reasons. In 2018 I spent 2 months in Oregon, California, and Washington state, speaking with growers and users of CBD products. During my research trip I was looking into quality production of CBD products. I found no reports of side effects whatsoever and only a great number of benefits - again aforementioned. This product is needed to be made privately available for any and all who wish to seek the benefits from it.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am an Australian nutritionist working in the UK where commercial sale of CBD oil is permitted. I work in a store that sells high quality CBD products and have spoken with many clients that use CBD oil for mild stress, anxiety, insomnia and chronic pain. These people see significant changes in the quality of their life whilst using the CBD oil.

I personally have used CBD oil for anxiety and found it very effective for management of symptoms, and my partner has used it for chronic pain. He notices a reduction in overall pain but also the ability to sleep through the night whilst using the oil.

CBD Oils used in this story at 5mg or 10mg oil. Dosage varies person to person but it always within the safety limits.

CBD oil price should be competitive but not undermine quality. I would rather pay a slightly higher price for a quality product.

CBD oil anywhere is currently not that cost effective for the whole population so this should be considered.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

My husband is suffering from chronic pain due to Degenerating Disc Disease, ever since he started on the CBD Oil he has cut down on different hardcore medications he used to be on before CBD, I highly recommend that this should be available for over the counter medications for people who need it as an alternative as it's completely natural, low dose, and as far as my husband's experience it has been a miracle medicine for him and we hope more people get access to it at an affordable price.

As my husband's experience, as CBD Oil and THC oil not covered by PBS.. we spend a fortune monthly for his dosage

I have a hereditary condition of oesteo arthritis and spurs in all my joints. Very painful. I have had both my knees replaced, my right elbow and just in December 2019, my shoulder and bicep surgery. I stayed in America for a while and used high quality CBD oil and cream and managed to delay my hip surgery and right shoulder surgery because it naturally reduces the pain. It has also reduced my need to go to surgeons for surgery and that delay has saved a lot of money.

I would need to use the cream and oil every day due to my constant pain. It would be so important to my lifestyle to keep the costs low.

It should be easily accessed here and doctors should be allowed to suggest to patients to use this to reduce pain, anxiety and stress due to the amazing benefits of the helper. When i was using it, overseas, it changed my life and i was smiling again!

I would use CBD in a safe way and read the label and warnings.

cbd oil healed my grandfathers face after tumor removal surgery, it also helps my grandmother sleep at night without dangerous pills, I know others that treat epilepsy, adhd, dementia and other serious illnesses with cbd. All these people used cbd without pharmacist advice as a last resort, after they had no success with prescribed treatment.

Australia is too far behind other countries.
The public majority want legal access to cbd and medical cannabis. The people of Australia deserve safe access to cbd.
People of Australia including sick children, elderly, and the disadvantaged have been forced to buy cbd from the black market for decades, if Australia provided legal access to regulated products like America, it would increase economy, decrease dangerous and illegal markets.

Affordable is important
The current Cbd market is overpriced. Legal cbd must be more affordable or equal to illegal home made cbd.

Whatever America did

I believe that CBD oil should be available. I suffer from degeneration of the lower spine which some days the pain is insane and causes my right leg to not function properly. I have been medically diagnosed with EPI (Exocrine pancreatic insufficiency and there are days where the pain can be so debilitating. I suffer from severe panic attack disorder and am also very sensitive to a lot of medications so pain relief and anxiety relief is hard. Being able to access the CBD safely would I believe help me have a better quality of life.

As a single working mum the price is definitely something THAT needs to be considered. My budget is tight so being cost effective to purchase is a must for me.

I believe I should be able to have access to cost effective safe CBD to alleviate the chronic pain I endure.

Having lived with pain for many years and having serious reactions to nsoids and then experiencing while overseas the dramatic difference medical marijuana made.... to be pain free after decades of suffering was not just life changing but it has made me a advocate of for the legalisation of what is after all just a God given plant which has numerous other benefits besides the health ones!

I don't want to break the law here in Australia but if Med/Marijuana was available at a price I could afford it would become my daily medicine...I cannot afford it at the moment.

CBD by itself I am sure would have it's benefit's but without some THC I'm not sure it would work for my condition of extreme arthritis.

I would use CBD in a safe way and read the label and warnings.

I have constant low grade joint pain in my right knee, 20 years after knee reconstruction. From time to time it becomes swollen and very uncomfortable. My Dr has prescribed Panadol Osteo, 6 tabs a day, providing minor relief.

I have been unable to access CBD, but I read stories of it's easy access and benefit for people in other countries.

There is lots of research on CBD freely available from around the world. There is no reason I shouldn't be able to purchase it with my groceries, packaged with quality assurance, like I would expect on a loaf of bread.

Pricing should be market supply driven from quality suppliers including suppliers from Australia, who need only cover production costs equivalent to regular quality, unscheduled health supplements.

I think Australians should be able to access safe CBD oil in the supermarket, just like they can access Hemp Oil.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I believe it should be available to anyone who has a need for it at a reasonable price. To limit how many doses you could buy at a time might reduce the economies of scale which could, over time, reduce the opportunity for some one to be able to purchase. For example, if you can only buy 30 days worth @ \$3.00 a dose that is \$90 a month. If you could purchase a larger amount you could purchase it at a lower price of say \$1.50 a dose and get 90 days worth. \$135 for the larger size. That works out a lot cheaper in the longer term, which some of the less financially stable people would find more affordable. I do believe we, as liberal citizens of Australia, should be given the opportunity to purchase this freely around our nation and not be restricted by red tape. Other nations around the world have the luxury of access that has been denied to us for far too long.

See my above comments.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I know of a number of people who have found relief from pain and sleeplessness using CBD. Personally I think it's a wonderful medicine for specific ailment. I believe that its efficacy is just being truly discovered and there's a wider application for it's actions in healing and harmonising human body systems.

Personally, I would investigate use of CBD if I was in a position of having ailments where it's use is indicated. .

As a cancer patient i truly believe an alternative to medications that screw up your organs ., this cbd oil needs to be made easy to access. Ive had tremendous pain after surgery plus the emtional depression . We need to stand up for this to be legal easy affordable and effective . Its legal in many parts of the world so we need to catch up and help patients get help . Thankyou for trying to do something for the people . Much appreciation .

The cost needs to means tested i feel as a pensioner or dsp recipient cant afford expensive drugs .

Being able to buy this easily like a chemist would ease pressure and lower anxiety .

I would use CBD in a safe way and read the label and warnings.

I would love to see CBD oil made more readily available and continue to help research

I have chronic auto immune conditions which affect my body and also leave me with chronic anxiety etc

I am currently taking CBD prescribed by a doctor for my condition and have had HUGE success with it.

It's seriously changing my life and enabling me to work and live with less pain and my mental health is so much better.

It is very expensive though and we've had to cut back on other essentials to pay for it, but it's become a higher priority as I have been in a few suicidal bouts due to my crippling health.

CBD has pulled me out of that and given me life back.

I'm so glad to finally have something that helps after spending years trying everything under the sun and not having any luck.

It needs to be affordable for everyone who may benefit, I work in a pharmacy and I see many customers suffer because they can't afford the things that could really help change their life.

Would be great to have it stocked in pharmacies at perhaps S3 medications so it is accessed by speaking with a pharmacist who could assess the customers needs.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the “Hybrid” option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD safely without pharmacists advice. I am a chronic pain sufferer and in recent years had a severe pain reaction to an injury. I tried many different pharmaceutical medications including the suite of antidepressants. Nothing seemed to make a difference. I was at the doctors every other day almost begging for an opioid. I have received some CBD oil from a friend and started cautiously on a low-dose. What I experienced was quite remarkable. Whilst it did reduce the pain, it did not take it away completely in this instance. What it did do however, was help me sleep. Sleep when managing the pain–depression cycle is critical.

I have also tried nonpharmaceutical prescribed CBD for pain that was not so extreme to an even greater effect.

The price of CBD oil greatly influences whether or not I would use this for pain relief or for sleep assistance. The price of CBD in Australia is of great importance. People that suffer chronic health issues are often stuck in a cycle of low income and high medical costs – this is my experience. If CBD was at an accessible cost then I would by choice use this over any pharmaceutical.

For the TGA to allow the public to best access CBD perhaps they could set up a vetting site. One where prices can be compared, verified feedback given, and perhaps even access to specialists in pain management, sleep management, etc. I realise this is a big ask but perhaps a 'frequently asked questions' section could be provided for the general public.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A friend was using it for her arthritis and it worked but proved to be expensive. I personally would like to try it for my asthma as I have heard that it can be beneficial for asthma; so far I have not gone down that path as I am trying other complementary alternatives, but am very willing to give it a go. So many of the allopathic medicines come from plants, it is ridiculous not to have this available at a safe, low cost, high quality option. If we can reduce stress, anxiety and other minor ailments with CBD, why wouldn't you? Stress is a major contributor to many more serious conditions, wouldn't it be great to prevent those prophylactically with CBD? The added stress of expensive pharmaceuticals for those who are unable to afford can also be averted. We need to start seriously helping each other and providing safe, affordable, high quality medicines for everyone.

Disregarding whether one has a chronic condition or acute manifestation, obviously the lower the cost the better, especially if one is on a very low income. Generally, having a low socio economic background can impact your health more and having low cost CBD would be a financial relief. Higher pricing can put it right out of range for a majority of the population which kind of defeats the purpose of proffering help through a product if it is unaffordable.

Through any qualified health care professional - doctor/psychologist, pharmacist/chemist, complementary therapist such as naturopath, herbalist/health store.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have many friends living internationally in legal jurisdictions where cbd is freely and legally available. It has improved the quality of their lives in living with pain, anxiety and sleep disorders. I would like these options to be available to me and to all Australians who may benefit from cbd treatment. I have not used cbd oil due to living in Australia, but I would be interested in trying it to treat my anxiety.

I would be willing to pay higher prices for cbd products to see if they would help me with anxiety, even if it means a tighter budget in other areas, because if it does meaningfully help me, it would be worth every cent. However I have the luxury of a decent income and I think any medicine on the market with too high a price tag stands in the way of living in a society where health care is equitable and accessible to all. Therefore I would prefer that the price be as low as possible, as long as this does not compromise the safety of the product.

The public should be able to get cbd oil in the way they get any other drug. It should be available in chemist as well as for online sales.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I was overseas a couple of years ago and I had a severe case of acid reflux. I had to see a doctor. They told me they had a lot of research about CBD and it was good. They gave me liquid CBD and my symptoms went away in a couple of weeks and no sides effects. I believe we have the right to try other ways that work and are healthy and no side effects.

I believe everyone should have access to CBD. Health is a human right not a commodity.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety.

I would use CBD in a safe way and read the label and warnings.

I was fortunate enough to be able to try CBD oil (not through a pharmacist) for a 6 month period to assist with pain from Osteoarthritis (Hips) and Sciatica and residual pain from a pelvic mesh insertion and removal. It greatly helped me with both pain and mobility. There were no side effects. Unfortunately I have been unable to secure further supply and have been without the CBD oil for about a month. This has greatly reduces my mobility and ability to perform basic household tasks and I am experiencing greater pain.

Yes it is extremely important. Personally I would be unable to afford the \$250-300 per bottle (1 months supply). it is currently going for. I am sure I am not alone.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to use it for sleep. I have an auto-immune disease and it will help me to sleep. If I can sleep well my body will heal and repair properly. I would also like to use it for back and neck pain as a result of an old injury from a car accident.

The price is critical. If it is a lower price we will be able to afford to buy it. Don't allow high CBD prices make it a product only for an exclusive few who can afford it. Otherwise families will forgo other essentials just to buy CBD for their chronically ill children.

If reputable brands who have high quality standards develop CBD based on existing research to be sold via a healthcare practitioner recommendation through pharmacy, health food stores and through private healthcare clinics. i.e. naturopaths, nutritionists, integrative doctors who are educated in medicinal CBD. Super-market doctors who work purely work via medicare rebates and over prescribe medications because they are not educated enough in integrative nutrition are not the ideal prescriber unless they undertake a CBD course.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I personally have not used CBD oil before but have witnessed very good, positive health results in some people who have used it. I would like the opportunity to use CBD oil in the future if needed, without being judged for my choice to do so.

I don't think any Australia should be disadvantaged by a high price to purchase CBD oil in order to be able to access something that may give them relief of symptoms, and improve their quality of life. I support lower prices for CBD oil for everyone.

I don't support having no controls for CBD oil access, but to deny Australians the right to access a medication/substance through a reasonable option (Option C) and at a low price is not helpful or therapeutic - people should be fully informed and autonomous in choosing to use CBD.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD but have read enough to consider it is a useful and harmless supplement that seems to help many conditions that do not always respond well to pharmaceutical drugs. I would like to use it for pain and anxiety as using drugs becomes habit forming and effects diminish with time. Drugs also can have severe side effects. If CBD was more readily available there would probably be less drug overdoses from using marijuana with its' dangerous and mind destroying effects

Of course price is important. Health issues are not often accompanied by wealth and CBD should be available for those who do not have unlimited access to funds.

General practitioners, qualified naturopaths and other qualified health practitioners should be able to prescribe this. I would like to have the choice of using this instead of pharmaceutical drugs or standard painkillers. Many allopathically trained doctors have become integrative doctors after seeing the harm, or lack of improvement of patients on conventional drugs.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have safely used CBD to improve my sleep cycle, I began on a small dose and worked my way up to what felt right for me. Because of this my overall well-being has improved greatly. The proposed change would be a huge help in opening up better and safer access to regulated, higher quality products. As well as allowing people to gain better information on the product via packaging or a pharmacist if they feel like they need to.

Lower prices would make CBD vastly more accessible. Currently in the United States low dosage CBD is around \$30US and in Europe around the same at 25EU. Whilst the underground Australian market entry level price point is usually around \$150 for low dosage CBD.

If a similar competitive marketplace existed in Australia for CBD, we could ensure people were getting good quality products without getting ripped off. This would also make it significantly more accessible, as people who wish to take it can actually afford to.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

To be able to use a natural and effective treatment for Pain without all the side effects, (my sister has chronic back and neck pain) and gets sick on pharmaceutical medication but has no other option. CBD oil would greatly benefit her!

Myself and my partner suffer from insomnia as we are very light sleepers also, my partner uses over the counter sleeping tablets - they work but are not natural, CBD oil would be gentle and effective to get a good nights rest..

Lower prices make it more affordable so everyone can use and benefit from it. Make it accessible for everyone, so you dont break the law and so not just the rich can afford it.

Less suicides.
Less people breaking the law.
Happier People!
Win Win

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a health professional of 37 years in various fields I have heard many antidotal reports of CBD assisting people with anxiety, chronic insomnia, headaches, general and arthritic pain.. That is has been more effective than pharmaceutical products and was with out adverse reactions. In fact most stories were from people who were on increasing doses of medications which had not helped or had led to side effects impacting on their capacity to function normally. The pharmaceuticals had had negative impacts on their mental health, relationships and ability to function at work. They were often desperate and researched CBD trying it as a last resort ..In nearly all cases it was effective, safe and people reported that they felt they had their life back and were better than " normal" , with improved resilience, well being and resolution of symptoms. In the small minority that didn't continue it was generally due to it having no effect and excessive worry about using an illegal substance [not adverse reactions]. I have lived with severe menopausal symptoms for 8 years including chronic insomnia, anxiety, chronic headaches, joint pain, IBS type symptoms and hot flushes... I have tried bio-identical hormone replacement- cream, troche and pessary with adverse reactions leading to the cessation of medication. I have declined sedatives as I don't want to be dependent and have used an integrated medicine approach including naturopathy, life style and diet... this means I don't drink alcohol, smoke, have any sugar, processed foods, gluten free, eat organic, drink filtered water, meditate daily, practice sleep hygiene and exercise x 3 times weekly. After hearing stories and reading a great deal I would like the opportunity to have access freely and legally to try CBD and assess if this would assist in minimising or alleviating the challenging myriad of symptoms associated with menopause

CBD being cost effective is essential so people from all demographics and socio-economic backgrounds can have access to high quality effective CBD... Otherwise it remains out of the reach for those who may be in the most need, . These may be people with the poorest health status, those with complex health issues and many chronic co-morbidities and whose money barely covers the costs of living. If its affordable and accessible more people may look to it as a healthy

/ natural adjunct to their current management of chronic and debilitating health issues such as anxiety, stress and insomnia.. it may reduce the dependence on medications causing adverse reactions, may reduce the load on a health care system struggling to respond to the ever increasing numbers of people experiencing chronic stress and anxiety. If people can't afford it readily they are less likely to try and have it not work and waste scant financial resources

Good Information, such as whats CBD is effective for, how it differs from cannabis [people using recreationally to get high], its medicinal properties- how it works, what it can be useful for... , best ways to take, starting doses ,areas to be cautious... pathways for access to high quality CBD sources grown and manufactured safely etc How to know what you are accessing and questions to ask a provider and information they should be able to provide a potential client

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used it but i am an amputee and lots and lots of amputees in america are legally allowed to use it for nerve and phantom pain and swear by it. I truly believe pharmasists should be able to sell it over the counter.

I lost my leg and cannot work enough to even feed myself let alone pay for cbd oil. It needs to be cheap so accessible to people like me

There will always be people who will abuse drugs and how you could police that i dont know but anything has to be better than using opioids. I think it should be sold over the counter at a pharmacy with advise from the pharmasists.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

N/A however I am aware of some people that have used it successfully for pain management and chronic illness without side effects.

The potential benefits to a range of health challenges suggest that a broad range of Australians may wish to access CBD and a great many may not be able to afford it if it is priced out of reach to those who fit a lower socioeconomic profile - ironically and well enough documented these Australians can also have significant health challenges.

Where we can achieve a health benefit without harm it is incumbent upon us to do so. Opiates are dangerous and can only really be used under strict supervision and with time limits. We must explore alternatives and plant based products must continue to be explored and utilised.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have met numerous people that have spent years in chronic pain and finally CBD is working for them and giving them quality of life back. They are able to work again and enjoy spending time with their families without pain!

If it is priced high it discriminates against the lower socioeconomic classes that often work longer and more physical rigorous jobs and tend to be the ones in need of CBD in those I've met.

It should be able to be purchased from a complementary health practitioner because they spend more time understanding a patient's holistic and individual needs and it is therefore less likely to be abused by just getting written prescriptions from GPs that don't spend enough quality time in consultations...

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have safely used CBD oil to lower my anxiety and to help me sleep better. I believe it has also helped with overall health and well-being.

I think the price of CBD is important for Australians because we are already struggling to make ends meet with the high prices we are paying for utilities, mortgages, rates, pharmacy products etc. The cost of living has gone through the roof and our wages are going down.

I think the best way for the public to access CBD is via health food stores because it is a nature product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

Many people who need the relief CBD can provide are unable to afford other options, like private clinics and psychology even with medicare rebates. A huge amount of people are on welfare support and deserve access to anxiety, stress and pain medication - which may even help them cope with a job, more hours or otherwise lessen dependency on welfare. It would also help conditions that otherwise can't be medicated, like people with autism/ptsd handling stress and anxiety. All these people deserve an option that doesn't get them high.

CHEAPLY and without stigma

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have attempted to obtain CBD oil for times of infection, however can only source it from overseas.

I think CBD should be accessible to all in all financial situations. Many people suffer from a wide range of chronic health conditions, including chronic pain, stress, insomnia and irritable bowel syndrome (IBS) and it would assist them greatly.

CBD should be available to all people freely. CBD is freely available in jurisdictions including many European countries and the US, where there is a good track record of safety and effectiveness. The TGA should draw on this readily available information to make their decision.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I am currently on 2 types of medicinal cannabis. I could afford these when I had a job, but, due to covid-19. I no longer have a job. Ironically, I was only able to work because of medicinal cannabis working to ease my fibromyalgia symptoms. I have been on other fibro drugs, but nothing works as well for me, as medicinal cannabis oil. I think it would help so many people just to be able to access CBD from the pharmacy to try for their medical conditions, or, just their everyday symptoms.

so many people would benefit. It is currently difficult to access...esp for the elderly, who may not be computer savvy & they are the people who could often benefit from CBD, for mild arthritis pain etc

pharmacy

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

We have not used it, however as I have previously ticked, I would use it to improve mild health issues like stress reduction to help me sleep and having had IBS for several I would use it when needed to treat that. I have a family member who has fibromyalgia and CFS and CBD oil could ease pain and provide relief from symptoms. Help her have a healthier sleeping routine and improve her overall wellbeing, She also suffers anxiety that could be helped too.

If you are someone who has tried everything and CBD helps then why not. CBD I believe it is more natural as it comes directly from a plant and not a chemically made drug. We need more options for the things it can help with. It also can address so many mild ailments it has dual purposes. Rather than taking one drug to help with stress/anxiety and another to help you sleep, CBD could help with it all. Therefore reduces the effects of the liver and reduces costs. Higher costs would not be ideal for my family member who is unable to work and would not be able to afford expensive medication for her illnesses.

Keep the cost reasonable and accessible to all.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oil whilst travelling in Europe where it is available at pharmacies and health food shops. I spoke briefly with the assistant who instructed me how to use it and to start off on a low dose. It made a huge difference to my osteoarthritis of the knees making it possible to walk without pain whilst on holidays. I would love to continue using CBD oil for this and other minor illnesses. I am also a trained alternative health practitioner so am well versed in herbal medicines. Would prefer that was made available for prescribing by alternate health practitioners as it falls neatly under their modality.

I would like to see it priced reasonably so that it is given the respect it deserves as a potent medicine. Prices should be kept at a level that it is affordable for most people who need it but not too low that it doesn't seem credible.

Public access to CBD products should be through trained healthcare practitioners. People who are well versed in herbal medicines like Naturopaths and Herbalists. It should not be freely available on pharmacy shelves but should be prescribed after careful case histories are taken.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I would use CBD in a safe way and read the label and warnings.

I am a pharmacist with no personal requirement for CBD, but see many patients who could benefit from this product

Price usually settles as supply and demand in the market fluctuates. Initially price would be 'high', but I believe because of interest and demand, the price will become lower.

The best way for public access to CBD, initially, via professional, pharmacist only, to manage possible misuse etc. And maybe relax scheduling in the future.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I use it for helping with sleep. I've had other friends using it for pain relief. None of us have had any problems with it.

I have a friend with MS who was prescribed CBD to help with same. He is on a pension. The consultation was \$80 for 10 minutes & 25 ml of CBD (it was messy for him to use) cost him \$212 which is hard to afford on a pension. He was part of a clinical trial.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't used CBD but if it was readily available, I would try it to alleviate symptoms. I would like the freedom to try to see if it helps me, and if it didn't I would simply stop using it. I would use it until my symptoms went away and then I'd stop.

I have had longtime issues with having an irritable digestive system that doctors can't help as well as stress and anxiety and I would love to be able to try it myself, it is my right to. Everybody has heard of cannabis oil now.

At a high price like \$800 I simply couldn't afford it as I am old age pensioner, I'll be 77 soon. I've heard it is currently about \$800 a month and that is half of my entire income. If it were closer to \$30-50 a month I could afford to try it and keep on using it if it really helped me with my issues.

It seems unreasonable to not allow it to be used, especially if it has mostly good effects and few bad effects. I have not really ever used cannabis before except a puff once and I choked on it, I want to be able to just buy it in a store. I would prefer to buy it as a liquid or capsule.

It would be easier and cheaper for me to buy when I go shopping, I don't need to talk to a Pharmacist, But I would tell the doctor if I were using it.

Only publish my submission on the TGA website with confidential information redacted. Email address. Everything else is ok.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I don't personally need CBD but my partner is from the US and she has used it to manage mild anxiety in combination with seeing a therapist. It's safe, used in small doses and in America you can access it easily at many stores which just makes it easier to manage day to day

A lower cost readily available CBD to manage mild anxiety would be beneficial. Like anything if it's too expensive people are less likely to access the benefits of it

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I am a hydrocephalus patient with slit ventricle syndrome, who, after a lengthy process has gained access to medical CBD oil. The oil helps with my chronic headaches immensely and is simply put a better alternative to highly addictive opiates and other pain killers.

Currently I pay roughly \$500 for my medical CBD oil through pharmacies which are licensed. This isn't sustainable for such a mild, easily accessible and widely applicable medicine.

Needingn anything more than a prescription from your GP for CBD oil seems very counterintuitive considering much more dangerous (CBD is not even potentially lethal) medicines such as valium and endone can be acquired easily.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

As an ex-nurse in a teaching hospital in the UK, I have witnessed many patients suffer on medication that was ineffective, with potential side effects. Had CBD been available, I am sure if they had the option of feeling more comfortable, both physically and emotionally, many would have taken the option. It's about their health and their pain, after all.

I think if people are in pain and need this, it should be made available at a reasonable cost.

Access via their GPs for a 6 month long prescription.

Do not publish my name or my submission on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My grandmother was recently diagnosed with Alzheimer's but also suffers from terrible arthritis, this is a practical and safe way for her to get the pain relief she deserves. This is just one example.

The higher the cost, the less accessible it will be. It needs to be affordable so that people can access and use it, otherwise this whole process will be irrelevant.

It should be readily available for purchase over the counter at the local grocery store.

Only publish my submission on the TGA website with confidential information redacted. Do not publish personal anecdotes

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose, nothing at this time.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I ALWAYS read warning labels issued AND do additional research online before I take any medication or supplement whether prescribed or otherwise..

I have personally known of many people suffering various chronic illnesses (usually involving pain) who have used quality cannabis for medical reasons and achieved safe and effective results that were far superior to opiod prescription painkillers. They have also reported improved sleep and reduced anxiety as an added benefit..

I also know of one person who was eventually approved for "medical cannabis" (a pharmaceutical version not a natural version) and found the cost significantly higher AND the benefits significantly lower, I personally have been prescribed low-dose morphine, gabapentin and anti-depressant Endep (at different times - not together) for a mystery chronic cough of more that 20 years. Cause remains undiagnosed despite extensive testing. Endep had the most significant impact but was very short lived, and withing 10 days the benefit had disappeared but the side-effects were intolerable - eventually proving useless, (Morphine had virtually no impact and both my GP and my Naturopath recommended against the Gabapentin after it was prescribed by a specialist - on the recommendation of an overseas consulting specialist) CBD might be another safe option that I can try - although even it if were available over the counter I would probably still only do it under the guidance of my Naturopath or GP..

If the product is too expensive it will put it out of the reach of many of those who could benefit from it.

Many people who suffer chronic pain can already be financially disadvantaged just because of their illness (ie: by not being able to work full time or possibly even work at all.) Having access to a product that can resolve their pain cost-effectively (and without the risk of addiction) has a multiple benefits - it improves their pain and enables them to participate in the workforce again and re-engage in "life" again which has economic benefits as well as benefits to their lifestyle and mental health.

I think CBD should be freely available (over the counter) at a suitable therapeutic dose (albeit with strict controls on quality standards and allowable excipients), but higher dosages should be available as either "Practitioner only" or under prescription for use under supervision by a Naturopath or GP for more chronic or serious health conditions.

I have personally done quite a lot of research in relation to CBD and even cannabis (which contains low-dose therapeutic levels of THC) for therapeutic use and when prepared and used appropriately it appears to be highly effective and extremely safe, and unlike prescription opioid painkillers it is non-addictive.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I would like to try CBD for mild pain relief of a sciatica flare up I get every month.

If CBD were at a higher price point, I would save up to purchase one product and use it, and probably have to wait a while between products. If CBD were at a lower price point, I would probably use a combination of 2-3 items

If the price is lower, Australians will be able to use it more regularly, thus taking part in economic Australia.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

Was diagnosed as an "emigma" post liver transplant complications and given a "terminal" prognosis. Used Elixinol 3600mg cbd and would not be alive today much to the surprise of medical staff and specialists. Have documentation and pictures to prove claim.

Cbd is a natural grown product with price is only dictated by legislative restrictions. Reduce the restrictions and the price would and should be negligible.

Let us grow it ourselves.

I would use CBD in a safe way and read the label and warnings.

I believe every person has the right to greater options and choice to try as many strategies and possible remedies and supports as are available. I believe that what works for one person may not work for another, and therefore restrictions based on requiring evidence that most people will find improvement in conditions is flawed. It suggests that, if a remedy only helps a small percentage of users - not enough to note a significant percentage of people seeing improvement with use, that the health and wellbeing of the minority who do see improvement and usefulness are not significantly important enough to allow it's availability and for it to be easily accessible. It suggests that your decision in this matter is based on the flawed principles that a remedy must either help the majority or no one at all. Restrictions that have no basis in independent peer-reviewed research to say that they are dangerous, and that encroaches on a person's freedom of choice and their ability to try and help themselves in their own way is an infringement on human rights and freedom.

I believe that price should be fair.

CBD should be widely available, however it should be required to meet quality standards

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I believe it's a human right to choose and to treat any condition with a natural or a conventional remedy...extremely good for joint pain , period pain inflammation. It should be the individual's choice

Affordability is essential to this being available if you make just another product that can't be accessed It should be available to everyone to make their choice whether or not they want to use this product, there should be a range of doses that individuals can try.. we have a range of product as long as they are informed of the benefits/effects

Information and education and individual choice

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because I have seen its effectiveness for several of my patients (I am a GP) and for my own family members, particularly my elderly parents who have used CBD for pain and sleep. At present the cost of CBD puts it out of reach of many people who could be benefiting from its use, particularly where alternatives have unwanted side effects, such as opioids and benzodiazepines.

Yes - I believe lower dose CBD will give many more people access to this often very effective medicine for pain, anxiety, sleep, etc. The current options for prescription medications are often addictive, dangerous, not sustainable and sometimes ineffective.

Through pharmacies with some guidance from their doctor and with a lot of clear information available with the product itself regarding starting low and increasing gradually, and dose ranges for expected effect, as well as any contraindications, such as interaction with a small number of medications they might already be taking.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I just read an article in The Beacon - The Breast Cancer Magazine. I was unable to have treatment post Breast Cancer Surgery as i have a Rare Blood condition & feel this could have supported & helped me with so many issues as well as Anxiety & Panic attacks.

Of course lower prices would help those who would benefit

Our Pharmacist knows the drugs we are required to take

I would use CBD in a safe way and read the label and warnings.

My partner was diagnosed with an illness and was lucky enough to try CBD to help anxiety and sleeplessness. It calmed him. With an aging population that are living longer, they are sensible and require better quality of life naturally rather than taking medication with side effects.

Affordable CBD could provide help for struggling people as when you are not well and you go for endless tests etc it is expensive and upsetting. Medicare does not pay enough for Scans, Xrays etc when outside the public system which does not leave much money left in the pocket to spend. Affordable CBD helps calm the patient and access his health situation with a clearer head and often benefits his health in a natural way.

Do not publish my name or my submission on the TGA website.

I have an autoimmune disease of inflammatory arthritis, Mainly affecting my digits and toes, but also sacroileac area. It is absolutely crippling when in a flare up. All basic medications and prescriptions do NOTHING to relieve the pain. My next steps are dangerous pharmaceuticals with major side effects which I refuse to take. Currently under control with dietary management. I need to have the choice to try less harmful products. My mother is the same.

As long as it worked, but ideally lower priced.

Doctor? Health care professionals such as naturopaths, chiro's etc

Ever since i was 9 years old I've had social anxiety. Tasks like going to the shops could be difficult, even if i feel a little unwell my anxiety will make it worse. It dramatically impacted me when i was in High school. I was put on medication but stopped due to the fear of side effects. I feel people should have the option to use CBD based medications as it has less side effects and is the more natural option. Having a variety of options to treat a variety of issues is important as it gives the people more power to the way they can address the certain issue.

I would use CBD in a safe way and read the label and warnings.

I do not use this product myself, but as a psychologist I have several clients who do and claim benefits for pain relief, anxiety and stress, without the side effects of pharmaceutical prescription drugs. I know that WA University has recently completed studies of the use for insomnia which were successful and there are on-going studies for pain relief. I have clients who are allergic to opioid based medicines and their pain relief choices are very limited.

clients whom I see are often in the lower income brackets or are veterans on a pension

I would hope that clients do not have to see the pharmacist on a daily basis as in some rehabilitation prescriptions, but see it as a monthly or three monthly prescription - perhaps over the counter in some instances such as proven chronic pain, or Veterans with diagnosed PTSD symptoms (includes Emergency Services personnel).

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because based on research to date I feel it would greatly improve the quality of life for such a wide number of people suffering from such common ailments such as stress, mild anxiety and occasional insomnia.

I feel that while it is important to make it affordable, it also needs to be priced at an adequate level to improve chances that it will be valued higher by the public.

I also believe if a high-quality, hybrid-control system was to be introduced for available CBD, that a wide range of practitioners should also have access to guide patients in its use - e.g., complementary medicine practitioners who are with e.g., AHPRA or a TGA exempt self-regulating association (Schedule 1, attachment 2).

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Thursday, 21 May 2020 4:41:27 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I think that CBD would be a good choice for myself, who have had undesirable side effects to medication, and am have no had any success with my treatment for depression. I would like access to CBD for myself, and members of my family with gastrointestinal problems, problems with depression, problems with sleep, and anxiety. Although I would like there to be restrictions on CBD, I think the risk of serious harm is low, and I think that restrictions should be put in place only if and when problems with inappropriate use arises, rather than the assumption that people cannot make educated decisions about the appropriate and safe usage of the product with the right information.

The high price of CBD has made it completely inaccessible to our family. It is important that people of different socioeconomic backgrounds are given the same opportunity to pursue different treatment methods which could improve their lives for the better, as well as lowering the burden on our health system as milder forms of disease can be more easily treated.

I think that CBD should be required to have safety information, and correct usage enclosed or attached to their packaging.

Only publish my submission on the TGA website with confidential information redacted. My name or any identifying details like the state where I live. I don't have a common name.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

100%hemp oil has reduced my sons Touretts symptoms about 95%. 2 drops placed on the back of his neck twice daily has reduce my son's symptoms in a life-changing miraculous way! This oil needs to be available to anyone who may benefit to use it!

A healing miracle oil like hemp oil needs to be available to everyone. It improves lives that's what it does!

It should be as easily available is chewing gum is or as panadol is.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Visited family in UK in 2019. CBD oil is readily available in both UK & Europe. Friends & family report use safe & effective to help manage their health conditions & improve their quality of life. No issues raised & they had not heard of anyone having a negative effect. All would be distressed if they didn't have access to it.

CBD appears to be safe & effective for multiple conditions. People should be able to try it & it should be affordable for everyone, particularly if it results in needing less pharmaceuticals.

the key to safety as with all medications, herbs & nutritional supplements is that people feel comfortable discussing their choices & experiences with their GP without fear of judgement or prejudice.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Unable to access CBD currently so unable to answer that

Higher prices would make it inaccessible to people who really need it

Dispensaries like in the US. They sell CBD at gas stations, Australia is behind and reluctant in any kind of remedy to stress reduction that isn't benzos, alcohol, or heavy medication.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I don't have a personal story only stories of others using CBD safely and with success for their health conditions thus would like to have access to it as a Naturopath for prescribing. It could be beneficial as another natural medicine in the tool box to assist clients where other medicines haven't, have proven to be either inefficient or the client is intolerant to it ie. a pharmaceutical drug. I believe in choice that is affordable for every human that is suffering.

If the price is higher then less people can afford the medicine, unfair. As a practitioner I know that many ill people have more than their fair share of costly medicines and often a lack of funds due to their illness becoming impossible for them to earn an income or continue to earn the income they once had. All Australians deserve affordable health care and appropriately priced medications.

If the CBD was to be manufactured by a well recognised professional herbal medicine company, then as a Naturopath I would be more likely to purchase from them. 20 years of experience using products from the best Australian herbal company has shown me to see how thoraly they research, source and use the finest uncontaminated raw material, then process, batch test for purest end product and back it with professional education which is ongoing via clinical trials. Thus I believe Naturopaths and Herbal medicine practitioners who document and file their prescriptions and consequences of treatment protocols should be a primary prescriber of CBD for it to remain a safe and non abused product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I had an accident when I was 15 I am now 61 I have had chronic pain on my right side headaches arm back and right hip and leg pain I suffer from constipation and anxiety and PTSD from Sexual Abuse and rape also. I have been to every practitioner for 40 years medical and alternative, had years of therapy studied and practiced yoga and meditation. I am still in pain all the time. I have worked as a Registered Nurse for 44 years and still working however I am very tired and in so much pain. I would like to have some relief. I do not take opioids or any other long term medications

I am not phased at present with the price as long as it is not more than \$100 per month as I am still working and can afford that however some disadvantaged people may only be able to afford up to \$40 per month much like prescription medications

Only publish my submission on the TGA website with confidential information redacted. My name address and telephone number

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would be very interested in having the ability to experiment using CBD for several conditions, including back pain and RSI, and to address constant low-level anxiety, and sleep disorders. I have also read very positive studies about CBD and alcoholism, namely it assisting with quitting, and I'd be very interested in experimenting with this also. I have used alcohol heavily over the years to address these conditions, and I'd like to address that pattern of behaviour.

Myself or any loved ones (that I'm aware) have ever had the ability to experience/experiment with CBD only, and I personally am not interested in experimenting with THC containing Cannabis therapeutically, as some experimentation shows that the THC usually just triggers much higher anxiety levels in me. This is obviously counter-productive when seeking anxiety relief, and relief of physical pain.

I believe that affordable medication should be accessible by all people, and as someone who is self-employed and on limited budget higher prices would definitely affect my ability to access CBD.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

MY STORY; My beautiful Mum 89 yo now, has been suffering from quite severe pain from conditions affecting her musculoskeletal system (rheumatoid arthritis and so on). It was very disappointing to try to get CBD through medical system (her GP). We were told that she has to go through Pain Clinics (?) first and then, if nothing else works, she could possible be a candidate. SO she would have to take very harmful painkillers first so that she could be entitled to a safe and harmless plant derived oil? PLEASE WHO IS RESPONSIBLE FOR THESE POLICIES? After Endone my Mum was hallucinating, after too much Osteo Panadol and other drugs (Steroids) my Mum developed dementia. What else would you like me to say?

My Mum and I, her carer, are on low income. I know many other low income Australians. Yes the price is extremely important. It is either affordable or not.

Should be easily accessible because there are no harmful effects. Everyone using any over the counter medication including widely accessible pain medication, have to use common sense and use according to labels.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

A friend who's teenage daughter suffered from chronic epilepsy (we are talking 100+ fits per day) started using CBD oil as they were looking for anything that could help their daughter. 3 days in to taking the oil she had cut her fits by about 3/4's and was sleeping better and more relaxed. it was amazing

We need a reasonable price, Australians need to be able to access the product without having to spend an absolute fortune otherwise it will deter alot of the population. But people need to be realistic, when you are getting a pure CBD product and not synthetic, it will cost you more then 10-15\$\$

Reduction of risk of known effects of pharmaceuticals and improvement in pain and sleep

Current price of CBD is much too high, compared to other countries. Cost of obtaining permission is excessive, difficult and controls placed prohibitive. It helps with a range of conditions.

The Dutch way works well as does US states like Maryland, Colorado and California. It's even legal all through Canada! And if ACT can be legal why prohibit the in other states!

Australians should be able to access medicinal CBD at a low cost. It should be accessible to everyone. It is immoral that only wealthy people could benefit from it.

BHSc Naturopaths are experts in the field of Herbal Medicine, Botany, Pharmacology and Pharmacognosy and the most qualified practitioners to prescribe CBD to the general public. BHSc Naturopaths are also rigorously trained in pathophysiology, chemistry and biochemistry. No other health professional in Australia has this specific combined knowledge.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not personally tried medicinal grade CBD, I have a close friend who has, and I have seen the positive impact it has had on her health issues and her life, with absolutely no side effects, and certainly no negative affects at all. It has been a god-send for her. If medicinal grade CBD was to become available, it would make such an enormous difference in many of my families lives, who hate to use over the counter synthetic products for their conditions, and so would rather use a natural product such as CBD to support their health. This is why I want medicinal grade CBD to be available too. There are times when my health issues require me to use a product for symptomatic relief. I too, choose to only use natural products on and in my body, due to how sensitive and reactive my body is to synthetics. I can become very unwell from even the most supposeably gentlest of products. When my usual natural products are out of stock, or not available for me to access, I then have to make the decision to resort to the synthetic variety, or put up with the discomfort of not using anything at all. The latter is what I choose, as the discomfort of this is less than I often experience from the taking something synthetic. Having medicinal grade CBD available to me and my family, would simply give us another option at such times like this. Please make this product available for use!!

I think price should reflect the quality and purity of the CBD, and that the quality of the product should be made transparent to the consumers, to give consumers the information they deserve and need in order to chose the right product for them. Unfortunately at the moment, there is a major lack of transparency for a lot of products on the market, and between a lot of competing companies. It's wrong, and it's unethical. It always comes back to the dollar, and it's always about how the company can benefit best, never with the consumers best interest and safety in mind. Consumers that are aware of this, are then forced to have to do the time consuming research themselves, to find the product that they are happy with in regards to quality and cost of the product. It shouldn't be that hard.

I always am happy to pay for quality. I am one of those consumers that does her own research, goes digging into the quality and purity

of the product and the ethics of the company manufacturing it, before i will willingly commit to using it. It always upsets me to discover yet another company that has been misleading with their information on their product. This needs to change, and cost of the product should reflect the true quality and purity of the product, with it also being fully disclosed. That being said, health products such as medicinal grade CBD, also need to be affordable so that most people can access the purest and highest quality, should that be the quality they are looking for. I guess what I am saying, is that the industry needs to be better regulated!

Direct from the manufacturing company which has proven quality procedures in place.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My Mum suffered serious but transient sciatic pain from an accident. If CBD had been available we could have used it to lessen the pain. I have numerous clients (Massage Therapy) who have difficulty sleeping or have mild anxiety and low dose CBD would help when common treatment does not

Many Australians live pay to pay and can't afford high ongoing costs Price is important but quality is more important

The evidence is available, the community wants this because we know it's effective
If it's made available here, the TGA can ensure we get unadulterated, quality product. Schedule it for Pharmacist dispensing

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

In recently travelling through cities incl Amsterdam and Seattle I have spoken with many individuals who use CBD with great and ongoing success for pain relief so this should be permitted for Australians. Our TGA is pretty good at quality control so we should be able to achieve this safely

Like any supplement or medicine the lower the cost to the consumer the better

Making it a TGA listable substance will achieve a balance of good access to the public via complimentary health practitioners and other health professionals with active quality assurance

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I have extensively studied the widely available information from USA and Europe re the application, safety and efficacy of CBD. I think because the ingredients are derived from the 'cannabis' plant family that the fact that CBD products do not have the psychoactive ingredient in any dose for people to get 'high' has not been well known and has been a negative for open minded discussion on CBD benefits. It's time that the product made from a natural plant was made available to the public.

Price is always a big factor when purchasing product like CBD, which to get the best health results means many months of use. Locally produced CBD would offset the higher USD/AUD currency disparity which adds significantly to the cost. However it's up to each individual consumer whether they prefer imported VS local product as price is part of buying decision..

Consumers today have access to the Global marketplace to do product research. Suggest TGA do the same and see how other jurisdictions allow the CBD products to be marketed and then see what components could be applicable in our market..the big issue is to educate people that it is non psychoactive and safe to take..

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I haven't used CBD before, however I have read of its potential benefits for many ailments such as stress, anxiety, skin health and IBS and would be interested in trying it out...as long as it's safe.

If the price was particularly high I don't think I would try it as there are other options available at reasonable prices. If the price was competitive, I would try it. I think the price would be particularly important to Australians with serious medical conditions as the cost of treatments, doctors, medicines etc. are usually costly and all add up. This adds to the stress of the patient, which is not at all helpful to their health.

I would limit it to be available to chemists/pharmacies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I run a busy Naturopathic Practise and see many cancer patients. They report CBD as their best pain option. I am concerned about the way they currently obtain, its quality and their dose understanding.

Pricing provides an interesting conversation. I believe it should be at an accessible price, but not lower enough to affect its value in the eyes of the public. Hopefully the cost of the checks and balances required for its sale will create an ideal price structure.

I believe those prescribing it should be trained and certified.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

Cannabis oil have plenty of scientific proof for cure but not only that, it's a powerful plant that was provided from Earth to help our bodies, it's best that we don't have lab made medicine as it goes against the law of nature. It's best we get our medicine from the right source and that is earth and not mixed with chemicals, just pure. Humans over time need to learn and take responsibility of their own health rather than relying on over the lab medicine. It's time we start listening to our bodies and to stop taking stuff that is not natural. Cannabis is a plant, made from earth not from a lab, it's way more natural. The reason it was banned in the first place is because of it benefits, which in result will effect the pharmaceutical business.

Reasonable price, depends on the quality of the plant oil itself.

Let them so some research. Ask them the question, why is it such a pain to make it legal? To be honest, we should have the right to do what ever we want to our bodies, it's no one else's business.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

We have plenty of research by now how CBD can help with different ailments. In other countries (in the USA , Canada, Europe) people can buy it and it is affordable. It helps countless people , for some its even save their life. In Australia its still out of reach for most people, it is very expensive. Medicinal cannabis can help our veterans, but it is obscenely expensive at over \$800. The government will not pay for it. People have to turn to the black market if they want to get it and that can cause all kinds of problems. We need good quality CBD with measurable doses affordable to everyone in all Australia. NOW....not debates,waiting more years, while CBD could help so many people....even saving lives.

.In Australia CBD is way out of reach for most people, it is extremely expensive. People have to turn to the black market . People cant afford the high prices what is now been charged for legal CBD, especially the ones who are sick and cant work. Even for the veterans who risked their life and battling with PTSD, legal, medical CBD is not subsidised...

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have recently started using CBD oil which was prescribed via the Special Access Scheme, it was to treat mild pain and with some trouble sleeping at night. So far (about 1 month into use) i have had excellent results with a reduction in my pain and lowering of my stress levels plus improvement to my sleeping patterns at night. I was initially concerned that I would feel the CBD oil too much and that it might affect me adversely, but in no way have I felt it affect me adversely nor do I feel that the effects of it are very direct. e.g. no highs/lows etc, no 'drug' like direct feelings. I also feel it has generally improved my mental wellbeing since I started taking it.

I had to go through a doctor and through the special access scheme to get my prescription, the doctors fees were high plus the actual cost of the CBD oil was very high. I'm not sure it is feasible for me to continue using the product at the price its at. Having it available at a lower price would allow me to purchase the oil without having to sacrifice other purchases in my life.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I would like to be able to easily access CBD legally and at a low cost from stores for medicinal purposes. The benefits of CBD for my health and family health are important to me and I think that self reporting the effects and benefits to Australian researchers should be possible so that its benefits are properly considered, documented and shared.

CBD is useful as to help alleviate health problems for all members of the family at all ages so it is important that it remains at low cost and affordable to the average family, particularly those managing chronic illness. These people need safe high quality CBD that is low cost and easily available. Making it a struggle to access CBD for price or restricted access will place considerable stress and burden on most families who have to budget carefully to afford medical supplies..

There is no scientific or medical reason to make 98% pure CBD with no THC restricted, difficult to access or expensive - the WHO has recommended that it does not require a drug status so does not require restriction through pharmacy consultation and many western countries have already made it freely available.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been on a cancer journey which included 7 surgical procedures, chemotherapy and radiation treatment.

My pains are ongoing and the treatments have left me with sleeping difficulties, restless leg syndrome, arthritis, irritable bowel symptoms, stress and anxiety.

I do not like using chemicals or opioids nor do I like the side effects or addictive nature. The use of CBD is so much more gentle, useful, effective and natural. This has worked well for me but the expense and accessibility is crippling not to mention the opportunistic deceitful cohort that provide pseudo rubbish to steal our precious money.

CBD needs to be easily accessible to everyone that chooses to utilise the benefits at the highest quality and standards with realistically low prices.

The lower prices for high quality CBD is very important for all Australians as this enables accessibility for all who need the benefits. Often the people with the greatest need are struggling or compromised financially. The price point could be the greatest hurdle between utilising the CBD oil and being able to return to participating in a more workable active member of society or not.

I believe access to CBD needs to be restricted to pharmacies in an accessible to all manner.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a chronic health condition that causes deep chronic bone pain that all patients with my condition experience. Most pharmaceutical narcotics do not ease the pain very well, are addictive, can be difficult to get prescriptions for, and long term use can cause organ damage. Many pain patients say that CBD has helped to relieve their pain when pharmaceuticals have not. The availability of CBD would help to reduce pain without the addictive nature and damage that pharmaceutical narcotics have.

Lower prices make CBD accessible to all people who need it. Many of those who need it most are very possibly on low incomes as a direct result of health and pain limitations.

CBD should be available via prescription and dispensing by medical practitioners, naturopaths and registered herbalists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a family friend who experiences severe anxiety/OCD as a regular factor of their life, who has also been prescribed SSRI medication before for anxiety and depression to little effect. They told me that their life has been changed by CBD oil, describing it as allowing them to slip back into a normally functioning life with little to no anxiety issues. While they are working to control their OCD with therapy, they have told me that feel a whole world better thanks to CBD.

In addition to my friend I mentioned before, I know someone who has access to CBD through the government because they have a terminal illness. I was a bit shocked to hear how expensive it is for him, and would hope that the price for Australians to access it would plummet once it is introduced to the market.

I am amazed to hear how CBD has positively changed people's lives, for whom physical pain and mental illness has become a crippling daily struggle. It seems absurd to me that something with overwhelmingly positive feedback particularly in the area of mental health has less of a legal status in this country than tobacco. I absolutely believe that people should have access to CBD through the pharmaceutical system, and that it should be provided at an affordable price to Australians.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Date: Thursday, 21 May 2020 2:39:16 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My wife had a severe back pain with 2 bulge discs at only age 25. She was admitted to hospital and was given over 12 doses of different (heavy and dangerous) drugs including morphine, endone, ibuprofen, paracetamol, diazepam, oxycodone and celebrex within a 36 hour period. NONE of these drugs worked effectively to removed the pain. I was surprised when she told me this, but her pain was very obvious and sometimes excruciating.

We are both health practitioners, so we're well aware of more natural products that can help with pain and inflammation including turmeric, devil's claw and CBD. Of these three, CBD had the most potent effect and while it did not take away all pain, it was actually the turning point where she could get out of bed and begin walking to exercise her back and start the healing process. Absolutely amazing. This is far safer and more effective than any drug she was given.

DescrThe current cost of CBD is absurd. Its readily available and is only expensive because of the even more absurd restrictions. Anything that is clinically effective but also cost effective, will always be important for society, especially when it comes to pain management. If something is safe and effective, and the governing body (such as the TGA) refuse to remove heavy restrictions, then this shows a deep level of sociopathy and lack of compassion, which is essential in any civilization.

CBD should be regulated, like any food or medicine, but it should be through FSANZ not the TGA. Limits should apply to dose and concentration for safety, but it should not be sold only as a therapeutic good. It is the oil extract of a plant, with very little safety concerns. Should olive oil be listed as a medicine? How about omega3 oils? Absurd.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal

information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I find clients independently source this product. Therefore I have not control over recommending suitability and dosage. I have however heard numerous positive reports on the effectiveness and safety. Including very elderly who dislike the side effects of opioids yet find cbd to be suitable for back pain and arthritic joints.

In my own experience elderly clients on pensions would utilise for aches and pains if affordable.

I think it should be made accessible to everyone -a pharmacist or other healthcare professional to advise on use to avoid any pharmacodynamic interactions.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

My daughter in law has been taking CBD oil for some time for the relief of IBS and gluten intolerance with great success. She suggested I try this oil for the relief of stress and general well being. I was impressed with the results. However it is very expensive and the company supplying the good quality oil were closed down by authorities. Unbelievable!

I am a pensioner and find the price of the good quality CBD oil to be out of reach.

Should the oil become available to Australians, legally, I feel it would be cheaper.

i feel the oil should be available to the general public but only through controlled distribution. None of this back door shit. I suggest pharmacies and health for stores only. No supermarkets. I have the same belief for vitamin, mineral and herbal supplies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would use CBD in a safe way and read the label and warnings.

The CBD produced by Young Living in the USA contains no THC whatsoever, it would be impossible with the plant origins used. It is important that CBD is produced on very clean ground, i.e. no toxins whatsoever. The hemp plant absorbs toxins from the soil so those toxins would be passed on to users. Young Living is only produced on organic ground. Though Young Living is distributed in Australia, so far it has not been able to have their CBD here. Please make this possible.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I LIVE IN NTH QLD AND CURRENTLY DO NOT SUPPLY ANY CBD, I HAVE HEARD PLENTY OF PEOPLE TELL ME THEIR GAINS AND RELIEF FROM TRYING IT, AND FOR THEIR CHRONIC CONDITIONS, IF THEY HAVE NOT SEEN RELIEF FROM REGULAR S3,S4 OR S8 TGA APPROVED MEDICATIONS, THEN WHY WOULDN'T I WANT THIS HYBRID EFFECT TO BE SUCCESSFUL.. I DON'T BELIEVE THAT PHARMACISTS SHOULD BE THE ONLY AVENUE, BUT I DO BELIEVE THAT SOMETIMES OTHER AVENUES OF ITEMS LIKE CBD MAY TEND TO BE SOMEWHAT UNTRUSTWORTHY IN THE SENSE OF THE QUALITY OF THE PRODUCT. SO FILTERING IT ONLY THROUGH MAINSTREAM SUPPLIERS (WITHOUT INCLUDING SUPPLIERS LIKE COLES AND WOOLWORTHS THAT BEHAVE UNETHICALLY) THEN I BELIEVE YOU COULD ACHIEVE A GREAT MODEL OF SUPPLY

I FEEL IN THIS RETAIL CLIMATE AND REGULATION WITHIN THE PHARMACY SECTOR, I BELIEVE IT SHOULD BE KEPT LOW-ISH... IF ITEMS ARE PRICED HIGH AND ARE A HIGHLY DESIRABLE PRODUCT BY THE MEMBERS OF THE COMMUNITY, THEN THIS PUTS PRESSURE ONTO THAT ITEM IN REGARDS TO THE SAFETY OF THE STORES THAT CHOOSE TO STOCK IT. AN INCREASE IN VIOLENCE AND WILFUL DAMAGE TO THESE PLACES MAY BE SEEN.

I STILL FEEL IT HAS TO BE REGULATED SOMEWHAT... BUT THE BEST WAY, I AM NOT 100% SURE HOW. DON'T MAKE IT TOO EASY TO GET, BUT THEN DON'T MAKE IT DIFFICULT FOR THOSE WHO MAY NOT OBTAIN IT EASILY BUT ARE POTENTIALLY PATIENTS IN NEED.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My mum suffers a lot of pain with Fibromyalgia, Rheumatoid Arthritis, Osteoporosis, and Sjorgens disease - there has been many accounts of people in the USA and Canada who've used CBD oil to help with pain relieve successfully, and so I think it would be great for her. I also have a spinal injury and thought it may help with pain relief, I think it should be readily available to the general public without the need for a prescription, this will help people take charge of their own health and hopefully get some people off of addictive pain meds and potentially other medications if research find that it can assist with that. The more we can empower people to take responsibility of their own health, the more pressure it can take off the healthcare system that's already stretched and leave our doctors more readily available to help those with serious illnesses.

My mum lives on her own, some days she can't get out of bed due to pain, she struggles to find work because of this which means she has little money - if this was lower cost, she could get pain relief and hopefully get a full time job. All of this effects her mental health as well as her physical health - it's a win win situation.

I think having it available through a pharmacy, health food store, and by health practitioners - making it like some pain relief whereby the person buying needs to provide their information so that it can be tracked - this could be used to gather helpful data on the benefits these people are getting from the use of the CBD oil.

Only publish my submission on the TGA website with confidential information redacted. Do not publish my name or email address

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

None of my family have used CBD oil, however my husband's 93 year old grandmother has stage 4 breast cancer (which she has had for 8 years) and is now in a lot of pain. She is not willing to try CBD while it is not legal, however I feel it could help her and improve her remaining quality of life. I also have a very dear friend who has had Rheumatoid Arthritis for 18 years, struggling on until two years ago when she finally had to go on disability benefit. She would prefer to work, if CBD oil were legal it may help her with her pain and mean she could return to work, which would improve her mental health.

Lower prices for CBD obviously means wider availability, most people needing this are already on disability benefits etc and could not afford another health expense. It is obvious to me that lower cost would benefit more people.

I personally feel it is ridiculous that a natural product which has a large body of research behind it for its safety is being scrutinised in this way. If only there was more scrutiny like this for Pharmaceutical products, maybe we would have less health problems in the first place!

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As Naturopath, it is important to be able to prescribe various natural herbs and supplements for various health condition, ranging from insomnia, mild pain, stress and anxiety. Enough research has been done to safely prescribe CBD.

The cost of health care can already be extremely high for some. If the costs of CBD is too high, then this can limit it use to those who have the financial resources to purchase it. It should be available for all.

In my opinion, the best option for CBD is either through a Doctor's prescription, or another health care practitioner like a Naturopath. To have it over the counter could mean that people could take it, together with other prescribed medications that it could possibly be contraindicated with.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have personally used organic CBD oil to assist with my mild anxiety, which in turn affected my sleep. Safely, consuming CBD oil over a period of time, I noticed a huge difference in my sleep and my body's ability to adapt to stress and manage the symptoms better.

My friend has fibromyalgia and I suggested she look into CBD oil as a way of managing her pain. She has informed me that she notices a huge difference when she takes it intermittently compared to when she doesn't take it at all.

Any proposed change to the availability and access to CBD oil for practitioners will significantly assist in better patient outcomes where certain symptoms are associated with stress, anxiety, poor sleep and pain. It will also provide a more natural approach to treatment compared to medications prescribed by their medical practitioner.

Better access to healthcare or health care products is one thing but making them affordable is just as important because it means better adherence to treatment protocols as set by their health practitioner resulting in better health outcomes for the patient.

People who currently use CBD oil will find a way of purchasing regardless of the views of the government or TGA. As the market continues to grow (legally) in the USA, Australian's will continue to access product from there, if they don't already have a medical prescription. Therefore, there is no better time to allow better, local access to CBD oil which can be controlled more easily and efficiently within the country.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

no experience with CBD, either privately or professionally.

no effect to me personally. price of CBD would be a determining factor for a lot of people, especially those who struggle with adverse health conditions and living circumstances.

would prefer it to be sold only in places where knowledgeable assistance is available at any given time. not keen on any medications being sold in supermarkets.

I would use CBD in a safe way and read the label and warnings.

I have just been diagnosed with RA and suffer with digestive issues most of my life. I would 100% prefer to treat pain/illnesses etc with natural products like CBD than widely overused pharmacy pain medication. There are so many side effects for everything and I feel like medication destroys you gut health which in turn causes more medical issues. Use what comes from the earth, not from a lab in my opinion

I feel like if the prices are put too high it will prevent the majority of people from being able to access it, especially on a long term basis.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Several years ago when in depression and suicidal, I used CBD from overseas as there was none available here. I tried antidepressants over many years prior to this but they didn't help. The oil did quite quickly. At this point I understand Depression and Anxiety are not included in able to procure CBD in Australia. Those I know using it seem to be paying much more than I did importing it. I used CBD that was organic, easy to get, and in amounts that meant I could get discounts. As everyone's body is different....size, metabolism and health problem, I would not want to be restricted in amount I could purchase. I also check out possible health remedies. I now have Lupus and it seems it may be helpful.

I just noticed your note below but am fed up with it being dismissed for depression. It worked better than other medication with less side effects. My doctors and Psychologists knew I was taking this.

DescrI am an Aged Pensioner living below the poverty line as don't have assets, Super, or savings, so have not been able to purchase oil for a couple years and have noticed the different.

I would use CBD in a safe way and read the label and warnings.

I suffer back pain, muscle tension and stress and would welcome the ability to access a non addictive medication that relieves stress and pain without the kinds of side serious effects that opiates, NSAIDS and Anti-depressants have.

The price of CBD is a critical factor it needs to be as affordable as viable for it to be used in place of cheaper medicine with significant side effects

Public legal access to CBD is a move forward for all of us, there are many situations where it is an effective medicine. Of the options I prefer the Hybrid suggestion, however if any of them get implemented rapidly, that will be great and provide many people with other options to try for pain and stress

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I have been using hemp seed oil and hemp protein powder for years with, I believe, positive outcomes. I privately researched information on hemp and hemp products before starting this. Note: I have never tried cannabis in any form and have no wish to do so but I believe the public should have free access to this natural and beneficial product without involving TGA or Pharmaceutical companies.

Regulation increases prices, when, in my understanding CBD is much less harmful than other medications sold over the counter. I feel that the public are becoming more aware of the difference between CBD and THC. CBD is also freely available in many other countries.

The public should be able to access CBD in much the same way as paracetamols or aspirins or cigarettes.

Yes I know several people who have used CBD for health reasons with very good results. I believe this is a natural plant and that we have an Endocannabinoid System for a reason. We need CBD to function properly. It may even be that the lack of supplying our endocannabinoid system with what it needs has contributed to the explosion of chronic disease. Approximately 80-100 years ago CBD was taken off the market due to a scare tactic campaign. I know people in other countries where it is completely legal have used CBD with fantastic results! Looking at Canada, nothing has changed with the legalization there. The country has not turned into a bunch of potheads. With the change in Scheduling maybe I can afford CBD for health issues. It is atrociously and prohibitively expensive now.

DescrAs mentioned the price now is WAY TOO HIGH! Bringing down the cost to the consumer will only benefit the people who need it most, myself included. Definitely the price is important. We need our own local industry in more ways than one. We are seeing how relying on overseas companies is a risky business. We need our own industry to help employ people, say and control what types of product we want, improve our soil, create a hemp fabric industry and the list goes on. We have a great climate for the growing of it.

We need as many retailers as we can whether this be a Doctor, chemist or gov't or private stores. I have been in gov't and private stores in Canada and the information the staff has is enormous. They can tell you everything inside out and backwards about all their products. It's only in everyone's best interest that people selling these products know their products and what they can do for a person.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I currently take CBD dominant Medical cannabis for my immune system and to manage pain.. I also take a CBD/THC compounded medical cannabis in the evenings for a restful sleep and to ease my arthritic pain. I would love to be able to obtain my supply at an affordable price as its a natural plant and works on our endocrine system, helping to restore healthy cells. I have many problems and side affects with conventional medical prescriptions. In fact I got very sick and ended up in hospital after taking prescribed medicines. That is why I turned to Cannabis.. My health has improved and I do not suffer the pain in my joints. I also get a good night sleep of approximately 7 hrs. Previously I had interrupted sleep waking 3 to 4 times a night!!! It should be freely available.

DescrIt needs to be affordable as many people who require it are in my age bracket over 70 and often on a pension. Also mums with young children requiring it for epilepsy and other ailments need to be able to access it at an affordable price.. So should cancer patients. We have seen how it has helped Olivia Newton John We would save enormous costs in medical bills if Medical Cannabis was available at an affordable price. Why should we have to suffer excessive costs?

It needs to be freely available without the present method of paperwork and current procedure. the current method is time consuming and the cost is far too high. There are many growers around Australia that could be suppliers saving thousands of dollars. Hemp and cannabis could help the economy.. It is a natural plant and grows profusely .It can be used for many products, including making paper and therefor saving our trees, Having medical cannabis available at an affordable price, easily accessible from pharmacies or selected outlets would be a huge advantage to the population and to the economy .

I would use CBD in a safe way and read the label and warnings.

I have not used it but over the years I have heard of many people who have and the risks are certainly less dangerous than many legal drug over the counter

DescrWell if a person is suffering and they have very little money it would only be for the wealthy people Im all for helping lower socioeconomic when your not well the last thing you won't is the problem of not being able to afford it

Give health shops the ability to sell over the counter I take many supplements which are natural and I am very healthy I believe CBD Is natural safe and if it's affordable the poorer people won't get sicker by worrying that they cannot afford it

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Catherine Reely

Other

I'm 63 years I was a nurse for many years and I saw the need for CBD but it was not available and tgg hug e legal drugs for pain seem to have side effects I believe cannabis is good for manly people with the conditions you mentioned I believe lab medicine

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used cbd for 3 years. It has assisted in resolving autoimmune issues. It has reduced my anxiety significantly. Other issues such as insomnia, fibromyalgia, mild pain, head fog has no diminished since using cbd oil. I have also healed from some ptsd. Cbd can be used effectively if knowledge on dosaging when starting out is know. I have allot of family and friends that have benefitted from cbd.

DescrCbd is very expensive. Allot of people can not afford cbd. I am a nurse and I am aware of many palliative patients that can not afford cbd.

Cbd should be very accessible. There is no notable reasons why There should be restriction on where cbd is to be sold.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am a kinesiologist who works with a Drug resistant Epileptic who will soon commence on a CBD oil trial and having this available to her if it is beneficial at a low cost is important.

Also I have seen studies done on alzheimers and parkinsons and there is promising research coming soon this is area.

I dont think just anyone can get it but those in need should be able to have affordable access.

Freedom of choice.

DescrSo many applications where CBD oil can be affectve lets allow more people access for low cost.

If Ibuprofen is allowed over the counter.

It has lots of side affects and can be quite harmful, then CBD oil should be allowed.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because I had reports from friends who have spent a lot of time and money trying various "online" CBD oils before finding something that helped them. One was for serious pain from fibromyalgia and the other also for serious hip pain while awaiting "hip replacement surgery"

Reasonably priced CBD oils will allow so many Australians much greater pain relief for so many different health issues, in preference to taking pharmaceuticals that have serious side effects.. I personally know of young woman who was put onto the "liver transplant" waiting list as a side effect from having used high doses of strong anti-inflammatories (Dr prescribed) for too long. She had survived a horrific car accident that caused many broken bones and other complications leading to awful pain for many years.

Should be made available to health food stores with registered naturopaths in house to advise on appropriate dosage etc.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Several good friends are using it to relieve and manage pain and severe migraines - all are responsible older citizens and use it wisely as they do not wish to risk their health.

DescrCurrently the people I know who use it are in a fortunate position of being able to afford the high prices. This should NOT be the case as it limits access to those who can either afford it (and so is not equitable) or it drives people to purchase online and then there are safety and reliability issues. People should have affordable access to CBD in Australia, otherwise why legalise it!!

I believe consumers should be able to access easily and through mainstream outlets such as pharmacies for minor health conditions and through a doctors prescription for major health conditions where dosage etc is key. However for this to work doctors will need to be educated and directed to prescribe as this is not happening at present.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

Family member using CBD legally prescribed - Complex process to achieve - very stressful and time consuming on an already stressed situation.

Various positive outcomes from use- reduced anxiety, cognitive clarity, better quality sleep, improved appetite, chronic neuralgia pain reduction, better quality of life (for a 29 year old person - that means a lot!!!!!!!!!!!!), No side affects. Quality of life with no pharmaceutical side affects is always good.

DescrQuality CBD is the focus, not the price. Of course within reach, But there should be no compromise on quality for pricing.

At the most restrictive - GP prescribed and placed on the register like all other prescription drugs
Initiate cultural change and improved awareness - by the TGA

Do not publish my name or my submission on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe that we should have access to high quality CBD for minor health conditions because friends in the United States have had great responses taking CBD supplements to support their sleep, general wellbeing and general mood support.

Higher prices for CBD would affect my grandmothers ease of affording it for mild back pain and probably discourage her from using it - however, the quality of the product remains very important, and understand a moderate price for CBD supplementation. Higher cost of CBD supplementation may also discourage overuse and irresponsible dosing.

Provide realistic, simple, high quality CBD with simple realistic permitted indications (general well being, general stress, supports healthy sleep)

I would use CBD in a safe way and read the label and warnings.

My sister is a chronic pain sufferer that currently has no effective options to improve her quality of life. She believes CBD would greatly improve her quality of life.

DescrPeople that are suffering with illnesses are often under considerable financial burden with healthcare already, plus potentially being able to work less or not at all due to being unwell. It would be important for CBD to have a lower price to make it accessible to the most vulnerable people in our community that may not be able to afford it. More people that are well enough to work is good for the economy, puts less strain on the healthcare system & social support systems.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am a chiropractor and see lots of people suffering pain and other comorbidities. I have 2 patients in my practice that are currently using CBD oil under the supervision of practitioners outside of my practice. One is for chronic pain related to multiple spinal surgeries and she has had tremendous results.

The second patient is approximately 60 and has epilepsy. Her episodes had been increasing in frequency and severity and the treatment/prescription medication offered by her specialist kept increasing in dose but not impacting on her condition. She was forced to stop work and her mental state was suffering. Not only that she was getting side effects from the medications without the 'upside' of symptom resolution. Then she commenced CBD oil and she went from multiple episodes a week (or day sometimes) to a single episode over the next 12 weeks. She has since moved to a different location but she says that it has transformed her life.

Thinking about the lives that might NOT be changed if access to CBD oil is denied is a saddening thought. Here we have a product that has little to no side effects which in itself is superior to all pain killing medication and potentially a huge upside. Sure it may not work for some people but as we are finding out more regularly now, pharmaceuticals are both harmful and not necessarily that effective. So if they are allowed to be used, it would be crazy to overlook CBD oil.

DescrIt all comes back to accessibility. The price should be reasonable 'per dose' so that it is not prohibitive.

It should be available through registered individuals that work in the health sector- AHPRA registered clinicians and some allied health plus pharmacists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal

information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have suffered with debilitating anxiety for 10 years. It affects every aspect of my life and impacts on my children lives as well. I have sleeplessness and have done years of CBT and been on several anxiolytics. The medications didn't help me and I had a difficult time coming off them. The therapies I have tried have made little improvements and I would be so relieved to know that there is a safe and effective treatment that could help me. Please open up CBD for Australians.

I have had friends who have had to access CDB illegally at great cost to them. This worries me as the quality is not guaranteed and I personally could not afford to do that. My relatives in America do use CBD it as it is readily available with out prescription. Why are we being treated so differently here in Australia. I believe Australians are being penalised by our rigid rules and denied access to health improving medicines.

DescrIt is essential that prices are kept low as so many of the people that need CBD are not able to afford the basics of food, electricity and gas. Please stop the markup of overseas suppliers and provide locally grown, affordable, quality controlled CBD.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have chronic, constant back pain (trapped nerve in my spine) following two unsuccessful operations. I would love to use CBD to alleviate the pain and to help with the symptoms that are associated with living with the pain.

I have used CBD for my dog, after he suffered with fits, which the vet was prescribing expensive medications, which he'd need for the rest of his life, which could cause other serious problems for him. After just 4 weeks and using the CBD for 6 months he no longer has the fits and hasn't for over 18 months now.

Lower prices for CBD would mean that I could afford to purchase it, for myself, and discontinue paying for expensive pain medications that often don't work and/or introduce horrible side effects.

Allow people the CHOICE to use CBD at a reasonable price, if they wish to do so. It's a natural product that has been used for many years, by indigenous peoples, to help with many different health problems.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have read articles and seen videos of the benefits of CBD oil and have been frustrated that it is not legally available in Australia for those that could absolutely benefit from its use. I suffer from panic attacks and poor sleep and I believe it would help me with those. My family have not used CBD but my close friend used it on her dog that had bone cancer and the difference in its pain level was significantly decreased. I know it would work on humans too

A higher price point on CBD would obviously mean we might not be able to afford to try it for any afflictions that arise. I don't think that your socio economic bracket should determine whether Australians have access to medication that can significantly improve their quality of life. CBD should be available at a lower price for all to be able to afford.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A loved one very close to me has had fantastic pain relief results from safe use of CBD, without pharmacist's advice. Our family watched him suffer for many years. After many surgeries that resulted in poor recovery and further problems - he had found no pain relief in pharmaceuticals. At such an old age, pumping his body full of pharmaceuticals was only making his condition worse and he lost his livelihood. CBD had a hugely positive impact on his pain, livelihood and stress levels.

I am currently stuck in a country where CBD oil is completely illegal. I myself suffer from high levels of chronic inflammation from autoimmune disease, and I wish I could have access to CBD to help my condition.

I think the price point of CBD should make the product accessible to each person who is struggling. It doesn't need to be something for the elite. A good honest price is what Australian's need. This amazing medicinal product can change people's lives and should be made available, or supported by health insurance.

Companies must provide full transparency. No tricks, no codes. Put it all on the label.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been aware of the positive benefits of CBD for some time and I think that is a very under researched area of medical science that could have profound effects on peoples health and quality of life if it was too become more accessible. neither I nor anyone I know of has used medical CBD before, but if it was too become available at a low cost im sure myself and many other people would support the use of it.

DescrI think CBD oil should be priced accordingly with how many people use it and the benefits of it. many Australians would not purchase CBD if it was as expensive as it is now because instead they can buy cheap medication that give some serious side effects.

CBD should be widely available at every pharmacy in Australia, either as a prescription medicine, or even better, a pharmacy medicine.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Date: Thursday, 21 May 2020 2:20:42 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from insomnia and mild anxiety. I have only tried CBD oil twice (a few drops under my tongue), from a friend who had some that was purchased in the United States as she was using it to help her anxiety and sleep issues and it works for her. I found that I slept much more deeply and with a calm mind. I also think that CBD products would be very useful for people like me who suffer from age related arthritis in joints and I would like to try it for this reason also. My mother in law also suffers from chronic pain and does not like taking strong pain medication all the time as it interferes with her quality of life, together with the pain. If CBD products were more freely available and recommended by her Doctor she would try them to see if it gives her a better result..

DescrObviously, if a product that is manufactured safely is available at a lower price, then it is more available to the general public who may benefit from it.

I think that if CBD products were made freely available (even if you needed a Doctor or pharmacist consult) for minor health or pain issues it would be wonderful. It would help so many people. At the moment we can't even try it to see if it would work for us so we don't even have an option. Safe dosage labeling and strict manufacturing codes would be the way to do this also.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't used it personally but have experienced the wonderful effects it has had on my friends with breast cancer, many say it got them thru chemo & helped them keep eating. My neighbour for back pain & anxiety, no medications work & tried for years but the CBD oil did. Its such a shame they don't know what they are buying and if they are being ripped off by overseas suppliers and the risk of getting it in + locally if they try and source it. These people are sick yet are made to feel like criminals? As for trials, would take years & these people need it now. Considering everyone is different and so may be results but let the consumer be the judge if it works for them or not

DescrConsidering the conditions people take it for, these people are already sick, some unable to work or already on expensive medications. Being a natural product i think lower prices would be better for the consumer, its a renewable product.

Chemist/pharmacists and natural health providers. Do not think it should be used on a MLM company, friends should not make money from other friends pain & suffering, thats just wrong.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

This proposed change will allow me to bring further and additional support in protocols for my future patients. In my experience I have found benefit in implementing CBD when subjected to mild stresses in life and have only taken the safe dosage amount that has been prescribed on the label. I have family members in California who have found relief in taking CBD as well.

DescrConsidering the socioeconomic climate, I believe the pricing of CBD will affect its availability to the wider public and myself. The lower the price, the more accessible it is. The higher the price, the more inaccessible it will be for those who are unable to afford continuous refills.

The best way for public access is through qualified practitioners to prescribe the CBD at a prescribed dosage and in pharmacies where over-the-counter CBD is given at a low dosage to the public. In both areas of practice the public can be educated in its use and the public will be able to express their reflections through a survey after taking it for 30 days. The survey can be provided by the practitioner/pharmacist at the premises or the survey will be provided within the CBD packaging. The survey can be mailed or given to the nominated address that the TGA approves.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A loved one has [without a pharmacist's advice] tried CBD for chronic neck pain, which has been causing great discomfort for many years....even after an operation to relieve it. It has not helped. We believe that a stronger dose will be needed to help in this case.

Hopefully higher [and stronger] dosage would help, and definitely it should be more affordable for those with chronic pain.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have fluoroquinolone associated disability which has impacted the health and functions of my joints, personally I'd like to use CBD in the place of anti-inflammatories which have given me negative side effects. I also have a close friend with migraines that have not responded to any treatments, she is currently unable to work and is undergoing a drug trial for migraine medication, I would like to see CBD be available to those who do not respond to other treatments.

I feel the price is very important to Australians and myself. Higher prices may make it unaffordable for people who have chronic health conditions that haven't responded to other medications. High prices over time, can be a large financial burden. Lower prices will make it more financially affordable for those who may require it long term such as the elderly.

I feel that people should be able to access CBD through various healthcare providers who have gone through mandatory training and education. I would like to see practitioners such as natural health practitioners, pharmacies, doctors, physiotherapists with dispensing only at chemists to enable a pharmacist to do a final consultation and assessment.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have lived in both Colorado and California in the USA with recreational and/or medical cannabis available. CBD is available and legal in every state in the USA as it is not the least psychotropic. I have tried it for eczema, sleep, joint and muscle pain. I have many friends in the USA who use it for various symptoms, just like a person would use a herbal medicine. I am concerned that Australia is going along a pharmaceutical-only route when CBD is a plant extract. There is no research that shows CBD to be dangerous, certainly less dangerous than lots of OTC medicines and cannabis purchased "on the street". I have a life threatening chronic illness and I find it extraordinary that Australia has classified all cannabinoids similarly and people are still waiting to be allowed to use a simple plant extract. Obviously, safety is important for any medicine, herbal or pharmaceutical and warnings and dosages should be widely available and clearly marked.

DescrObviously, CBD should be affordable for Australians.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I suffer from pain and am able to access cbd but would like to access it at a cheaper cost.

I am on a disability support pension and do not tolerate pharmaceutical drugs . CBD is very expensive and I would like to see the cost reduced so more people could access it.

It would be important for CBD sellers to do some training to advise patients on dose , how CBD works for their particular condition and if there are any interactions with other medicines (natural supplements or pharmaceutical drugs)

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

DescrNatural medicine is already so expensive. Cheaper, proven natural supplements benefits all Australians in the prevention of medical prescription cascades.

Should only be prescribed by professionals (with an association for Naturopaths) and registered for other modalities, who have at a minimum studied BHSc nutrition, naturopathy, herbal medicine, botany, pharmacology, pharmacognosy, and Medical Doctors, as people shouldn't be able to self prescribe without knowing the mechanisms of action - nor to mask an underlying disorder. A pharmacist should not be a prescriber without a full patient case taken.

I would use CBD in a safe way and read the label and warnings.

I am currently a student, soon to graduate as a Naturopath. I have not yet used CBD as it is not easily accessible. My husband and I both suffer with back and joint pain which limits our lifestyle (we are in our 50's). My husband has been medicating with Voltaren daily for a long time now, and still has pain and disability and risks the side-effects of this drug. He would like to try CBD oil as an alternative. We can let you know how he goes (a future case study). I would also be interested to be able to prescribe this for my future clients suffering with anxiety, pain, insomnia and other conditions it shows good results for also. I have heard many good reports of others using this and I believe these to be true. Regards Debbie

I feel the lower prices will allow most people accessibility. I feel the lower-socioeconomic demographic would be most in need due to inability/less likelihood of paying to have massages, acupuncture treatments etc for their ailments. Then there's the other areas of concern such as stress--> insomnia--> anger--> pain--> stress--> insomnia... and it goes around and around. This can be limited/resolved with the use of medicinal CBD oil.

I feel the hybrid way would be most beneficial.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Following a serious accident, that resulted in fractures & severe nerve pain, requiring rehabilitation for over 2 years, I plummeted into depression from PTSD. In addition to the unbearable pain, I suffered from enormous stress and anxiety. The pain medication I was prescribed made me ill so I could not take it and the Dr put me on antidepressants which also made me feel ill. I was told by all the doctors and surgeons I saw that there was nothing that could be done. A friend told me about the CBD oil and as I was separate for help I decided to try it. The results was miraculous. In a very short time, my pain had subsided to a mild level and I was getting the use back in my arm as I was able to exercise again. My anxiety and depression started to lift quite quickly. I have told everyone about CBD oil. It is a natural substance that was gifted to the people on the planet by the universe. It is not owned by anyone. You can't overdose on it. You can't become addicted to it. It needs to be made available to all people as quickly and cost effectively as possible. I believe it will have a significant impact on getting people off addictive pharmaceuticals pain killers and many other dangerous prescription drugs. The truth is that it works. Everyone I have recommended it to think that it is a miracle cure & I certainly think it is too.

DescrCBD needs to be made affordable and should be cheaper than pharmaceutical drugs. The cost to extract this natural oil is far lower than the manufacturing costs of pharmaceutical drugs. By keeping the price low, it will encourage people to try this natural alternative. If it is priced too high it will discourage most people from even trying it. The real cost is in the damage that pharmaceutical drugs are doing to people and the negative cost to their health as a result. I have no doubt that the big pharmaceutical companies will be logging to have it priced high as they have no vested interest in people actually having a safe, cheap alternative that works as it will cut into their monopoly on legal drugs.

My recommendation is that this be something that can be dispensed by alternative therapy or natural healing therapists. They understand the product and how it works. In this community it is already being widely used. Pharmacists and doctors do not have the knowledge about

CBD or the time to learn what is required. Also this natural product is against their rules for prescribing big Pharma drugs. Keep natural therapies away from the pharmaceutical companies and doctors.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have known people close to me that have used CBD safely (from overseas) for pain relief (that no opioid could touch), for anxiety, and for sleep, with no side effects. They have felt incredibly supported by this medicine, and so relieved that they have been able to get relief without side effects and upsets.

I think the price of CBD needs to be accessible to everyday Australians. As with other pain relief and medications there should be PBS versions of this product. It should not be available as a luxury or overinflated product.

The USA has much research on the topic, and Australians would not need to reinvent the wheel. Follow their lead on doses, method of administration - oil (oral), medicated balms (for muscles) etc

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

CBD OIL for MULTIPLE SCLEROSIS

I have been suffering from Multiple Sclerosis since 1993 when I was diagnosed at the age of 37. I am now 63 years old. I am on a disability pension, as my condition has rendered me incapable of working as a teacher. I have found CBD oil an excellent medication for muscle spasticity, pain and anxiety. I have found no relief from allopathic practitioners, who have prescribed conventional, highly toxic drugs that have given me terrible side effects. CBD is a natural medicine, that I have found to be gentle on the body and highly efficient in providing me with relief from my symptoms. CBD oil is non-psychoactive, non-addictive and non-toxic and I don't understand why this wonderful natural medicine is being kept from the public. It should be available for wide spread use and it should be inexpensive. At the moment, the price is prohibitive and it is hard to get. This oil has greatly increased the quality of my life. I await the day it becomes widely available to the public at a low reasonable price. The protocols for using the oil intelligently and safely are widely available on the net. If Multiple Sclerosis is considered a serious illness...all the more reason for its validity. Given the fact that MS is considered incurable, why would sufferers not be able to manage their symptoms and have easy access with costs kept at a minimum.

I am on a disability pension and live just above the poverty line. The price of CBD is very prohibitive at present and difficult to get. It is a no brainer that lower prices would greatly assist those that are most vulnerable, and unable to work due to illness.

It would be a great help if the consumer could buy the oil off the shelf. Protocols for use could easily be provided on the product itself or with an accompanying flyer in the packaging.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal

information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Thursday, 21 May 2020 2:19:33 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A close friend has been suffering from ongoing joint pain. Everything has been ruled out (ie arthritis, rheumatoid, nerve damage etc) to no avail. While they are continuing to seek out a solution it would be great to try CBD to see if he can find relief. He can't use most pain medication because of the kind of work he does. CBD oil would be a great alternative.

DescrCBD needs to be available to all walks of life, not only to the wealthy. Cannabis is relatively cheap to grow, expensive products are simply profiteering off the exclusivity of the product.

CBD could be placed under prescription only scheduling but with access to natural medicine practitioners as well, considering the fact that it is indeed a natural medicine and not a pharmaceutical.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My mother in law who was always sceptical of CBD oil had recurring sores appearing on her face that would in some instances take weeks to fully heal, after multiple visits to her local doctor and pharmacy and lots of dollars spent on extensive medications that were only making her worse - she finally decided to try rubbing 100% CBD oil on the affected areas three times a day. No word of a lie, shortly after the first application she had immediate relief. After the first day the sores began to heal and were not as painful and irritating.

This is just one isolated incidence of how CBD oil, when grown professionally and not on the black market in some dodgy person's garage, can be a wonderful medicine capable of healing and aiding a myriad of health complaints and conditions.

Please for the benefit of ALL Australians, may you reconsider the legalisation of medicinal cannabis.

Thank you for taking the time for reading my story, have a great day.

Lower prices are critical for access by all Australians, there is absolutely no need for this medicine to be expensive - unless of course some organisation along the way puts profits before the health and well-being of the community.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am a trained herbalist and believe strongly in the power of herbal medicine to help people with mild health conditions. I do not believe cannabis is different to many herbs - it has the potential to be misused but also has remarkable power to bring health and healing when used appropriately. CBD oil is a component of cannabis that has good healing potential with low risk of abuse (since it has negligible THC content).

Kava is a similar product in many ways. It is a herb that has potential for abuse, but when put in a controlled dose, tableted form that risk is negated and I have found it a useful tool for managing pain, sleep issues and mild anxiety in some of my clients. I am grateful to have access to it.

Descr

Personally, I think the most appropriate professionals to have prescriptive control over CBD are herbalists, since they have the expertise in dealing with plant-based medicines. However, I understand that is not up for consideration. Therefore, I think that allowing low dose, well labelled, and over the counter access to CBD in health shops and pharmacies (with advice from trained staff) will allow the public to try this product in a low risk way. Many other countries have already accepted this model.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

My sister suffers from chronic pain in relation to an auto-immune condition and has been almost addicted to opioid medications in the past. CBD would provide a safe, readily available alternative to help her manage pain. Similarly my Mother suffered for many years from an auto-immune disease and would have welcomed a medication other than opioids to assist her.

Lower prices for CBD would ensure that all Australians have access. My sister is in the lower socio economic sector of society and struggles to pay for her prescription medications until she reaches the Medicare ceiling each year. There would be many, many Australians in similar circumstances. We need to ensure equity so that all those who need CBD for a medical condition can access it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

Im a naturopath and can see how effective this could be for people prescribed by practitioners with a herbal medicine background. Not just through the oharmacy channel.

DescrIt would depend on the health complaint and research available to identify the best dose and strain. More isnt always best so i would have a reserved approach to dosing and start small where gaps in research appear.

I believe it would be a disservice to the public to limit the availability of CBD oil. Some rural towns dont have access to GPs and pharmacies and naturopaths are trained in pharmacology and herbal medicine so we could take some strain of the health care system by sending by prescribing CBD for an aray of health complaints and offer drop shipping for rural towns.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to see CBD made available to the public in safe dosages at lower costs. CBD was the medicine of choice many years ago and to my knowledge no one has ever died from using CBD oil. I do know of people that are using CBD oil for lower back pain, sleep issues, anxiety, and general pain from inflammation with great success. I do acknowledge that the dosage must be recommended on the labels with a possible incremental dose suggested as the natural detoxing affects or healing crisis the body experiences as part of the healing process can be misconstrued, that the oil is not beneficial. Perhaps a warning to this effect could be mentioned on the labels. Everyone will react differently related to any pre-existing conditions. All users should consult their doctor or pharmacist for contraindications on their current medications and indicated on the CBD prescribed applications or made available.

Absolutely, the price will make a difference to the purchaser. I have spoken to people that receive health benefits from using complimentary supplements but choose to use pharmaceutical products because they can buy them more cheaply on the PBS. I think lower cost would make the product more accessible to the most needy being, the aged, unemployed due to health issues and those with disabilities, as these are the ones that can least afford high cost prescriptions.

I believe perhaps higher dose prescriptions for conditions such as epilepsy, cancer and mental health issues should be made available under prescription or under pharmaceutical advice at a reasonable cost, with clear indications of use on the packaging.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not personally used CBD, however a close friend of mine used it with great success to alleviate pain and stress during a difficult time in his life. I would like to be able to share his experience with others who might also get benefit at such times. It would help if people can access a quality product with ease.

Of course price is important - it is a major factor in most people's choices. When people are stressed, anxious or unwell generally, employment and finances are often affected. To be able to afford a product that could give relief is very important. It is no good to know that there is something that could help, but the price is out of their range.

Access through trained health care providers is important. Education is vital, and people need good advice from someone they can trust.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

Should a health need arise where CBD can potentially assist, I would like the opportunity to at least be able to access and try it, and see if it works for me.

DescrThe pricing needs to be affordable for families, but we need to ensure that it is a quality product. Higher pricing will mean that people will try and access oil that is not safety tested, but pricing too low may mean we don't get a quality product. It needs to be in line with production costs, and not about big profits.

Via a qualified naturopath, or health food shop.

Why, after all the knowledge we have, can't people see it has benefits in cases such as Lupus. People are making CBD already and yes I have tried it and it helps with anxiety and sleep. It's no head rush. Try it. Surely a regulated control would be beneficial to all that are wanting another form of relief, that is not available, but proven to work. Doctors know the benefit of CBD and THC, people are just slow at catching up. Knowledge and education is key unlike the CV-19 App where everyone thinks it's a GPS and tracking their activity, the Govts sold that poorly, but get this right, educate people it's not Dope, for as soon as they hear the C word, people panic. Good luck I hope you get it onto the market, it's out there already, and more reason for a controlled version for everyone to use. And for the record, Lupus causes extremely painful joint inflammation, and without using CBD, people wouldn't be able to do basic tasks, like typing this.

DescrIt has to be accessible for all, at a level comparable to other medications that are alternatives to same.

Through Professional medical health care practitioners.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a loved one who has safely and effectively used CBD in Canada for management of a chronic health condition. The current laws, lack of availability and cost in Australia is a barrier towards health management which I consider to be unethical. I have witnessed first hand how high quality, non psychoactive CBD can help inflammation leading to chronic pain, anxiety, and insomnia. These symptoms can have a severe impact on quality of life outcomes and I think that the opportunity to use CBD should therefore be available to all without restriction.

DescrThe price of CBD oil is an extremely important factor for myself, loved ones and all Australians in general. Firstly, cost should not be a barrier towards health and the health and well being of the public should always be put before profits. I work as a community support worker therefore fall under a minimum wage pay scale so if CBD was expensive it would mean I would not have access.

I think that CBD oil should be easily accessible to the public at a reasonable price point. Given that it is non-psychoactive I don't believe there should be dose controls because different doses work for different people and depend on what symptoms are being managed. To limit the dose may render CBD ineffective and therefore defeats the purpose. I do believe that products should be of high quality with the dosage amounts clearly labeled so people know what they are taking and can adjust dose according to specific needs. I don't believe CBD oil is a substance that would be used unsafely or abused.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have heard many stories of CBD being used therapeutically for different illnesses and concerns. As a plant derived natural option with many potential benefits I think CBD should be available safely and inexpensively for anyone who wishes to use it. More research is likely to increase the knowledge of potential uses and therapies it is successful in treating. I would be happy to use CBD as a first line of treatment before more potentially harmful products.

Descr

Anecdotally in Australia we hear of people buying CBD oil from overseas or online. Being able to purchase from registered providers or from a pharmacy would provide greater safety standards at a moderate price increase instead of a totally unregulated market where there could be dangers as well many great products.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have many patients that already acquire CBD oil online and have great success. Choice of healthcare is an important human right.

A lower price is important, especially for patients chronic pain management who already would have numerous ongoing health costs.

It should be made as available as any other natural health supplement. If higher dosing is a concern then simply allow health practitioners to dispense the higher dose.

Patients can already purchase other doses online, setting a limit only alters where they buy it from if they wish for a higher dose.

Only publish my submission on the TGA website with confidential information redacted. Name withheld please. Thanks

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have done a lot of self research regarding the use of CBD oil and its many benefits. I am a sufferer of anxiety and insomnia and use herbal and vitamins to help manage this. I would love to try CBD oil for insomnia and anxiety. My mother suffers from joint aches and pains as a result of hormonal imbalances and onset of osteoarthritis. We have read that CBD oil helps and she would love to try it to see if it offers relief.

Descr

I would suggest access through naturopaths and pharmacies.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol. ■

I support the “Hybrid” option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had at least 15 people find relief from a variety of symptoms where no other medication has worked. These include anorexia sleeplessness, nausea, vomiting pain and side effects of chemotherapy, ms pain, muscle pain and poor appetite.

DescrWhat a ridiculous question.

If people can't afford medications, they can't get relief for their health problems. Pain relief needs to be affordable. If it's less expensive, more people can access it.

Through natural health professionals because that is where people go when they are looking for alternative treatments to pharmaceuticals.

Only publish my submission on the TGA website with confidential information redacted. I want my confidentiality protected. No personal details

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe it should be available via pharmacy ONLY - once given the training they can advise how to use and also knowing your history. Family have used this for Stress/anxiety and for MS.

DescrPricing is extremely high, many would be deterred and not bother using it and instead opt for a prescription medication

I don't see any other option than as a Pharmacist ONLY medication, possibly even an online registry as they do with pseudoephedrine.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

Having seen both my parents suffer with cancer and pain and this is where CBD would have alleviated some of their suffering. Also I see in my clinic where CBD oil would be of great assistance to many of my clients with anxiety, insomnia, fibromyalgia, IBS, stress and much more. I believe it is a natural herb and should be available over the counter at an affordable price to help many people.

DescrA lower and affordable price would make this more accessible to many in need. Why should we be made to suffer due to low income?

It would be best to be available via a Practitioner eg. Doctor of Medicine, Naturopath and Nutritionist.

Do not publish my name or my submission on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

There are many people who currently use marijuana illegally and would be much happier to be able to buy a safe legal version of cannabidiol. Since the proposal is for a non-THC product, the risks of it being made widely available are minimal, much lower than for marijuana, alcohol, and nicotine.

A widely available product would enable marijuana users to have a safe alternative at a lower price as opposed to a chemist-only product. Also, other people who wish to use cannabidiol legally would be able to do so at a realistic price.

Widely available cannabidiol would assist so many people with minimal risk of harm, and government oversight of its production and distribution would ensure product safety.

There is a large body of international research now, demonstrating the benefits and low risk, so Australians should be able to use cannabidiol in a safe legal environment.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have been suffering from IBS, Insomnia, Anxiety and mild body pain for over 20 years. Never used illegal drugs and rarely used traditional medicines as I believe the side effects of traditional drugs are far overriding the benefits!

If CBD is available for safe use, I will try and report the benefits on how it is helping me with my health issues.

As a retired pensioner, I do not have enough means of spending high prices for medicines to help me with my health issues. Therefore, the price is very important and if it is affordable more people will be able to use it and hence lesser overhead for the economy.

CBD should be available and affordable for the public, especially retired and low income people so that everyone can have a chance to try and improve their health reducing the suffering of minor health issues which contributes to a healthier and better life style and lesser dependence on the government health practices.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

CBD is a proven anxiolytic and would be very helpful with my anxiety. It is also helpful for insomnia and mild pain relief. The evidence is clear that it is a cost-effective and effective treatment for many health issues.

DescrIt is crucial that CBD be accessible to everyone that will benefit from its use. It should not be limited to only those that have financial resources to treat their health issues with this highly effective option.

It is time Australia caught up with progressive countries that offer a diversity of solutions for health-related issues, including CBD. I have a close friend that suffers terribly from rheumatoid arthritis and was able to use CBD when living overseas for a few months. It was the only time she has experienced true pain relief. She returned to Australia and has continued to suffer terribly due to CBD not being available here. The impact on her, her son and family is immense and to have CBD would make a huge difference. This is just one example and there are most likely thousands and thousands around the country.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

My aunty in the US uses CBD oil for lower back pain and is always recommending it to my mother. She would like to be able to try it as it works so well for her sister. Instead she is in a lot of pain and taking alot of NSAIDs, which is in the long term are not good for her.

DescrIf it is something you are using for a chronic condition such as anxiety or pain, then it needs to be affordable, otherwise you would choose cheaper pharmaceuticals that may not be as effective or have long term nagative side effects. Affordability is importnat, most natural supplements are too expensive.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

Internally ingesting 5 drops of low THC CBD oil each night has lead to a significant decrease in symptoms of anxiety and an increase in restful sleep. I feel calmer, more alert and generally much happier.

DescrCBD oil is incredibly expensive and at the moment you never really know what you are getting (whether CBD or HEMP). Our bodies cannabinoid receptors make us really ready for this healing and calming natural substance to enter our system, and it shouldn't be so unreachable. Lower prices would mean more people would be able to trial it for themselves and potentially recover from and prevent a myriad of emotional and physical conditions and symptoms.

CBD oil should be available in health food stores.

As a licensed naturopathic physician in Washington prior to living in Australia, I was licensed to prescribe all forms of medicinal cannabis, and it was hugely useful for many of my patients with a wide variety of conditions. Access across the counter to high quality CBD oil in Australia would allow me to make recommendations to my naturopathic patients to support their health and wellbeing and reduce their need for other medications in many instances.

DescrHigher price would make CBD inaccessible to those of lower socioeconomic status--I don't think that is acceptable, it should be available to all.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Last year when visiting the USA I was able to legally purchase CBD in many of the states I visited. I took it daily as per the recommended dosage and in the month I was there noticed a marked improvement in my pain levels, anxiety and my ability to sleep. It was very difficult returning to Australia and not having legal access CBD,

I am a strong believer that access to CBD will give people an alternative to dangerous opioids. It is important that CBD is accessible to all Australians so the pricing needs to reflect this.

It should be as easy to buy as any over the counter medication at a pharmacy. Time for Australia to catch up with many other countries and do the right thing.

Date: Thursday, 21 May 2020 1:54:05 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I have a son with refractory epilepsy who has failed 6 drugs and has only some seizure control of a ketogenic diet. CBD is out of our budget (yes, I can read that you don't want me to mention epilepsy) at about \$400 per month.

DescrEvery drug that is able to make changes to quality of life shouldn't just be fore the rich.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Yes, I have used CBD oil safely and it has been extremely effective with relief of mild anxiety & better sleep. It has helped with relaxation of muscle & joints. I would really appreciate Australia getting on board with this in the same way as other countries have. There have been excellent results with many ailments in both adults & children. Thank you for this survey. A step in the right direction!

Best

Davini Malcolm

I think that this is an obvious choice - lower prices for top quality CBD oil would make it accessible to those that otherwise would not be able to afford this medicinal product. There have been too many products in the past that have only been available for people who can afford them - its time to close the gap and be supportive of the Australian people as a whole. Such a positive stand.

I think that it would be great for the public who are aware of the benefits of CBD oil to be able to purchase over the counter (non pharmacy) and also doctors to be able to provide education and recommend to their patients where necessary.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Personally have not used. However know of people especially overseas that have found many benefits from using it. Ones that have used it, were for loved ones suffering with seizures. How it changed the loved ones for the best has been a life saver, especially when no side effects were noticed., and after conventional methods had failed. In other cases, some how used CBD, for pain relief and have had fantastic results after exhausting other methods. So yes, it's time to bring this or even better start growing here in Australia. What a great venture it will be for us in so many ways especially for the public to benefit from .

DescrIt's important for everyone to access CBD to reap the benefits. It can't just be a select few.

We have the ability to grow this here and get the public on board

I would like to see the health fraternity, natural therapists have access to CBD.

Only publish my submission on the TGA website with confidential information redacted. Name

I would use CBD in a safe way and read the label and warnings.

I have had positive experiences with CBD oil
It has been very successful treating my own pain that I experience with M.S
Also very beneficial treating menstrual pain

DescrPrice is very relevant to people wanting to try organic CBD oil
I am on a pension and my income is limited
Australia is the perfect medicinal crop to grow in our climate
For medicine and as a textile for clothing

Health food stores should be able to supply Australians with good quality CBD products

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have previously used CBD to manage my mild anxiety and depression and had very positive results. The only thing that stopped me using it was cost. I have been recommended other prescription drugs previously however prefer to you natural substances so would be very keen to be able to use it on an ongoing basis.

DescrThe price of CBD is extremely important. in the times we are in every dollar counts and at current prices it is impossible for me to purchase CBD on an ongoing basis as we are a single income family. If it were at a more manageable price I would start using it asap.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I currently receive CBD via the Special Access Scheme, and have found it to be extremely beneficial for my fibromyalgia whilst also providing a reduction in anxiety symptoms. The CBD replaced Endep which I previously used for many years to relieve nerve pain, but I had had a terrible time with it due to side-effects. I have had no issues with side-effects on the CBD. Unfortunately, CBD is very, very expensive, and not widely available. If these Hybrid changes went through, it could mean that I might not need to budget \$300 per month on CBD, which would help so much when I already spend so much money in a year on my health issues. It's pretty shocking that \$300 is one of the more affordable amounts people pay in a month for legal CBD. I would like to raise my current dose of CBD to see if I can get additional pain relief, but it isn't financially viable. It's extremely frustrating that money is the barrier for pain relief, not the medication itself.

The price point and lack of availability affects many people I know who would otherwise be interested in trying CBD for symptom relief. I know those who have fibromyalgia and arthritis who would love to try it for pain relief and the anti-inflammatory properties, but the price point isn't viable. I have family members with severe anxiety that I think could benefit from CBD, without the side-effects and addictive elements that can come with other anti-anxiety medications.

I am I concerned about those who can't afford CBD, and access it illegally out of desperation due to health issues, and who may not be getting a safe and quality product. CBD has changed my life for the better, and I want others in similar situations to get the same relief legally, without any unnecessary danger.

DescrAgain, I currently pay approximately \$300 per month on CBD. I would like to raise my current dose to see if I can get additional pain relief, but it isn't financially viable. It's extremely frustrating that money is the barrier for pain relief, not the medication itself.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

Proposed changes to CBD availability would potentially provide significant benefits in my efforts to treat my Crohn's disease, without significant undesirable side-effects. I also feel that it would help ease associated anxiety related to the condition that interferes with my ability to engage fully in my work. My mother suffers from migraines and poor quality sleep which could also be helped by CBD and I'm sure there are many others who could too.

I have not tried CBD before, but am hearing many potential and promising areas of application, and believe that it should be more freely available for people to try, and opening the doors for further medical trials for more serious conditions.

The price of CBD is a key factor in its availability as an option for people, because unlike medically trialled pharmaceuticals, it would not be subsidised on the PBS. Higher prices and limited suppliers also restrict availability. Natural medicines should be closely quality controlled, but not monopolised by a single producer.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I have loved ones who have been helped by CBD oil for their mental wellbeing, reducing anxiety and anger and make them generally happier. In contrast I have had many friends and associates tell me their traditional anti-depressant drugs make them feel like it emotionally flat lined. It is like they don't feel bad but they just don't feel anything. I think CBD has a much more natural affect on the mind. I also know people who use it for pain and once again I feel it is a better alternative to traditional pain killers which have such a destructive effect on the microbiome.

I would use CBD in a safe way and read the label and warnings.

I suffer with chronic back and nerve pain and have even had spinal surgery. I have 2 young children and do not like pharmaceutical pain killers as they affect me in a negative way. I cope with the pain during the day but I find it makes me very snappy and irritable and at night it is so hard to get any sleep at all, I just can't get comfortable. I'm constantly in pain, cranky and exhausted. I'd love to try cbd at night to see if I can get some relief. From all my research I believe it would help. I'm a mum so I don't want to do something illegal and I don't want to deal with shady characters either - because of this I have no choice but to just suffer. It would be so comforting to know I could walk into a reputable professional establishment, actually talk to someone about what would best suit me and even maybe get a recommendation. I don't understand why Australia is so backwards and behind on this issue. Everyday people like me are suffering and you have the means to help, so why wouldn't you?

I think the price needs to be realistic. If the price is lower then people will be less likely to go to some backyard dealer. Let's face it, if people want something now they can get it... it's expensive and has zero control or regulation. People are getting it anyway. Lower the price, regulate it. That's how you take back control and remove the stigma

Follow the lead of California. Legal dispensaries at affordable prices to adults and undercut the black market. Much they way bottle shops and Tobacconists operate.

I would use CBD in a safe way and read the label and warnings.

I haven't used the CBD personally yet but if I had any ailments requiring any medication or help I would always turn to natural remedies regardless of "proven TGA approvals" I am a qualified Naturopath non practising and have always had more response from natural treatments than running to pharmaceutical drugs with a list of know side effects and long term inability to cure the diseases prescribed for in the first place.
Give the choice. back to the people.

DescrThe price of CBD is extremely important for Australians and should be made affordable as obviously up against traditional Government approved pharmaceutical pills and potions would mean Australians would still turn to standard pharmaceutical drugs due to price which is supplemented by Govt. This is another way of Big Pharma controlling the direction of the consumer.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Date: Thursday, 21 May 2020 1:53:15 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Have autoimmune disease and research indicates may help with pain especially for a good night's sleep. Also change in weather or when I become cold, pain increases with joint stiffness.

DescrBeing on a low income means money is always tight and sometimes go without to have necessities. To have a plant based pain relief at an affordable low cost would make life easier and more bearable. Certainly there are manufactured pain relief products by large pharmaceutical companies available on a script but would prefer something more natural. As able to give feedback on usage, more information becomes available for future users including any side effects. Low prices would enable more people to use and possibly cease taking all stronger medication. Leading to less addiction of opioid based products and use of illegal products. In the long run potentially cost the health system a lot less.

I would like to see those selling it have to do training in it's use dosage and most definitely in use with prescribed medication. Perhaps medical profession should be encouraging patients to try CBD with a correct dosage for their condition and report results to GP, then be able to buy as required.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would not use CBD in a safe way and will not read the label and warnings.

I have used CBD oil whilst in the UK for help with reducing the onset of headaches, I also find it helps with mild anxiety feelings. I now no longer need to reach for that usual paracetamol dose as I've had such success on myself. I believe it is already being used in other countries and has proven research to help with a number of ailments. This product would help a number of people who want to try more natural ways of relieving ailments such as mild pain or anxiety/stress.

Lower prices of CBD oil will affect me because it would be more affordable for me to use this as a substitute for synthetic drugs like paracetamol. With higher prices I believe it will only be available for those who can afford and therefore leaving out a portion of our population who cannot.

Approval through practitioners like Naturopaths, so it can be used in medicinal purposes would be helpful.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have known several people both close to me and acquaintances who have used CBD for various illnesses, disease and pain with great success and little to no side effects, however it has been costly and at times difficult to obtain. Making it available will ease the discomfort and added stress those people have had to go through to obtain it.

High prices for CBD make it unattainable for those on a low income or not working and is unfair for those who may most need it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Freedom is the most important value in my life. To be able to 'legally' access CBD oil, which comes from a natural plant on Earth, (if I chose to), would be freedom to me. It should be up to each individual to freely choose what they wish to put into their bodies. There are so many wonderful health benefits this plant offers- and I believe that it is our right as human beings to explore and utilize this incredible plant medicine! It was put here for a reason. I am a health professional and I have worked in Psychiatry- and I have witnessed the awful side effects of traditional pharmaceutical drugs provided to inpatients experiencing mental illness. It is truly devastating that these drugs are the 'go to' treatment, when something that comes from nature is considered illegal. I feel very passionately about this matter.

DescrCBD should be accessible for all Australians at a low cost.

I feel Australia should follow in the footsteps of the US and Canada in this regard. I believe we are slowly heading in this direction.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been diagnosed with cfs and resultant low mood and anxiety. I also suffer from fibromyalgia and mild arthritis. I have tried cbd oil and found it to greatly improve my mood, pain, digestion, stress and anxiety and sleep, with no side effects. It works better than the prescription pain killers, anti anxiety drugs and anti depressants that I have used in the past, which had serious detrimental side effects. The barrier to me keeping up the treatment is the high cost of prescription cbd and difficulty obtaining a high quality product at lower cost.

DescrLower prices would be graet and allow me to have access to a natural effective product that dramatically improves my health and quality of life.

I believe the best way for the public to access it is over the counter with no restrictions on access. That way competition will ensure that it would be affordable for the sick people who will really benefit from it, as like me, a lot of unfortunate people with health problems have impaired work capacity and greatly reduced incomes.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been taking CBD fairly constantly for the past 6 months. I say 'fairly' as the cost is highly prohibitive. I am awaiting approval of pharmaceutical support from the TAC. I suffered a severe brain injury in 1999 and have had a plethora of symptoms and effects to contend with as I have rebuilt myself over the past 21 years.

Since taking the CBD I have noticed a reduction in many of these including my stutter which has all but disappeared. I have complete faith in the salience and effectiveness of this treatment and wish dearly for it to be as accessible as conventional medicines.

Please do this for the good of so many who are suffering from maladies there has been no treatment for up until now.

Please make it affordable for those without the means for hope of relief.

I have already spoken about how the cost is having a deleterious effect on the regularity I can take my prescribed dosage. As someone who has relied on my insurance and the pension to live (to a large degree) since my injury, cash is in short supply. I know there are many out there in a much worse position to me. If CBD was available on the PBS, or even had a more affordable price tag, so many could be experiencing the remarkable change I already have.

I have spent the past 21 years dedicated to researching ways I could 'get better'. CBD has provided one of the quickest, most far reaching of results experienced yet. I can just imagine the relief others could be party to if they had access and could afford it.

CBD could be available alongside pharmaceuticals with the same freedom of supply. I truly believe with a naturally occurring substance such as this it is, indeed, our human right. CBD is non-hallucinogenic and does not adversely effect the functioning of the recipient. To the other extreme, for me the benefits of this substance are continuing to reveal their marvellous ability to rectify what has been awry within my neurological functioning for so long.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe the proposed changes to CBD access will greatly improve the health of my family, we have not yet been able to try CBD as we are unable to legally gain access to products that contain it. Although I believe it will be of particular help to my husband who not only drives trucks (thus he does not use opiate based pain medications and therefore just lives in pain) but also performs much manual labour and has had previous spinal surgery would welcome a pain relief alternative that has been shown in other regions to be well tolerated. For myself I would love the opportunity to see if CBD is also able to help me with my generalised anxiety and IBS symptoms an alternative/complementary treatment is always welcome.

DescrThe price point of accessing CBD would be an issue I believe for most Australian families, if found to work for my family I think I would do almost anything to find the funds in order to use it but may come at a significant cost to the remainder of the family budget.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have and use CBD products and believe that they are of major importance in helping regulate my anxiety, stress, sleep and overall wellbeing as a father and business owner. CBD should be made available easily and affordably for all people to gain the benefits of the product.

Lower prices means that the product is available for all economic backgrounds to be able to access the benefits of the product

Private distributors and manufacturers. Make it widely available to be able to source hemp seeds and flower products to make CBD so there are more options on the market for people to choose from. It also gives the option to create more businesses which increases tax revenue for the government.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My partner was prescribed CBD by my Natural Therapist to alleviate mild arthritis in his fingers. Being a guitarist by profession this was a concern for him. After two courses he was able to bend his fingers and play his complicated guitar solos without any pain. It would be wonderful if high quality CBD was available at a lower cost should he need to use it again in the future.

It is essential that the price is lower so more Australians can benefit from CBD.

I would use CBD in a safe way and read the label and warnings.

I have used CBD as recommended by a Naturopathic Functional Doctor. I had incredible results with the product (Mind you, it was of very high quality - much of the worlds CBD is not at the quality it should be) As the plants must be treated with natural sunlight, with love, enough spaciousness etc with enough time to grow. If we follow the 'capitalist' model of 'lets make as much as we can for as little as we can and get it out there as fast as we can' then it's benefits won't be reaped by the body. As an athlete CBD helped me recover from training, it also reduced social anxiety/stress, it helped me get better and more restful sleep, allowed me to relax in general a little easier and allowed my body and brain to do some deep healing. It really did make me a more balanced, calm and centred person to be honest with you,

DescrBecause everyone deserves to give their body what it needs.. So the price is important because the human body needs cannabinoids in the diet. Higher prices would make it less accessible for me personally.

Ensure ethical, sustainable, biodynamic practices, spend money on educating the public and let them have their freedom to trial and error themselves. With education comes understanding and with that understanding comes compliance and responsibility. Let us take responsibility for our own health.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have multiple health conditions, including Fibromyalgia, which has effectively been made less pervasive by the careful use of medicinal CBD oil. I have experienced less pain, anxiety and increased sleep and these effects of CBD oil treatment have been very gladly received. Both mental and physical states have benefited.

DescrHigher prices are prohibitive for many Australians- high prices mean the rich profit only, how can that be justified?

Only publish my submission on the TGA website with confidential information redacted.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Have arthritis, back condition and fibromyalgia with high pain level at times
Had the smallest dose of CBD oil when living in US - under medical care and had no side effects. It worked and did not make me sick as modern medication. Only had to take it when pain flared up. Gave me quality of life.

DescrAffordable treatment would allow me to look after myself. Have not been able to renew my usual prescriptions for past six months as cannot afford them.

Through pharmacists or specialised stores like in California and Nevada after consultation with a practitioner regarding appropriate product and dose best suited to condition

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used creams from the US with CBD, and found them effective. It is widely used with much success all over the world. Not sure we have reasonable excuses or evidence not to have it available in Australia.

DescrWhy not make it easily accessible for all? What's the point otherwise. Many folks who may really need it for serious complaints, may not have the funds to pay for a higher priced item, as happens with lots of medicines.

I believe it should be readily available, chemists or other such stores (Priceline, etc)

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a counsellor & therapist I have many clients suffering from low level but long-term anxiety, pain and insomnia. They have very little help available to them. Easy access to CBD would alleviate their issues and promote their higher productivity & quality of life.

DescrLower prices for CBD will enable more access to it. CBD will be a great solution for the anxiety & pain of lower socio-economic groups, who cannot afford regular psychologists and medication. People who have had their 10 free psychologist session & who need more but who cannot afford them. CBD can allow these people to feel & function better and be able to get on with their lives in productive ways.

The best way for the public to access to CBD is to be able to buy it at a chemist without a prescription. It is a safe product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Accessibility to all forms of plant derived, natural health products for optimal health support and well-being at low cost, is something our "leaders" should be supporting for the highest good of society as a whole. The plants are given to us in God given Nature, not as financial profit to human. Costs for making such products easily accessible to all, is naturally understandable. Inflammation and Stress underlies disease on all levels of existence in modern society. If plants support ease and comfort, why not make it easy for all to access?

DescrLow costs are accessible for all.

We have not tried CBD but totally support its use for those who would like to try an alternative to conventional medicine. I would definitely use it if required.

DescrIt does need to be at an accessible price for Australians, not made to be so expensive that their choice has been reduced to conventional medicine, which as we know is not always the best option. It often leads onto to having to take more drugs to counteract the effects of the first drug, something Pharmaceutical companies base their existence on. All Australians have a right to make their own choice after exploring the options available to them.

This needs to have the support of the Government, they are very quick to support the pharmaceutical companies, they should also support an individuals right to access this alternative at a competitive price.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would not use CBD in a safe way and will not read the label and warnings.

I have personally used CBD In my travels to Europe I have found that CBD effectively reduces my stress and anxiety in my day to day life. Personally I'm responsible for 2 businesses and 10 individuals working under me I've found CBD takes away the stress of running my businesses and dramatically helped reduce anxiety. CBD still gives me the right frame of mind unlike when taking Valium and other diazepam where you feel groggy and not in the right state of mind CBD allows me to continue my day to day life without any effect.

DescrCBD should be accessible to everyone price gauging or having restricted retailers will drive separation in the market and effect accessibility to those who need it most.

CBD should be available the same way any other health care goods are. Restrictions should be in place and it should not be saleable to minors however with the ever changing retail climate it should be saleable online the same way it is in Europe.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD oil. My sister used it for a brief period for her anxiety and it really helped.

DescrIf the price of CBD oil is high, fewer people will have access to it. As it is a natural substance with healing properties, it would be great for many people to try it for all sorts of things, like headaches or irritability or anything. It certainly wouldn't hurt them as it doesn't have any major negative side effects as most pharmaceutical drugs do.

CBD should be freely available at from health professionals, allied health workers, pharmacies, and health food shops. People should be able to make their own CBD and use it in whatever way they wish. I don't understand why we have to petition people to ask for something that has been given to us by the planet. But here we are!

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

CBD has cured my fibromyalgia, IBS, and generalised anxiety disorder. I am back at work after being disabled for 10 years and my doctors essentially trying every possible medication on me then telling me at was my 'new normal'

DescrFor some, for me I'm willing to pay more for a higher dose and good quality. It would be good to have it available to everybody, as many people who are on DSP could benefit

Please don't be blinded by this being from the same plant as marijuana. Please be open minded, it has genuinely helped so many and could help so many more and receive a huge pressure on the health system

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My mother has used it for chronic pain but due the extreme high costs she found it difficult to continue with it. She was trying to get off optimum & codiene derivatives, but the normal painkillers are more cost effective by \$200-300 per month.

DescrIt's extremely important as the cost makes it unaffordable for people who may be in need of it. Creating a divide

I think it needs to be regulated as all medications. But should be able to be given out by doctors or nurse practitioner as outlined for all drugs.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Please give us access to this extremely safe medicine. I can buy Panadol at Coles and destroy my liver with a single packet... please trust adults to use their own powers of discretion and intelligence. We need greater freedoms as people, not more restrictions. Please provide access ASAP.

I wouldn't be able to afford it if it were expensive.

Sell it like any other supplement.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have endometriosis and anxiety and have found CBD taken overseas for a prolonged period of time to be extremely beneficial in both my mental state and in reducing pain that is otherwise only reduced by higher doses of strong NSAIDs, which worries me because I am aware of the impacts that long-term NSAID use has on health. I feel like I have no other choices available to me as very few things work on endometriosis pain.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would use CBD in a safe way and read the label and warnings.

I have not had any personal experience with using CBD, I have several friends in USA who have used it for pain relief associated with arthritis. I have a elderly mother who has mild pain associated with arthritis and would like to use a product that has minimal side effects.

DescrI think higher prices would restrict availability to the elderly and low income families that wanted to try CBD

I believe the best way for the public to access CBD would be through Pharmacies

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It would mean I could walk into a store and buy CBD without going to a GP who has no knowledge or training with Cannaboids. I am sick and tired of being treated like I am a criminal for wanting to use a natural product that I have used and seen the benefits first hand for mild pain and mild anxiety.

This would mean I do not have to deal with severely crap companies like cannvalate who never answer emails or call you back until you threaten them with reporting them to the Australian Health department for mismanagement of a patient and access to order more medicine. This would mean the world to me as there is a lot prejudice against hemp because of Cannabis and people not knowing the difference and then treating you like you Druggie because you would like a natural alternative to Codene baised products like panadene forte.

Descrhigher prices means I have no access and would have to deal with get rich quick companies like cannvalate and considering what I had to deal with from them or have to pay over 700 dollars for two 90 ml bottles. I would rather that greater majority of australians have access to this medicine at prices they can afford.

through chemists over the counter would be the best so people get instructions or any information to take into consideration.

Only publish my submission on the TGA website with confidential information redacted.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have heard/read about the therapeutic benefits of CBD and think it should be easily available for anyone who wants to try it to help their situation

DescrIt should be easy to access all types of remedies with health benefits, which means the cost must be affordable. For instance I have heard/read good things about CBD oil use with cancers, and people with cancer have enough to stress about without worrying that if they want to adjust their diet, add supplements or try something like CBD oil it will be cost prohibitive.

I would be happy if I could buy it at the chemist, as they could provide some advice on use and contraindications, but I wouldn't necessarily want to prohibit it being available through other sources.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I have heard and seen life changing results from cbd oil on all kinds of people, men, woman, all kinds of ages. I have stood in the eyes of a suicidal elderly man begging for understanding him for wanting relief out of a system of pharmaceuticals that are addictive and health damaging. Causing all kinds of health issues that cbd can heal.

Cbd is the best and only option for some people. For chronic pain relief, health benefits and mental health relief it is injustice we are unable to use this beautiful natural plant medicine to save lives and the well being of our people. I hope so much this will change in our country.

DescrIt needs to be at an affordable cost. The price of cbd is too expensive for many i know otherwise they would have used it already for chronic health reasons.

At affordable prices with easier access (more places to access it)

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Both myself and my son (under 10) have used CBD. It was 'extremely' helpful for both of us. My son suffers with ADHD and was suffering high levels of anxiety. We were able to obtain CBD through a member of the public making the product at a very high cost but 'thankful' as it worked beyond our wildest expectations. 6 months later he no longer suffers. I have also used it for abdominal issues and migraines which worked better than prescription medication I have used in the past. We are unable to obtain the product and to be honest would much prefer to obtain the CBD via a reputable source and know exactly what is in the product. I do believe CBD would have the potential to help so many people with a range of conditions.

I believe lower prices for CBD would benefit the community greatly as I know from personal experience I would be able to afford to purchase and would much prefer to use CBD for my conditions as it works without other side effects and I would have fewer days off work.

I believe CBD should be made easily and readily available for the general public as it would have a beneficial 'knock on' effect through out our community. I think CBD could be made available over the counter without prescription upon request from a pharmacist as well as Naturopaths and other health practitioners as I do believe an explanation needs to be given to a patient before administering. I did research on the quantity needed as it wasn't provided and I was able to obtain great results but some members of the public may need assistance.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have seen many people benefit from use of CBD..some minor help some quite profound. I have heard no one report side effects. only minor or more improvement in the reason they tried it

This is not the case with people on other medications, friends have often spoken of how bad they feel or other problems from taking what helps 1 thing.

I have used CBD, it helps in wellbeing and balance, thankfully i don't need to take it, and normally don't after trialing it but fully support the use and availability for those who do

DescrObviously reasonable price access allows more to participate. A lot of challenged people physically are also financially. if that stress is removed then a healthier happier person is an asset to society not a burden.

Make it easy for clean legitimate access.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I regularly smoke marijuana for the purpose of stress and anxiety relief. I also have stress induced bowel problems which this also helps for quite a lot. I have been wanting to use cbd legally for a long time but this country is a long way behind the rest of the world.

DescrAs a person working on a standard/minimum wage \$45-\$48k per year. Lower prices would only benefit me, higher prices would be a hinderance to me.

I'd say access to safe legal cbd products is better than people like myself, self medicating using cannabis with high levels of thc, although I don't mind this ;)

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a believer in traditional medicine and science, alongside natural medicine, I would be very happy if CBD medicines were safely made available for people to use for mild conditions. I have myself used it topically for pain and my mother has used it topically for the pain of arthritis in the past too. I worked at a 'medical marijuana' clinic in London in the early 2000's and learned the benefits of CBD on the management of minor conditions, witnessing first hand the positive effect as an anti-spasmodic, anti-convulsant, anti-nausea anti-inflammatory and anaesthetic. It seems to have many effective health results without serious side effects or addiction.

DescrThe price will determine the accessibility. The higher the cost, the less accessible it becomes and people will resort to other prescription medications which are priced better, but which carry greater side effects and higher likelihood of addiction.

Over the counter at pharmacies & health food stores at the lower doses. Via prescription for the higher doses as required

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer with chronic lower back pain along with other medical conditions which I have heard CBD oil may be effective in relieving some of the symptoms of and I would like to try it legally. I think the proposed change will have a positive effect on many peoples lives and would like to recommend it to go ahead.

DescrA higher price for CBD oil would make it unaffordable to my self and those who could really benefit from it's affects in helping to relieve pain and other symptoms.

Being able to access CBD over the counter at pharmacies for a reasonable price without a prescription would be the best way for the public to access this much needed medication.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I lived in the California for 11 years and had a prescription and membership to Cannabis clubs. I used CBD and never had a problem sleeping and other cannabis products immediately relieved my back pain. So many people have problems with prescription drugs, cannabis is a good alternative. The sales tax also brought a lot of revenue for state governments.

DescrAccess to CBD much healthier than prescription pain and sleep medication.

Through clinics once approved by a doctor.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been living in the US (returned due to covid) and have used CBD to help with difficulty sleeping. I've also used it to help my dog who is reactive due to being a rescue.

I think CBD should be mid-range so as to make it available to as many people as possible, but still ensure people take it seriously. A lot of the symptoms it helps with (mild anxiety, stress, pain) are potentially more likely to impact lower socioeconomic groups and if you price them out of the solution then it won't actually do any good.

It should be available for use in several formats eg salves/creams, drops to mix in to water etc. I think tablets and vape capsules should be avoided.

Do not publish my name or my submission on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to know what other options are out there to treat my anxiety. I'm currently on medication and have thought about going off them but I'm too worried that there aren't other options that will support me if I do have a panic attack that work quickly to calm me down. Medication only works once you've been taking it for at least six weeks and you need to stay on it. I don't like Valium because it can just put me to sleep and temporary relief like herbal teas have no affect what so ever.

The ability to use CBD without a doctors appointment for low to medium level pain, for stress management and sleep issues. It is a natural remedy that harmonizes with the human system, unlike pharmaceuticals that are invasions on the human system.

Of course lower cost is vital. We need to be able to assist the whole of community, not just the rich and wealthy!

Stop being driven by the pharmaceutical industry. Natural remedies are healthy, more synergistic and harmonize more so with the human condition. They also have less side effects. Wherever possible natural medicines should be used first, leading strong drug medications as a last resort. Drug medicines are changing the human condition in negative ways.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am allergic or suffer adverse reactions to all pain relief except paracetamol. I have no other alternatives except cannabis and medical cannabis is extremely expensive and difficult to get and no where near as good as black market. I've got a prescription for it, paid \$600 for it and I've had an adverse reaction to the MCT that the legal cannabis is suspended in. There are no alternatives available apparently. CBD being readily available and hopefully at a lower price would enable me to reduce my pain and hopefully no longer be housebound. I simply DO NOT UNDERSTAND how this herb is not readily accessible (I'm a Clinical Herbalist).

DescrI paid \$600 for medical cannabis and I cannot afford that (oil and herb) and most people who need cannabis the most are disabled and on DSP which makes it only the rich can afford it and the poor just suffer.

CBD has no psychoactive components and should be available in supermarkets and convenience stores. Cannabis simply cannot hurt you in any way and should be readily and easily available everywhere.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I currently use CBD, i use it responsibly i have pain, anxiety and bowel issues, and sleep problems.

It helps with all of the above.

Australians deserve to have access to anything can help ease their suffering. It should be an individual's choice.

DescrIt is currently \$200 which makes it unaffordable for most people. That's outrageously expensive and makes it inaccessible for most Aussies.

There should be regulations covering how it is made, quality controls, measurements etc.

Australian standards or legislation could cover it.

The companies who make it, need to meet minimum standards for everyone's safety.

No backyard gumtree CBD sellers!

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have formal diagnosis of endometriosis and IBS. I suffer from menstrual cycle pain and diarrhoea which impacts my ability to work and result in me have minimum of 3 days of (now unpaid as all has been used) personal leave per month. CBD/Cannabinoids are medically proven to help relieve the pain. If i am able to access CBD it will improve my ability to continue work and earn enough income to maintain my living expenses. I also experience IBS, and when going through my menstrual cycle i experience diarrhoea. CBD/Cannabinoids are medically proven to help improve gut motility and will protect my gut from further inflammation and stomach acids. I have trialled CBA safely with positive without a pharmacists advice and experienced pain relief. This will improve my health and wellbeing. My sister has a formal diagnosis of Fibromyalgia with symptoms impacting her ability to work and daily function. If my sister is able to access CBD to treat her symptoms of chronic pain and difficulty sleeping.

DescrIf prices of CBD are higher i will not be able to afford to access pain relief. My income is limited due to unpaid leave as a result of pain and is going towards my basic daily land living expenses and towards my health treatment. If prices for CBD are high i will not be able to access or need all of my health needs.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Consumer

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used it without professional advise and it helped with anxiety and pain relief better than a panadol would.

DescrNot everyone can afford \$100 a pop for a small supply of medication, so if its made more affordable it would benefit those who are in a low income bracket.

Take away the stigma, and educate more on how its not a hippy drug, by letting people find out the benefits, and how its different from smoking weed.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

My 81yr old mother is on CBD oil for pain, poor sleep, and Parkinson's. Currently it is expensive for her but because it works well for her, she wishes to stay on it. Seeing a neurologist to get scripts is also expensive.

DescrLower pricing would allow greater access. It should be available to all, not just the rich.

Availability through pharmacies, health food shops, and healthcare professionals like naturopaths.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have just come back from living in North Carolina in the USA for 6 years. Low does CBD was freely available in pharmacies, health stores and vape stores. I found it to be highly effective in treating anxiety and aids with quality of sleep. It was also very good for treating skin irritations, such as eczema.

I used for over 2 years and never suffered any adverse events from its use, this is why I support over the counter availability of CBD

DescrFor the reasons I stated previously, CBD is very effective treatment for anxiety. I use to be able to buy this in the US for around \$30 per 40ml bottle, which would last 2 to 3 weeks. Pricing is very important

Proposed method of over the counter at Pharmacies is fine.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have no need for CBD currently. When caring for my daughter-in-law who was ill, I would have appreciated access to CBD

DescrOf course it is important - for access.
Paracetamol and other common medications are freely and inexpensively available, and can be abused and dangerous if misused. If clear guidelines are provided for CBD and become part of wide community knowledge, with strict manufacturing oversight, there is no reason why it should not take its place on appropriate shelves for sale to the public.

There are too many narratives about the beneficial effects of CBD to ignore, and enough research and practice in other jurisdictions to encourage its access in Australia. It should be freely available and the personal choice of those who wish to use it, not only by Pharmaceutical prescription

Only publish my submission on the TGA website with confidential information redacted.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have multiple chronic illnesses, including fibromyalgia. The only times I have been completely pain free in the last 20 years have been when I was given morphine (fractured spine, heart attack), the "green whistle" (partially bulged disc), or the few times I tried smoking cannabis (I'm not actually a smoker). I live with chronic pain, taking Panadeine Forte or Mersynofen as needed, which isn't ideal as paracetamol affects my liver. CBD would help with pain, stress, anxiety, and sleep; greatly improving my quality of life.

The price is very important as Australians on lower incomes should be able to access CBD the same as people on higher incomes. A higher price would mean I would have to stop some of my other supplements, which would have adverse effects on my health, or reduce how much food I can buy.

The public needs to be able to access CBD easily, ideally through chemists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have seen the remarkable benefits of CBD oil use in many people. I have seen those with severe, chronic pain being weaned off their opioid painkillers over a period of six months, those with tremors and shakes having those reduced dramatically -or stopped all together, and those with the diseases we are not allowed to mention here showing signs of improvement to dramatic. With reference to the emotional state I am not permitted to mention here, those I've seen who have had their chronic pain drastically reduced due to CBD oil use have found their emotional disposition has greatly improved-and why wouldn't it be as they are not in the pain that they were in. I am concerned that some suppliers of health-care supplements were forced to stop supplying CBD oil due to credit card providers not processing any orders that had CBD oil in them which is not their right to do so. I welcome an open system of supply with sound general guidelines and warnings but allows adults to make up their own informed decision of what they choose to put in their bodies. I am also concerned though about the lack of sound guidelines that allow people to determine whether CBD oil is suitable for them, how they should critically evaluate a CBD oil product (like how to work out concentrations, product comparison etc).

DescrI would be able to afford it and lower prices means the people who could really benefit have greater access. It's a "no brainer".

If the second option isn't adopted, make it available like any other supplement. Without the THC, what's the problem. I know a low-cost, effective natural pain reliever that is likely not to have the side effects of pharmaceutical pain killers may be a potential blow to the profits of the drug companies, but I am more concerned about people before profits.

Only publish my submission on the TGA website with confidential information redacted. name, location, e-mail address. State is okay.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I have heard nothing but amazing things from friends and close family that have used it, and that's not including the thousands of people in forums online that vouch for it. Anxiety is huge in the world and CBD can help massively, I know it helps with cancer too as I've seen it, Parkinson's, mental health, epilepsy, endless list and that's just the medicinal side of the plant. Not the use of it for resource substitute that also should be tackled. It can also be used for healthy people for peace of mind as a preventative medicine for problems that could arise in their future. We currently use synthetic drugs that only mask problems or postpone but they don't tackle the root like CBD. This should be the era of the super plant, the era too genuinely help people's problems. And I would love to see a healthier, happier world.

Describe I think it's like this everyone wants a Tesla to save the environment and cause it's a super fast car but no one can afford one so we resort to what car we can afford with our options. We want the best for our health and the cheaper CBD is the more people can have access to it and live a better quality life.

I think the best way to access it would be a chemist where you feel comfortable picking up medicine. You could create dispensaries for CBD, it would create jobs but it would also cost money to build them. Online store and delivery would be a convenient way to do it for sick people. Maybe you could set up an online code, passwords over the phone or in person so people could access and order it for them and only them.

Do not publish my name or my submission on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A family member and some clients (I am a Rehabilitation Counsellor working with seriously injured people with physical and psychological complaints) have used CBD oil and report some benefits. These people are interstate and I am not 100% sure if it came from a pharmacy and with pharmaceutical advice or elsewhere. However, they have reported benefit and I think it would be great if this were more widely available and known about.

DescrYes. many people with these chronic conditions have less money due to their work being impacted. and constanly paying for a range of other treatments. It needs to be affordable.

It is important to have clear information on the label, concentration and purity control and information about therapeutic doses readily available. I would not want people wasting their money on a sham product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been using CBD oil for several months, for general health, and symptoms of menopause. I have found it to be beneficial in easing my symptoms of menopause (i.e mood swings, poor sleep patterns), and have been feeling generally better since taking it.

DescrThe lower the price the more accessible it is to all Australians who want to use CBD. It would especially helpful for older people who are on a pension, and people who may be out of work or on a reduced income to due to their health.

The more widely available CBD is the easier it is access, therefore it should be available from health stores, chemists and wholistic practitioners to give people easier access, but also be able to get advice from people who have knowledge on CBD.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a sister who has used CBD under a doctors guidance and had great results. It helped resolve a "tick" or muscle spasm which was causing her great pain. She has now had to resort to using hemp oil which is nowhere near as effective and in greater doses which causes other issues (it is an oil after all).

I know other people who have had an opportunity to try it and have had great results for arthritic pain and other pain in general.

DescrThe lower the price for CBD the better. It is low risk and i believe that every Australian deserves access to such a useful product. Many people who would benefit most are not affluent or earning a lot of money, if any.

Pharmacy's, health food shops, supermarket's.....and of course online. Put it right next to the fish oil!

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A family member has struggled with anxiety for a long time and had tried many medications which had horrible side effects and didn't work well at all. After a year taking CBD their mental health is very good and they are living a high functioning professional life. Another extended family member travelled from their home country where they can access CBD, to Australia. Of course they left their CBD at home and within 1 week of their arrival began suffering painful arthritis symptoms in their hands which the CBD had been controlling.

DescrThe price is of course very important. Already many Australians have reduced access to all sorts of health care due to financial constraints and CBD must be affordable for all budgets. It is pointless otherwise.

People need to be able to access CBD in as private a setting as any confidential doctor visit. There would be stigma attached and privacy and ease of access is paramount. I have no problem with registered online business trading . I would not advise a dispensary approach as with methadone.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I currently order CBDA oil for high level anxiety and depression and it is extremely helpful. It would be extremely difficult to use this in an unsafe manner and could help millions of people. It should be more widely available.

DescrCost is important as so many people who would benefit from cbd oil would be on reduced incomes due to lack of capacity for work.

There should be different concentrations to suit severity of symptoms and bmi. Peoples tolerances are all different. A better mental health system to trial cbd oil for mental health conditions with monitoring that is outside of the 10 medicare sessions. More training for health workers.

Pharmacies should supply over the counter, health food stores, and the public should also be able to order online through private companies.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD, but would be interested in trying it to relieve anxiety and reduce stress. I have family members who believe CBD will assist with pain management and overall quality of life. I believe a pharmacist-only approach will ensure that Australians use CBD in a safe and controlled manner. Having this approach will allow people to access CBD in a streamlined and easy to understand way.

DescrAs a student, I do not have a high income. If the price of CBD was at or below the current PBS maximum price (\$41), many Australians including myself would be able to afford CBD. If prices were higher than this, it would be a struggle for those on low incomes and pensioners to afford CBD

A website for people to find out information on the benefits and risks of CBD, how to purchase CBD and other helpful information.

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Thursday, 21 May 2020 1:39:45 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

We need low cost access, my cannabis therapy costs over \$15k a year!

DescrMy cannabis therapy for my C-PTSD, a result of 17 years of horrific child abuse, costs over \$15k a year! It has been the only effective medicine for this condition. Why should I be punished more, my abuse was enough...

Allow us to grow cannabis, it is a part of nature that should have no legislation around it. It is as ridiculous as suddenly saying parsley is illegal and creating laws around parsley!

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been suffering from CFS fibromyalgia, chronic pain, chronic migraines and sleep deprivation for years. I had an opportunity to try CBD oil overseas and my life changed at that point as I realised after at least 10 years of suffering from Insomnia, I started sleeping and my pain levels and fatigue improved. I believe people like me are being deprived from means to get better. My life has been miserable due to my chronic condition affecting all aspects of my life. I know CBD works! Please please please please please do not deny or make it almost impossible, or make people to look into black markets for the CBD. There is too much evidence that CBD helps with certain health issues with no side effects and knowing that people will be looking for CBD overseas or in black market for CBD that might not be a quality product. Thank you

DescrThere are many people that are unemployed or disabled due to illness. Expensive and convoluted approval process (paper work, specialists reports, doctors etc) are only adding to financial and emotional despair. It's absolutely out of reach for people living on government support at \$40 per day. They can't afford going via lengthy and expensive approval process, as they often live below poverty line. It's a vicious circle: you are sick you don't work you are poor and you get worse and can't get better. CBD should be made easy Li available at an affordable price.

Allow trained Medical

Professionals, doctors, naturopaths in wholistic centres, integrative doctors to assist patients and to determine the right doses as not everyone knows how to take CBD for a specific condition.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to

seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have experienced mental illness. I have hemp oil but it is not pure CBD. It works but the effects of it are rather mild. Maybe a purer form of CBD could help me with my issues.

DescrIf there could be a way to get CBD at Chemist Warehouse I wouldn't care so much about price as they offer afterpay anyway.

CBD should be available like fish oil in chewables, capsules and tablets. Liquid CBD should only be available to people who are willing to take a trial like the drug clozapine which is usually trialled for a week before confirming dosage and efficacy. This also helps to verify CBD's negative and/or positive impact.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Hemp based CBD oil such as the one sold by Elixinol had helped with my chronic fatigue symptoms such as constant tension headaches due to long term poor sleeping habits and constant stress. With CBD oil I felt more focused and alert along with reduced in the pressure from my headaches which helped with my concentration at work. I generally felt less stressed hence improving my well-being as a whole which allowed me to break some of my bad lifestyle habits. I found CBD very useful for me and is a very beneficial supplement for the human body, since it works by activating receptors in the brain and nervous system which is the endocannabinoid system in our body. The primary receptors CB1 are found throughout the brain, central nervous system and peripheral nervous system which moderate mood, memory, motor functions, perception of pain to name a few, it is no wonder that it had benefited in relief of my chronic symptoms and improved my ability to function on a day to day basis. The other CB2 receptors are found mainly in the immune system and gut which help moderate inflammation and immune functions against pathogens which is supportive to the general well being of our bodies especially as we get older.

I followed the dosage on the label closely and was in constant contact with Dr Philip Blair MD for advice and guidance for any questions that I had. I would like to encourage the TGA to make CBD widely available especially when hemp based CBD contains only trace amounts of THC where the amount is so small there is no psychoactive effect and unlikely to register on a drug test. Most of all CBD is beneficial to human body especially those who suffer from the symptoms associated with chronic fatigue like myself. Right now I still suffer from the symptoms of chronic fatigue and it's not improving so I would like to be able to access CBD easily, widely and at lower prices.

Other than that, as with any supplementation or medication it is common sense to follow the label's dosage instructions closely and follow the advice of trained professionals. Feedback and reports from the community to researchers will also be beneficial for the TGA to be able to review the health effects of CBD in the future.

DescrLower prices will make CBD affordable to all and if CBD is widely available but only at high prices then even if it useful for me I won't be able to afford it for the long term to alleviate my chronic symptoms. Making it widely available will ensure Australians can access local CBD products which are 100% Australian made to support local products and those that are made in high quality without the need to order products internationally or import cheaper/inferior products from overseas.

Also hemp is fast growing plant and there is not going to be a scarcity of this plant, there is no reason to price gouge consumers with CBD products once it is widely available to all.

Australia is already a leader in hemp products such as companies like Hemp Foods Australia with its sister company Elixinol which sells CBD products in USA. Australia should be a market leader of CBD products and the best way for the public to access CBD is to make it widely available through chemists, vitamin, health stores and online stores without the need to consult pharmacists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

If available, I would like myself or my loved ones to try CBD for stress, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used legally-obtained CBD in regions such as Europe and Canada, where these products are widely available through dispensaries and other outlets. I've never enjoyed smoking cannabis due to its effect on respiratory health, nor do I enjoy the "high" of its THC component. However, in using CBD products such as oils, I have found it greatly beneficial in aiding sleep and reducing occasion joint pain, with no noticeable undesired side effects. A number of friends who participate in activities such as weightlifting also find great benefit in CBD products for its ability to supplement muscle growth by reducing cortisol levels in the body, and for general stress relief.

Whilst I would support further research into the effects of CBD, at this point in time I believe that, on balance, the ability to obtain CBD would provide more benefits than detriments to the Australian public. As such, I would support lower prices (or rather, a range of prices) so that all Australians would have access to some form of CBD if they believe it would be of benefit to them.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a Natural Health practitioner I would like the opportunity to use high quality CBD oil to help my patients with chronic debilitating pain without the side effects of long term opiates that are prescribed medically.

Lower prices make Plant based medicines more available for the lower income person who is more likely to be in need of them due to a chronic stress lifestyle that is common in this socio-economic class.

These medicines should be available to Natural health care practitioners who are trained to use them effectively such as Herbalists, Naturopaths and Homeopaths as well as pharmacists who have done the appropriate training and skill to do so.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

As a pharmacist I am already aware of risk associated by self medicating. However I and many of my 60 year old friends sharing common experiences of back and joint pain. I believe the nature of small doses and minimal adverse risks associated with using CBD render its use of greater merit for me and my generation of pain sufferers.

DescrAs a retiree I, as well as most of my friends, are pressed to rely on modest or fixed incomes for our living expenses. Pain relief holds a high value in contributing to a good quality of life. Accordingly the higher the price the more my overall lifestyle is compromised.

My views over the use and access to CBD are somewhat coloured by the practices of other countries. I feel Australia is rather behind the times on the distribution of CBD and that the minimal risks ascribed to its use further diminishes the arguments for restricted access.

Do not publish my name or my submission on the TGA website.

Having suffered from anxiety and being lucky to have spent time in the US I have had access to CBD freely and it has been very beneficial for people who have struggled to sleep well, and deal with stress/anxiety. I also felt it improved mild pain from nerve damage in my shoulder. Considering many states in the US and nations in Europe have already done this its not exactly a brand new world. The change for me would be profound as I have struggled with treatment here in Victoria.

DescrIf the price is too high people will use illegal means. Which reduces the effectiveness of our health system.

The simplest and cheapest process will be the best. It gives people little to no reason to source illegally.

I suffer daily with Rheumatoid Arthritis and would love to try CBD oil. My cousins daughter has brain cancer and since taking cbd oil she has regained movement, started eating again, putting on weight after being told she had 2 weeks to live. She has now kept fighting and is happy for almost a year since being given her 2 weeks to live

DescrLower prices would make it affordable to me as a stay at home mum due to my disability

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I was diagnosed with ankylosing spondylitis back in 2014. I have been on various medications, steroids, anti-inflammatories, pain meds, suppositories etc. I am now on immunosuppressants which has changed my life, but even with my biological medication I still suffer from mild pain. Other patients in America have spoken so highly of the incredible effects that CBD oil has had on their AS symptoms and associated symptoms (e.g. insomnia, anxiety). At one point I got desperate and looked into how I could obtain some illegally. But I have never done something like that in my life before and I got scared and chickened out. But when you're in that much pain and waiting on various tests and Medicare processes to come back you seriously just want to try anything. Also I've had reactions and side effects to so many of the drugs I've taken over the years I've been on a constant search to find something that's more natural. If CBD oil was available back then, I definitely would've tried it as an alternative to help with the pain that I experience everyday. Especially given the remarkable results it's had in America. If it becomes available now, depending upon the restrictions that may be associated with it, I would consider it as something to help manage my pain, insomnia, anxiety and panic disorder moving forward.

DescrIt needs to be affordable. There are a cohort of people that have been desperate for this medicine for years, and that's what it is, it's a medicine. If the price is too high then what is the point in making it available! When I looked in to sourcing it illegally, not only was I too scared, being that I've never broken the law before in my life, but the cost of it was too much strain to put on my husband and our family. I don't know what the cost of cbd oil should be but it has to be something that the average family can afford. Your talking about people using it for mild issues such as mild pain and mild anxiety, these aren't big things such as cancer, be realistic and in comparison to what we would pay for OTC pain medication.

This is progressive and a step forward for Australia and its citizens. I understand the need to be cautious. But we're not talking about the psychoactive part of cannabis, so please don't bring CBD oil here and then whack a crazy price on to it which makes it so out of reach for

the people that actually need it. If we're going to do this, do it for the people that need it, and do it right. Thank you.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My husband has had good results with using CBD oil to reduce the number of migraines he has. I would like to try it for mild anxiety and that causes IBS symptoms.

Descr

The high price of the CBD oil is preventing my husband and I from gaining the great health benefits it provides on regular basis. I also want it fully approved so that there are controls to ensure we are buying higher quality oil.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a health practitioner, I believe natural medicine such as CBD would benefit a large proportion of people who are experiencing mild pain, and would like to take a natural derivative that could help them with relief without resorting to Panadol or nurofen. The pathway of CBD is different to these existing pain relief and it may provide relief for chronic pain without enduring possible side effects of damaging the digestive tract of taking ibuprofen or Panadol for a long period of time. It would also provide moderate stress and anxiety relief for mild pain sufferers, which often occurs for chronic pain patients without them having to ingest a separate medication or supplement for this condition. Patients would feel safer purchasing from a pharmacy without having to be recommended by a GP who may choose NOT to provide them with this new type of medicine due to their beliefs.

DescrAccessibility of price structure is important as we can see by the number of patients reliant on PBS and on health cards for medication.

Do not publish my name or my submission on the TGA website.

I would use CBD in a safe way and read the label and warnings.

I have used CBD to assist with pain management, help me get a restful sleep and calm me down. I only wish it was freely available and cheap and no stigma attached to its use.

DescrCBD could help many Australians with their management of pain without dangerous side effects. A lower price and legality would be a godsend for those who need it on sickness benefits or the elderly that cant afford the consultation price nevermind the high price of CBD oit itself.

I feel over the counter at a pharmacist is probably best so the purchaser could get the full run down on usage and doses.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been prescribed low dose CBD oil for insomnia and have been taking it for a month. I have noticed a huge reduction in background anxiety and a complete lack of hyper vigilance since I started. I was not aware of how tense I was until this medication allowed me to feel calm. My head is clearer and I am generally less fatigued. The cost is prohibitive though and I won't be able to continue with these significant health benefits as I won't be able to afford to continue to take it. I would welcome more readily available and less expensive CBD oil that is of high quality. The benefits I have experienced have been outstanding. Please support access to CBD being more freely available.

DescrI'm struggling to pay the \$350 for 25mls at the moment and will not be able to continue to use it. Lower prices would mean that I have continued access to a product that is improving my quality of life.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

By easing my pain and enabling me to increase my confidence CBD could enable me to return to a lifestyle I enjoyed, while becoming less of a burden on my family. If I am able to achieve a restful nights sleep, I would be better able to cope with what the day held for me. Guidance from a responsible source (eg dose, strength, and any warnings regarding drug interactions) would be important to provide a basis for my regime. I would be happy evaluating my reactions to CBD to help other people who may be in a similar position to myself. I would have tried this already if it were not for the cost (\$), and concern about quality control.

DescrNot every drug works for everybody. If a high quality CBD is made available at a low price the people who need it will be able to see if it would work for them. Therefore quality of care available for all.

If the price of CBD remains high, than many won't be able to afford it. Personally, as a pensioner, I think it would make the world of difference to myself and my family. Our financial situation is such that I can not justify spending so much on a drug that may not work. Only by trying CBD can I know if it will help. If it does have a positive outcome then I need to be able to afford the ongoing cost.

I personally feel that the best way to make good quality CBD available at a low cost would be by PBS prescription or Chemist Only supply. This would address:- 1) Decrease demand for illegal supply. 2) Available to the people who need it. 3) Advice available regarding drug interactions and side effects, dosage and how best to take it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

An aunt used CBD oil and recovered from an grave illness with no side effects. It was a eight month journey that we carefully monitored and recorded.

I believe high grade CBD should be available to all Australians at a reasonable and affordable price for all because all humans have a right to make decisions for their own body and health and have a right to access therapies such as this that have proven to work.

I believe that big pharma should have absolutely NOTHING to do with it. Definitely controlled by FDA but accessed through qualified natural therapists..

Do not publish my name or my submission on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have lower and mid back pain as well as bi lateral knee pain from military service, my ability to obtain a good nights sleep has been impeded by my pain and discomfort. I have weekly physio and chiropractic sessions to relieve the symptoms I am disinclined to take prescription meds due to the other problems they cause and would fully support using CBD I have used some CBD from the US with some pleasing results. and would appreciate the ability to obtain CBD in Australia to assist myself and countless others in my situation

I think the price of CBD is important for Australians if it is priced too high certain demographics will not be able to afford or obtain the oil, creating a blackmarket and potential inferior or tainted product. The price must be within the reach of the average Australian's affordability to buy over the counter.

The best way for the public to access CBD would be over the counter at health food and chemist shops or alternatively online.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Feel less pain on my feet and shoulder from work. Feel less stress at work and more easier to get a long with my co worker.

The price is too high will be great if it can be more widely available and more cost effective. I paid \$315 aud for a 30ml. It would be great if it can be at \$ 80 or lower. Since not many competitors so company can monopoly the price.

I prefer to buy online since it provide more privacy. People will think and have negative opinion when they see someone purchase cannabis, since it link to be related to illegal drug for many years, as the public still un aware about cbd and their benefit.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I did not use personally CBD oil but my friends in America who are going through the stress and trying to manage chronic pains told me that this oil has been a life changing experience.

As much as I read about CBD oil I more and more is sure that it is safe to use, as it is not showing any side effects in case of using for pains and stress.

I hope we in Australia will have it soon as well, because we do have lots of stress, pains, anxiety- specially in this time of COVID19.

I think who is in need of CBD oil is also vulnerable people of our society, who does not have much money and they are the ones who have stress, anxiety and they can not afford it if the CBD oil will be very expensive

I think it should be free to sell or buy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had multiple spinal fusions - long term use of opiates have many side affects. I have had some pain relief from using CBD oil with no side affects. I have researched the best way to use it safely without pharmacists advice. I would like to be able to purchase this safely, easily and within the law.

Price is of the utmost importance as many people can no longer work because of their health issues. Lower prices means it's available to everyone who can benefit from CBD without depriving those with less funds.

The easier and more widely spread the access of CBD is, the more people it can assist. CBD may not work for everyone but everyone should be given the ease of access & lower pricing so they can try it if they want to - without difficulty or prejudice

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Im curenly in the middle of this outbreak pandemic along with many people around the world. Having myself locked up inside my own space, sometimes it's very stressful. The lack of conversation and social interation somehow drives me crazy. I do believe that the consumption of a low dose of CBD could help a lot, it should be the same as smoking cigarettes, which would relief external pain as well as internal problem such as anxiety.

I believe the price for CBD, or any other products, would affect people including myself a lot. I think the solution is that, the price for a low dose of CBD should be low, as it could help people reducing stress, however when you are to buy a much higher dose, the price could be much higher to prevent overdose.

I think the best way to legalise the use of CBD is to sell it in public like tobacco or cigarettes, and each person could only buy a certain amount of CBD.

Only publish my submission on the TGA website with confidential information redacted. Do not publish my indentity, personal information of any kind

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been using cbd for mild pain and anxiety and my quality of life has improved dramatically. I would like the option to be able to buy it without the THC.

It needs to be affordable for everyone including pensioners. It should not be a rich persons drug.

I believe it should be easily accessed by all adults. The improvement to my quality of life is indescribable. Everyone should be able to choose this natural alternative.

Only publish my submission on the TGA website with confidential information redacted. My name as it could impact my employment.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD oils and I believe I have seen positive effects on sleep, anxiety and muscle aches and pains.

I think lower prices are important as CBD use could be beneficial for low risk things. It could be used in a similar way to vitamins and supplements which means low cost is important

Over the counter but with no prescription required is a great way to provide CBD to people while still requiring them to talk to a medical professional.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I frequently travel to California for work, and have tried CBD in several forms whilst in the USA. I find CBD helps alleviate symptoms of my Crohn's disease, helps with my anxiety and I also sleep much better.

I think all Australians should have access to this drug, it should be treated like alcohol & taxed as needed to help the economy.

Lower prices would allow me to use CBD as needed during flareups of my Crohn's disease, or during times of stress (like during a pandemic).

Also, low prices would reduce the need for people to source marijuana from criminal networks, as it would be freely available. This would also free up time for local law enforcement to deal with more serious crimes.

I've used CBD while overseas in Europe and it helped my pain and sleep so much! I think everyone should have the option tho high quality cbd! I've seen it change people's health for the better!

I think low cost and high quality is important because it makes it available for people who already have such high medical fees to be able to try another option!

I would use CBD in a safe way and read the label and warnings.

The proposed changes would allow me to support my well being through easing mild anxieties. I have been living overseas until recently and was able to obtain cbd supplements and found they made a massive difference - making it feel easier for me to approach situations that I've otherwise found to make me anxious. My girlfriend also has IBS and has to manage it through a very restricted diet which makes it difficult to go to social events or even just out to dinner at restaurants so if cbd has potential to ease these symptoms that would definitely change our lives for the better.

Higher prices for cbd would put it out of reach of a large portion of the population which would not be a desirable outcome. It should be available in the same way as other herbal or vitamin supplements, so a reasonable price determined by the market and it's producers

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't used CBD for health concerns. I would appreciate being able to use CBD for health concerns. Our bodies were seemingly accustomed to ingesting CBD a long way back in history as our bodies have Canoboid receptors. Uptake and processing mechanisms to ensure the natural plant chemicals are used efficiently by the body for it's optimal health care impetus. Marijuana plants are, according to my readings and understandings, the world miracle healer. They are seriously amazing like a gift from Heaven. People now have isolated the CBD oil with the intention of potentially easing much distress due to this capacity to bring balance back in terms of physiology and well being. I would use a careful dose for my grandchildren with their parents permission.

Ofcourse the pricing is very important. It's ironic that the people who would most benefit from CBD are restricted often in the amount of income they can earn due to health concerns. Hence they may not have the funds to access plant's oils, I don't understand why this question is asked. I assume the TGA know that high prices are prohibitive to low income earners who are more likely to be in the disabled. unwell demographic. and would be in the group of citizens who are most likely to need it

Paracetamol can be deadly if double the dose is taken. However it is sold on supermarket shelves. Why would people be irresponsible with a plant oil if they are generally responsible regarding a synthetic drug? CBD oil may be sold in pharmacies without restrictions or the need for a lecture. After a trial period of 5 months then it should be considered as a health remedy that could go on supermarket shelves. Has there been realistic deliberation done about potential misuse.? I cannot see how there is a need to treat it as a dangerous product, with danger far exceeding that of paracetamol.

I would use CBD in a safe way and read the label and warnings.

This is really for my mother, she has pancreatic cancer, she takes S8 pain medication, and antiemetic medications regularly, for pain and also nausea and is palliative, If we could give her CBD and it helped with pain and nausea with a natural drug (cannabis) rather than the synthetic drugs that can be addictive that sounds like a great idea. I personally suffer from chronic headaches, if I could take something natural over the medication I take now while suffering an attack I'd like to try that too.

If it was priced in such a way that it was ridiculously expensive I and my mother just wouldn't be able to afford it, but if it was priced like our current medications that would be affordable and a great step, to getting people potentially off dangerous drugs and in something natural

I would use CBD in a safe way and read the label and warnings.

Although under funded and researched I have had massive improvement in life quality by treating my aspergers with CBD. THC also helped but when isolated CBD worked well by itself. It also has a greater effect on pain than most other pain medication I have used. This was under unofficial consultation with a doctor who was advising me what dosage and time i should have taken it. I was also deliberately focusing on CBD not THC

CBD pricing shouldn't be relevant as it isn't psychoactive, therefore it isn't a drug per say. It's medicine that doesn't have any noticeable affects on the mind like THC does

I also believe that THC should also be available. But that should be regulated higher than CBD due to its effects on people. Overall I think that mail order of these products would be the best for Australian all over the country to access this medicine

Only publish my submission on the TGA website with confidential information redacted. address and email and name.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, general health and wellbeing.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My aunty has severe joint and back pain and uses it topically. Her quality of life has improved immensely. The proposed change will make it easier for those in the same position to have access to CBD safely and be able to enjoy life

If prices are too high it can become difficult for me to purchase and try the product.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used CBD oil when I herniated discs in my lower back. It was extremely effective for both pain management and healing.

CBD oil needs to be priced so that all people have access to it. It should not be a prescription only medicine.

Anyone should be allowed to sell it.

Only publish my submission on the TGA website with confidential information redacted. My name and address

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My husband suffered from PTSD and pain for as long as I can remember. Cancer and abuse in the family of origin resulted in very poor life quality. He is now being treated with CBD by a qualified doctor. It has been a life changer for him and for us. I wish this sort of treatment were available for everyone who needs to cope with chronic stress or pain. I come from Europe where it is freely available. I don't understand the hesitation here to offer relief through CBD.

CBD has been proven to be effective for PTSD sufferers. I think it should be made available at lower prices so that more people can get their lives back.

We should learn from European countries where it has been available for years now. I bought CBD in a health food shop in Holland and had a refreshing sleep. I can only see benefits, especially after having witnessed the improvement in my husband who suffered from PTSD all his life. Why should it not be available for ordinary people who need help with pain or stress management?

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a good friend who had to move states in the US to access CBD treatments to manage her seizures as the typical medication prescribed had her hospitalised regularly. This is the first time she has had respite. I believe that it is a better approach to managing chronic pain and illnesses than alot of available medications.

I understand the potential for introducing CBD at a higher price to limit abuse of the therapy, however it should be affordable for those who are able to prove their chronic illnesses would benefit from the treatment.

I definitely agree with involving a pharmacist to help with screening potential users of the treatment, there does need to be an educated third party to inform the public prior to use, and ensure they are accessing CBD for the right reasons

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed change will impact my maternal grandmother who is exploring use of CBD for vascular related pain. Her long term use of paracetamol is damaging her kidneys, and opioids are becoming less effective.

Higher prices would make it less accessible for many, perpetuating the use of opioids that are PBS supported.

The best way for the public to access CBD would be like other over the counter medicines; clear directions on label and warning label that says "no THC" and clearly states the product will not get you high, no matter how much you take.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My friend needs it to treat seizures. CBD is the first thing prescribed by gp's for seizures in Canada, and has more success with less side effects. I believe both CBD and also whole plant products and tinctures such as terpenes and other cannabinoids etc should be completely legal. If it doesn't have THC in it, then it's not psychoactive, and therefore not a drug. In fact, a lot less of a drug than the pharmaceutical alternatives, that don't work anyway. Why are the claims of pharmaceutical companies regarding effectiveness of their products not questioned or considered in a legal sense?

Isn't it obvious?

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would not use CBD in a safe way and will not read the label and warnings.

This would change my life. I sadly have, have to resorted to using dirty medicines like valium to help my anxiety and severe sleep insomnia. I have used CBD without a pharmacist's advice and that's when I knew all Australians should be able to have access to this. If CBD was legal and more accessible I would NEVER have to use sleeping pills, benzos, ever again and that is life changing in itself. The public deserve CBD, its medicine and I am scared of staying on sleeping pills and valium for the rest of my life. This gives me hope that maybe Australia can look past the failed drug war and see how CBD benefits millions of people.

Prices of CBD should not cost much money, but if it does I am sure Australians will buy it and less drugs like valium and painkillers will be given out as CBD can substitute them (given the person)

I think the best way would be, 18+ years of age can purchase behind the counter, minors only with a doctor's permission.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Date: Tuesday, 19 May 2020 8:57:55 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer a condition called proctalgia fugax which are severe spasms of the bowel. This effects me around 6 to 10 times per year and is debilitating for around one to three hours. No painkiller or medicine on the shelf or by doctor has been able to stop the spasms and available prescriptions did not help me. I resorted to trying CBD via a friend who uses it for epilepsy and it cures my spasm within 10 minutes of taking the CBD oil. I am a very healthy person in a professional working role and I do not use the CBD other than for this purpose. It allows me to go to work when I experience these spasms and my sick days are less because of this. I believe Australians would benefit from hybrid C option so that minor or major health issues can be managed by this natural medicine. Above IN CONFIDENCE.

To buy CBD should be at a fair cost. Ie. Not hundreds of dollars for 30 days supply but perhaps something fair like \$1 or less a day. This way it would ensure it is not used unnecessarily.

This is a naturally grown plant, no THC is present and therefore it will not effect people from driving or performing their daily lives and jobs. I do not support a synthetic made CBD.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD for mild joint pain associated with Ross River virus and did not find it of any benefit myself however I do know people who have gained relief from mild pain but stopped using it because of it's high cost. I researched it thoroughly before using it and can see that there are validated success and relief stories but that there also needs to be checks and balances in place. I would love it if Australia could be in the forefront of research and developed of CBD as well as being able to buy it for a low cost from any healthcare practice or store including pharmacies. Not everything needs to go through the big pharmaceutical companies. I live in an area that has licensed CBD producers and feel confident in the knowledge that they have well and truly done their homework in regards to it's safety and uses before investing huge amounts of capital into their CBD venture.

Thank you for reading my statement.

I definitely would use CBD again if the need arises and would love to see it sold for a lower price. There is no reason that production of CBD could not become a large industry here as we have ideal growing conditions and practices. People who suffer constant pain are generally people who's lives are diminished somewhat eg less work, less money and high costs of other drugs and services so it is my belief that any pain management should be provided to people at the lowest cost that is viable for the producers and the manufacturers and having many companies doing that would increase the competition and keep the price down.

I would like to see CBD available over the counter at any healthcare practice or store and though naturopaths and other holistic practitioners including GP's. Though physiotherapists and movement specialists and any other practitioner that deals with pain management. I would like to see the products properly labelled with recommended doses by the manufacturer.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

It will allow us to access cbd oil to assist with my husbands health condition and it would be helpful for my pug who suffers from a range of conditions. It is currently an option that is not open to us living in Australia, and yet people in USA can buy it easily (and probably many other countries in the world). We use a range of herbs and essential oils which are all natural, why should cbd oil be any different? Just because it is linked to a plant that is used for other properties doesn't mean that we should dismiss the healing properties that are well known by many health professionals worldwide. Please let the Australian public have access to this medicine which will help improve lives. I have been told where to access it but have not used that option, but I'm certain that others are - and the result is that people are buying a product which doesn't have any regulatory standards in manufacturing and have to hope that the quality is there. That to me is a higher risk to the public than being able to buy it from health stores, getting advice about it, knowing that companies adhere to quality standards and testing and not being sold something of variable and questionable potency,

I think the price is important so that everyone has a chance to access it. , it should not be just for the rich people.

Health food stores and naturopaths.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a loved one with chronic pain and strong, expensive medication which sometimes work.
She now uses the CBD oil from time to time to help with pain relief.

this is something which shouldn't be a money grabbing exercise for business. This should be something which is available for anyone who wants it. keep the prices low for anyone who wants to try it can.

If people wish to use a natural product over a chemical it should be encouraged. Don't be frightened by big pharma. Make it available for the people of Australia.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I use cbd now, at a low dose for pain management and anxiety. It works extremely well but I would like access to cheaper controlled oils

Cbd oil can cost a lot, and isn't regulated when imported. Who knows what you're getting. It would be beneficial for Australia to test and sell its own cbd oils at a lower cost with higher standards.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have a rare neurological disorder (Mal de Debarquement Syndrome). In the US, and in Europe, medicinal cannabis products have been found to bring significant reduction in symptom severity. I'm frustrated that I can't access CBD products in Australia. I believe it offers huge potential for a range of conditions and access should be more liberal.

As a retired person, I am very price-sensitive, so lower prices would help.

Please consider the US model.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe it should be readily available at a low cost, as generally those who would most benefit from it are those who probably are already struggling to make ends meet due to requiring lots of medication to control their pain.

many who have chronic pain are on disability pensions, so don't have much money. lowering the cost of CBD would allow them to be able to afford the cost of relief.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Two & half years ago I developed headaches that are there all day long , 6 months later I then developed migraines. I need medications that long term are not good for me though cannot do without if I want any quality of life . I am under a neurologist & he doesn't know why. As I am a pensioner I cannot afford the \$300 a month my nephew pays for his oil. Please make it available at a cost I can afford.

Lower price would mean I could afford to buy it & know the long term use would allow me to go off my other drugs.

I believe to have access to CBD you also need information not outdated regulations.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

We believe that since CBD has virtually no THC in it, it should be readily and easily available for people with pain, mild pain, sleep problems, anxiety, et cetera. I know of people who have used CBD safely and they had no side-effects whatsoever. Whereas pain killers have terrible side-effects, as do sleeping tablets. CBD also works very well for Animals and is widely used in the USA for this. The same should happen here.

CBD should be inexpensive. It would be marvellous if it was included on the PBS, so that those on low incomes are able to afford it too.

CBD could be made available at pharmacies, but there could also be little CBD shops as well.

My family have always suffered with chronic pain. Last year on a trip to the US my family trialed the use of a good quality CBD oil and found the pain had alleviated over a matter of a few days.

An affordable medicine would allow us to use the medicine for an extended period due to the chronic pain. Budgetary pressures is an important attribute to consider.

Low cost good quality medication is imperative and through competition low prices can be achieved.

I know many people who have used it medicinally where pharmaceuticals haven't worked or the side effects were too great. There's more than enough evidence world wide to show it can help numerous diseases/pain conditions etc.

A lower price obviously makes it more affordable and with lots of competition it will help the price stay low.

Let the market dictate like plenty of states in the US

Need suppliers who know how it works not pharmacists who only want to make a profit. Know from people overseas that family and friends that are dying horrible deaths here, don't need to be suffering in pain or undergo chemo and radiation because CBD in the right mixtures works without the side effects. Neighbour with Parkinsons had great results with CBD then can't get the same through medical approved - they don't have the knowledge to get the right mixtures. We need to have ongoing research as people get to use the CBD so the right info builds quickly.

pharmaceuticals are an industry not interested in health, so should not be involved. Sick people don't have the money so it should be on the subsidized list but price isn't an issue if it's not going to work because we don't have the skills needed to make the right mixtures.

CBD does not hurt people so it should be available freely through whatever pathway is interested in helping those needing it.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

As a sufferer of Ross River Fever with debilitating poly migratory arthritis if this was a proven drug i would try it under Dr advice. Having been put on strong neuropathic pain tablets and steroids i would have liked a cheaper not addictive medicine choice. My worry is if it was available freely over the counter people not always being truthful what meds they are on. I still think this should only be prescribed by Drs.

Price is important but so is quality of products. If its cheap is it actually going to be a useful option. Plus if its too cheap i do think people will just buy it for the sake of it.

If its not going to be by Drs then it should be behind the counter at pharmacies and only sold after advice from a Pharmacist.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have recently started CBD LEGALLY PRESCRIBED BY MY DR. This is for major pain, anxiety and mental health issues, I knew this would work as previously smoking THC had been a great help. I really don't want to smoke or take the drug in a form that could do more damage to my system so the oil (10/10 thc/cbd) is my preferred delivery.

The price of my prescription is about \$250 for 100 days supply, the cost of marijuana is a bit cheaper and easier to source

Via Dr is a good start, but the price and dosing abilities needs to be more flexible. On the PBS would be ideal

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My mother suffers from excruciating pain due to IBS, she hasn't been able to find relief as she is allergic to the main medication to help with pain with this disease. CBD has been proven to help with the symptoms of this disease but she is terrified at the idea of using it because of the current views in Australia with CBD. I would love for this to go ahead so she can live the rest of her years pain free with this illness

I think it needs to be an obtainable price so all Australians can access CBD

Only publish my submission on the TGA website with confidential information redacted. Information about my mum's health history

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I have used cbd oil legally in japan for 10 days while holidaying and my anxiety was nearly gone. I have never felt so calm. I have been on lexapro for years and still my anxiety and depression is bad. I tried getting off them and fell into a deep depression with horrific withdrawal affects. I had to go back on them to feel non suicidal. I hate all the side effects! I dont understand why this is such a big deal. There have been numerous studies about help with anxiety and pain.

I feel it should be made affordable. If pharmaceutical companies worry about going bankrupt why cant they just take over and sell to the public so they would still make profit

Try it yourself if you are in a country where its legal!

I would use CBD in a safe way and read the label and warnings.

I have used cbd oil without pharmacist advice and found that it helped with my anxiety, chronic pain & stress levels. I would prefer to get it through approved avenues because of the benefits but will go elsewhere if needed.

The CBD oil being available at a lower price would definitely help make it more affordable and easier for me to access. especially when my resources are already going on other health outcomes.

Being able to access CBD oil through our local pharmacist would be a great option.

I would use CBD in a safe way and read the label and warnings.

My 15 yr old son is being prescribed cannabis by his neurologist, for epilepsy. He is currently 18 months seizure free. After exhausting the spectrum of AEDs, CBD has been the only medication that has not caused complications nor has he endured side effects. He is prescribed cannabis as monotherapy. He has not only improvements in quality of life but managed to obtain seizure control. His seizure types are all generalised, including that of tonic clonic seizures.

CBD needs to be affordable for all Australians. Currently it is not affordable for adults with a prescription.

Affordability and accessibility should be a main priority.

I have not used CBD nor do I know anyone that does, but one of my children suffer from anxiety and my husband gets back pain & I have heard lots of good feedback when using it for these condition. Plus I am not into 'mainstream' medicine, so feel this would be a good option. I have also heard lots of people with cancer use CBD and if anything can help them, then it should be readily available.

I am unsure how about the dosage side of things, but believe that the best quality & dosage should be available at a price everyone can afford.

Good quality, readily available and at a reasonable price that everyone can afford.

I was just about to start using CBD oil however the government banned it in Australia. I was extremely disappointed. I hope it is made available again soon so I can use it to assist with pain management.

CBD has previously been very expensive to buy in Australia. I hope the government make sensible decisions in the future about pricing so all Australians can try it.

CBD should be made readily available to all Australians given it is documented to be safe to use.

I would use CBD in a safe way and read the label and warnings.

I am a registered nurse and aware of the complications of current pain management. The availability of a naturally derived pain relief drug would be of great benefit to me as I am now feeling the effects of years of wear and tear on my joints . I do not like taking the otc pain relief meds and want to avoid the heavier medications as long as possible as the side effects of these cause long term issues the older we get.

Higher prices mean less people would use and research would have a limited cohort. Everyone needs access to reasonably priced CBD

Please do not limited what may be a game changer in pain and chronic disease management. If it is not proved to be effective people won't use, however if it is as effective as the overseas research suggests this will introduce choice in disease management

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used cbd oil and would only use it if in dreadful pain as I do not take painkillers of any kind even for headaches because I would try natural remedies instead. My father died in 2016 from a long term illness and was in pain even with prescribed painkillers and he would have loved to try cbd oil to gain relief but it wasn't easily accessible so he wasn't able to.

When you consider the death rate of late from fentanyl and opiads surely a natural and less harmful cbd oil makes a lot more sense in preserving lives while giving relief especially if it can be shown to not be addictive or mind altering.

I do believe people often tragically overdose on prescribed opiads because they no longer work longterm. Cbd oil could change and possibly slow down the loss of life.

I think the price range should be in middle range. It seems that manufacturers of items that are in demand seem to have high price range putting it only into some peoples price range and leaving poorer Australians who may need it more because of no health cover. Maybe in some cases doctors could prescribed or write chemist a note for their patients who need it to access it at the concession rate.

Health shops could benefit selling it in this recession by helping their businesses too.

Pharmacies also could stock it behind counter to stop people buying multiples and price gouging.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would appreciate being able to use CBD for relief of mild pain in place of paracetamol, ibuprofen, codeine and other opioids. CBD is non addictive and according to overseas research, has been shown to have fewer negative side effects than the other pain killers. I have not as yet been able use CBD, but would welcome the opportunity to do so.

I am on low income, so a price in keeping with other pain killers on the market would be much appreciated. If it is available by prescription then It needs to be on the PBS, so it is within reach of those on lower incomes.

It should be available off the shelf in pharmacies, in health food stores, in supermarkets etc. Higher dose 'Practitioner Only' brands should also be available to qualified Naturopaths, Chiropractors, Osteopaths GP's and other allied health professionals for them to prescribe to their clients and patients if higher doses are required.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I would use CBD in a safe way and read the label and warnings.

A loved one has used CBD (overseas, under medical supervision) and has received great benefits to assisting with sleep and bowel concerns. She reports to have reduced the inflammation in her gut.

Prices greatly affect my ability to afford the right health supplements for me, so making this available at competitive prices will allow my family (and the community) to trial CBD and decide if it benefits our specific conditions. If it provides a solution, I will be less restricted in other areas of life, e.g. it may reduce time off from work due to fatigue (shift work in a life saving capacity, so fatigue is a danger to the profession)

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I had a lot of pain after a hip operation and opioids just blunted it but the pain was always there. I tried cannabis and within 2 days the pain was gone. I couldn't believe it. I was amazed. Sometimes when the pain returns I take cannabis and it's gone the next day. It's the best painkiller I have ever tried. I no longer need to see the Doctor for pain related issues. I read that in Colorado older people's use of opioids has decreased because they can access cannabis easily. I'm sure this would happen in Australia too.

I am a carer on a pension so it has to be a realistic price so that it is available to all

Date: Tuesday, 19 May 2020 8:23:13 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My husband has transverse myelitis (TM) which gives him uncomfortable spasms down his left leg & left arm. It affects his mobility & his quality of life. Sometimes he can't fall asleep due to the spasms down his left side. He also gets mild anxiety at the same time. He would like to try CBD to see if it can alleviate his symptoms & perhaps improve his mobility. He can't walk with me & our dog anymore due to the pain & discomfort from the TM lesion. It would be interesting to see if the CBD would work for him but he doesn't qualify for a script due to the stringent rules & it is also too expensive for us to consider as a treatment.

To have CBD more accessible price-wise would be a great thing for those Australians who need it. Having a medication with such promise, but so expensive it's out of reach, is very disheartening. High prices for CBD puts added stress on families who are already suffering from an illness or condition. Their financial situation will have been affected by the illness, let alone the high, prohibitive cost of the medications needed to treat the illness. Making CBD more affordable will allow a higher use by the ordinary population. This would also benefit researchers if more people are using the medication.

I think there are many Australians who would benefit from CBD rather than using other stronger drugs that have severe side effects and are not as effective.

It would be for the greater good of Australians to be able to legally & affordably access CBD. It's a cheaper drug to produce, it has fewer side effects than most other drugs & it should be more affordable to the general public.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I am four years into breast cancer treatment, I have constant joint and muscle pain, lack of sleep and IBS.....would love a safe natural remedy

Lower prices would be helpful for the general population

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have tried CBD for anxiety and sleep and find it very helpful on controlled small doses.

I have a friend that has had it work for irritable bowl syndrome immensely, saved her from surgery.

I think it's important to keep it fairly low and affordable as it would help many people with these common issues.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

After having cared for my partner, and having sourced CBD for him to reduce the otherwise high doses of oxycodone medication, I have full certainty that having access to the CBD in a normal fashion would have been one less stress to deal with during an already very stressful situation ,

The oxycodone at the prescribed dose was very detrimental and nearly made him pass out .

It was also very frustrating not to be able to discuss this part of his support with the medical team following him . The door was just closed . I was left on my own to find where to get it, how much to give him . This is not the way to handle such a difficult situation .

When there is an option much more friendly to the body, such as CBD, we should not be forced to consider a much more aggressive form of support such as oxycodone .

I wish for other people to have a better experience . I wish to have a better experience myself if I ever need this form of support . I do not want the risk of becoming addicted to a pharmaceutical to relieve my pain if I can achieve the same result without the risk of addiction .

If the price is too high , this obviously restricts its availability to a proportion of Australians . Health should not be related to wealth .

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I think CBD has huge promise if it becomes more widely available, however, I believe it should be controlled as so many people don't understand the differences between CBD and THC. There is so much positive research on CBD.

I think the price needs to reflect the quality level of the product. We want good quality products available at an appropriate price.

I would use CBD in a safe way and read the label and warnings.

We would really like to try CBD for stress and sleep and pain issues, to avoid relying on pharmacy pain killers, sleep aids and so we have a better quality of life being less stressed.

The price should be accessible to all Australians who are seeking solutions for their health. Both mental and physical health.

Accessing CBD from a pharmacy or other health practitioner like a naturopath would be good so you can ask questions if you have them, without the need for a prescription or appointment which can be costly.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I've found it very good for pain and years ago it was normal to be used

Because I don't like taking medications, and the side effects of medications. We should have that choice, especially when cbd is proven to help really serious illnesses. However, no point pricing it out of our reach. I'm a pensioner.

To have it easily available to buy

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I used low dose CBD for Back pain after compression fractures in several vertebra. Any pain medication available at supermarket or pharmacist without prescription gave me no relief.. The drugs prescribed for me by a doctor caused me severe abdominal pain and irregular heart beat.

The CBD eased pain enough so that i could sleep for up to 3 hours at a time greatly facilitating healing.

I felt a very significant increase in general health and sense of well-being.

If CBD became readily Make CBavailable at a low price I would use it when continued pain affects my sleeping patterns.

Make it available over the counter at Health Food stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used CBD in the past,(teenage) it helped enormously with relief from migraines. It was also very helpful for sleep as i struggle with insomnia. I had no negative side effects. I wouldnt use it now unless it was legal and from a safe source but i know it would help. I also suffer from anxiety and arthritis. I would be very keen to try this now as i cant and wont take stronger medications due to side effects such as nausea and a general feeling they arent good for me.

I only work part time due to health issues. Even medium coats would put it out of reach for me and most people with chronic health conditions. Let alone people with more serious issues please make it accessible. People with health issues dont need the added stress of high cost medications.

Pharmacy access and all g.ps able to prescribe. Or limited over the counter access for over 18s.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Personally know of people who derived benefits for pain relief, symptom management, sleep

It important a product with such efficacy and little side effects, be made available at a very affordable price, you dont want to discriminate against people who are on low budget from accessing its benefits.

Should be available from chemists like other over the counter medications are, like pain killers, sleep tablets etc.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I find it beneficial for good quality sleep, which is one of the main pillars of health. Poor quality sleep affects a large percentage of the population and leads to long term detrimental health issues. Research shows how CBD benefits general wellness and Australians would benefit from it's use. TGA would be advisable to tap into this research and make this harmless oil available as soon as possible.

High quality CBD at an affordable price is necessary so be accessible to all.

High quality CBD availability is paramount. The public need to know that the product is of a high quality with no inferior cheap quality imports. Might I provide an analogy and compare, practitioner quality high grade quality fish oil and a cheap supermarket low quality fish oil with fillers and the like.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a sufferer of many headaches over the years, a health practitioner mentioned one day that it was used in USA for headache relief. I was able to purchase a small dose from a reputable and legal supplier and upon the first use, my headache improved within 10 minutes. Within half hour it had virtually gone. I have used it many times when I have a headache and it performs every time. It was an incredible relief because I was sick of losing my life to headaches. It also helped with the stress that caused my headaches and helped me avoid getting more.

When you have a health issue, it is so draining on the family budget, If you have a bad week and need professional help, there are some weeks you just have to go without help and suffer. To have a little CBD in my cupboard, I treasure it because its so precious - its affordable help and I can help myself. I get angry when I have to suffer a headache because I cant afford expensive help, Something affordable would be a God-send.

Through a reputable supplier - several, so there's competition in price or perhaps through alternative health care providers.

I would use CBD in a safe way and read the label and warnings.

My best friend has a debilitating and painful disease, and I see her struggle to live a normal life. She tried cannabis for a couple of days, which enabled her to do normal activities without pain. A huge relief, and I cannot wait for her to be able to access more, as soon as possible. She's a pensioner, so cost is a factor. Quantities don't need to be doled out - she's an astute, intelligent human being and can decide for herself the dosage she needs. She's been managing her pain by herself for many years.
This issue is about Quality of Life.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

If it can reduce pain and anxiety levels in family and friends with various (and complex) medical conditions. Also of it can help with sleep that would be great. I know several people who are having trouble sleeping even on high doses of other medications which have some rather average side effects

Lower price point so that more people can access it.

Have it available in pharmacy and through companies such as Metagenics.

Only publish my submission on the TGA website with confidential information redacted. Please do not publish my health history

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD has been useful not only to me personally but to my dog. It helped alleviate his pain. We have used it for him for many years at low and safe doses and without negative side effect providing a significant improvement to his quality of life.

We pay high prices at the moment for our CBD. It would obviously make it more accessible to a great number of people the more competitive the price.

It is important that CBD be sold at safe and respectable outlets to remove the stigma from this very important medicine

I believe CBD should be made more accessible and at lower costs as a natural medicine. It has many proven medical benefits that mean it could be taken for health and well being in the way that many health foods and natural supplements are taken. This includes in conjunction with many conventional medical treatments. Australia is well behind the rest of the world. Certain parties and organisations point to "more research still required", when all that is being done is re-inventing the wheel.

Junk food is cheap and accessible to many. As a result this feeds the statistics for many health problems. This could be reversed by having a more accessible health and well being product.

Stalling the processes on already proven and documented research for a product which improves the health of those in need is irresponsible. People have the right to a higher quality of life without dependence on harmful pharmaceuticals. We don't want to go down the same track as the US and the opioid epidemic.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a nurse I have come across patients who have used CBD oil for epilepsy, schizophrenia, arthritic and cancer pain very successfully. I think it should be legalised and made easily available at a low cost so people can live productive, happy lives

Affordability is a huge issue for Australians. Pharmaceuticals are heavily subsidised yet many come with their own side effects. CBD oil without THC has very positive effects with very few known side effects

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Australians are finding ways to import this oil for therapeutic use. There is no point in keeping the current controls in place. If the "addictive" and "pschycotic" compounds are removed and I ti clinical trials have proven to be safe then Australia a should have access to cbd oil if they choose to use it to relieve or treat specific medical conditions, just as they would any other supplement, essential oil or pharmaceutical

It's a simple matter of supply and demand. if done well , it will create a new market in Australia for primary industry to invest in, manufacturing of the oil will create a competitive market and reduced regulation will improve access to the oil and therefore drive a competitive market

At least make it available in chemists as an over the counter supplemental medicine with some regulation as to assure consumers of it's authenticity and to prohibit fraudulent and misleading advertising and claims of fake cbd oil being the real thing

Only publish my submission on the TGA website with confidential information redacted. Name, phone number and email

I do not consent to the publication on the TGA website of my personal information.

Sorry I will not avoid reference to Cancer and the PAIN associated with Cancer as it helped my Stepfather immensely.

My stepdad was diagnosed with Stage 4 Lung cancer in September 2019 we got him onto CBD Oil 3ml per day from October and he had no pain and was on the oil for 30 days before he died on 22nd November in palliative care in Ballina Hospital.

The Doctors and Nurses were very surprised that he had NO pain and allowed my Mum to administer the oil at our visits.

This should be available to EVERYONE with any pain. So much better than pharmaceutical drugs to use something natural.

The price needs to be affordable for everyone to be able to access it.

For mild anxiety it can be a game changer, but prescription CBD at \$200 per bottle is prohibitively expensive for most.

CBD is a safe herbal constituent that should be sold OTC for anyone who wants it. It has a vastly safer profile than say, paracetamol, which is sold everywhere including petrol stations! CBD should be accessible to all.

I would use CBD in a safe way and read the label and warnings.

I have used CBD in a safe way without any pharmacist advise as I have not brought it through prescription. I sourced elsewhere and found a highly reputable company online. Being a nutritionist student, I understand how hugely beneficial this product is on our physiology. I have long term chronic pain from injuries that can't be healed or because I am too young (under 50), surgeons won't operate until I am at least 55-60. This gives me relief and means I can exercise again.

Often people associate high cost with high quality (and on products that can be true) but like all products there needs to be a variety of prices to make it accessible to all members of the public who choose to use it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

The proposal would impact me personally. I have lived with a chronic pain condition for 12 years. Unable to be managed with strong prescription medications, use of CBD would give me relief of the symptoms and enable a better sleep. Improved quality of life.

The price for CBD would need to be lower to allow those who need it to have access. Most people needing CBD as a medication are on a pension and higher cost medications are prohibitive. I have tried alternate health streams rather than mainstream medications such as naturopath (and many others) and have found the cost is not sustainable long term. Being a chronic condition that I have, it means it is not going to be a short term thing so I need something that is beneficial over the long term. Cost prohibitive means no access. No access means no relief. No relief means I'm not a productive member of society and I continue to suffer.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have never tried CBD but have read a lot about it. I would like access to see if it might help my nervous tension and insomnia. The insomnia in particular is quite debilitating and interferes a lot with my life. Mild sedatives don't work and I don't want to take strong sedatives. I think people should have access to this substance as it seems to be relatively safe. Govt agencies should facilitate access and research and consider whether they are being unnecessarily controlling.

I am on the age pension so i need a low cost product

When other countries make access to CBD oil easy and cheap it's hard to understand why Australia is taking such a hard line regulatory approach. Please reconsider this. Yes to research but NO to excessive red tape and cost impositions.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I believe in the right to choose. I believe all people should have access to a wide variety of medications, to achieve a quality of life, suitable to them, respecting their sovereignty and dignity to choose. Should I ever find myself, or any of my loved ones in need for pain relief, restful sleep ect, I want the ability to readily have access to natural medicine, without a stigma.

Lower prices for CBD that are not compromised in quality, is essential. Accessibility for all demographics is vital. The more people it can help, the greater the ability for our society to flourish, and not drain on other resources, as would be the case if people can not get well due to not being able to afford treatment

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have early stage polycystic kidney disease (PKD). At present, if I have joint or muscular pain issues, paracetamol has not been effective for me, whilst NSAIDs have been, but it is contraindicated for PKD due to it's effects on the kidneys. My only place to turn would be narcotics, which is a little too extreme, and not conducive to leading a productive place in society. I also know that as my PKD progresses, I may suffer from cyst pain. I am aware of fellow PKD support group members from the USA who use CBD effectively. I am hoping that this is accessible to me if I reach this stage of need.

If it was highly priced, I wouldn't be able to afford it

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the “Hybrid” option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have tried cbd oil as a way of managing my chronic pain and to assist with sleep and stress. I administered it of an evening before sleep and felt a positive affect. Better sleep and more comfort. I had no negative outcomes and general improvements where notable.

I believe that cbd is a beneficial natural medicine that should be available to the public at a very affordable price. The concept of big pharma charging for various medicines often lifesaving drugs at exorbitant prices is revolting and unacceptable from a civilised society.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I am 48 and mum of 3 teenagers, I home school my eldest boy, whom is ASD/OCD/Major Anxiety! He is doing main stream DE, from home and is in year 10! I have another son who has a muscular disease, which is manageable but again come with it's own issues and appointments! My daughter was absolutely tormented and verbally abused by her older brother and now has her own issues, plus they all have separation issues! Anyway over the years, I have gained anxiety, depression, Ulcerative Colitis, Chronic Fatigue and Fibromyalgia, I'm a red hot mess and the only thing that helps me function pain wise and just my being able to socialize and being comfortable, otherwise I would be in bed all day, even though that is not an option. I don't get why it's not a human right to have access to this product, if we know what is working for us!

We live off a low income, my husband is a motor mechanic and works hard for not much, so for it to be affordable I would need to be able to get it at a PBS price, depending on how much I need to use it, size of bottle ect

Definitely over the chemist counter!

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My family suffered from living in a house with mould. All seven of us got sick...my wife got REALLY sick. After visiting several specialists her health got worse and then we read about CBD. We obtained CBD outside medical pathways and informed our GP. My wife had several tests done and each time they indicated we were doing the right thing. After an extended period of time my wife is now well and we are confident that CBD was the turning point and pathway to functional health.

Being a low income family as a parenting choice our choices for health enhancing options is often limited by money. CBD is from a fast growing plant and is cheap to produce...pass on the benefits of this renewable natural resource to allow everyone access.

Chemists and Health Food shops.

I believe CBD oil should be widely accessible because I have used it and it helps with my arthritis pain and inflammation.

It should be made available at an affordable price for pensioners to be able to afford.

Since it has no hallucinogenic effects, there is no reason why it shouldn't be available at pharmacies and health food stores.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible personally it would give me an opportunity to manage pain and IBS potentially without the need for constant repeat scripts and be able to self manage with consultation with healthcare professionals

The price would determine if this is something that is within my means. The price of everything is important to Australians, having lower prices could also improve the lives and wellbeing of those with a lower socioeconomic status.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Dealing with nerve pain from burst discs in my neck, as well as arthritis pain in my knees, I have tried CBD oil which eased both immensely.

It also meant not having to deal with the awful side-effects of endone, Valium (unable to work, drive, sleep properly or function normally when using those medications) and anti-inflammation meds that cause stomach issues.

No drs visits, time off work, and available as needed. It's not something I would use on a daily basis, but just as needed.

The price is very important.

Lower prices means it would be available to anyone that needs it. Pain and suffering do not discriminate by economic status, and neither should access CBD oil.

Providing quality can be guaranteed, it should be made available as cost efficiently as possible.

Ability to purchase OTC via pharmacies, healthcare stores, and online. Limiting it to pharmacies 'in person' only may restrict access for people who do not live close to one.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I haven't used it, but have read quite a bit about it and think it may be an excellent thing to try. I have ongoing pain for years, from a couple of neck injuries, including muscle spasm and numbness etc. I also have a couple of the co-morbid issues that go along with chronic pain (sleep problems, low mood). During a flare-up the pain doesn't respond to over the counter pain medication, nor prescription medication either, like codeine. I'm nervous about another flare up, it's debilitating and I have to be able to work and parent effectively. I don't ask for pain killers because they don't help, and because I get the feeling doctors are anti pain medication. I feel helpless, and when the pain is bad a little hopeless. Please allow this to be easily available, affordable, with no stigma attached. If it works for me, or other people that's great! If it doesn't then it's no worse or better than other herbal supplements that make great claims but rarely deliver. Thank you, Megan

The price is very important because it will dictate how accessible it is to all income groups. However, quality is important too. There is no point paying bargain prices for a product that is so low quality it has no hope of providing any benefit.

THC levels must be insignificant, and there must be good standards for production of CBD products. I believe that, unless there is some real danger associated with consuming CBD, then like driving, taking supplements, drinking alcohol etc. that Australian's should be free to choose for themselves without undue interference.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

A loved one has a condition which may benefit from using CBD. They should be able to try CBD to see if it helps, without the huge stress and red tape that exists currently.

Lower prices means an even playing field for all sellers/suppliers. It also means it is readily available to ALL Australians.

Being able to access in shops, not just chemists is very beneficial. Not everyone can afford the stress and cost of using the current channels. It would be amazing to walk into a shop and buy a CBD balm (eg) to try on a sprain, sore leg etc

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have safely used CBD oil to help manage pain, anxiety and sleep under the advice of a practitioner. I've found it to work well and I like that I didn't notice any harmful side effects, like I do with other types of medication. If it was more readily available for an affordable price, it could benefit many in my opinion. My aunt who suffers from Crohn's disease also benefits from it tremendously.

Lower prices would make it more accessible for those who need it, like myself.

I feel like it should be available in the same way that other natural medicines are at the moment, as there's great benefits, very low risk and it's only medicinal, not psychoactive.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

One if our children was injured in a vehicle accident and would like to use CBD as a Pain stress and sleep medication. As it is not freely available at this stage this has been impossible. A relaxation of the current tight regulations concerning CBD use would benefit our family immensely.

Price always determines whether Australians can afford to use the product

Freely accessed in chemists

I would use CBD in a safe way and read the label and warnings.

I have arthritis in my right hand quite badly and it also helps me to sleep well, I know other people who use CBD oil also to great effect, I use CBD oil, without pharmacist advice

Yes, if it was cheaper than what it is now it would be available to everyone, regardless of financial situation.

If it was widely available for everyone, that everyone has easy access to the oil, that the Dr would write you a script, this is a medicine, and a great medicine at that, that elevates so many ailments

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have multiple chronic health conditions, one of which is psoriatic arthritis. I know for a fact that CBD can help this issue, but I cannot access, and cannot afford CBD in its current iteration, therefore I - and millions of others - continue to suffer while a safe and effective treatment, used all around the world for decades, is withheld or only sold to those who can afford it and can jump through all the hoops they currently have to to get it.

I cannot possibly afford it at its current price. Lowering the price to an affordable level would mean millions of people like me who spend an absolute fortune on medical conditions every month might actually have a chance of using it

It should be freely available, as it is in other countries, but the quality should be closely regulated to ensure its purity and that backyarders cannot add poisons to it. It should be affordable for even the poorest person, as sickness should not be a barrier to affording helpful medications - and affordable medications means fewer people are likely to want to grow their own and potentially poison themselves or others.

Do not publish my name or my submission on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Consumer

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My mother has had cancer and she wanted to get off sleeping pills after years of sleep issues. We wanted her only using natural solutions. We have sourced it for her and it has been a god send. Since having cancer she also suffered from anxiety. The cbd is greatly assisting with her anxiety and sleep

It should be available to all at a reasonable price. As I have mentioned it is derived from a plant and is a natural substitute for GP prescribed drugs. Why shouldn't everyone who needs it have access to it and more say over what they use to treat their conditions

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

[REDACTED]

Consumer

NSW, Australia

The choice to use CBD for sleep should be my own. I am sick of relaying in pharmaceutical drugs for my sleep issues. CBD oil is

greatly assisting my sleep.

Sick of sourcing this product and feeling like a criminal.

We need this to be readily available for all to use. It's derived from a plant. We should all have access.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Have used to treat minor tooth ache but I find it most beneficial to enable relaxation of pain during yoga and stretching routines pre and post athletic training and in aiding of recovery and pain management as well s tension release from lactic acid build up during intense exercise.

Lower would mean I could access enough safe cbd to support neurogenesis and pain management as an elite athlete

Best way would be over the counter from retail outlets to the public.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Yes, but is still dependant on the person. I have use it in a controlled minimal dose as an alternative to using diazepam. It worked for me

Price should be fair. I had bought some for \$200 for a 30ml vile

To be grown and processed here in Australia, opening up a whole new industry an employment for 1000's of trained people.

It should be available to purchase buy a qualified pharmacist, hospital or naturopath and sold to eligible people via from either of the 3

Only publish my submission on the TGA website with confidential information redacted. My feedback on the best way

I have used Cbd to help withdraw off opiate medication which I have been taking for 25 years. I find it helpful for overall good health. Another family member is trying it for his hand tremors with much success.

The low cost is crucial for everyone who needs to access it. Most people who really need access can't afford high costs as they are usually too sick to work!!

The cost of natural therapies is atrocious making it far from reach for those on benefits or with sick children who could benefit also.

Through health food shops, through herbalists or naturopaths or at the chemist.

I would use CBD in a safe way and read the label and warnings.

I have used therapeutic CBD oil for mild anxiety at night in order to have deep and restful sleep. I found it beneficial in providing this without any side effects. I have previously had Valium prescribed and found that made me too tired to function the next day.

Many people have difficulty sleeping and need cost effective solutions that provide them with good quality sleep. The health benefits of good sleep are well known and therefore it's important for us to be able to easily access good CBD at a reasonable price .

Just don't make people jump through too many hoops to get it. They can already buy it online from overseas.

I would use CBD in a safe way and read the label and warnings.

I believe CBD should be easily available as I work with many clients with anxiety. Many of my clients have independently sourced CBD and report back that they find it useful for relieving anxiety. They mention that it is calming. Given other options on the market such as Valium and Xanax are highly addictive, I would consider a plant option that is beneficial and non-addictive, a great, safe alternative.

I have noticed clients with a limited budget struggling to go through the process of getting CBD, as is currently and I think a safe, affordable option would benefit Australians, particularly with the rising levels of anxiety.

I believe it should be available at chemists at an affordable price.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I had severe post partum anxiety and still struggle to sleep after my second baby. My sister gave me CBD Oil when I was in the Uk last time and it changed my life. I was able to sleep and was much less anxious, being able to connect with my children better. When coming back to Australia I tried to find some and was really distraught not to have the same things available here to me. I previously tried medications but stopped these after terrible side effects. Having CBD available to me with seriously impact my quality of life for the better without me feeling like I'm doing something wrong for wanting to live a happier and more balanced life.

We live on a single income with two small children so obviously higher prices would mean that I wouldn't be able to afford the CBD.

I don't think there's going to be a mad rush for people to get their hands on it. There wasn't any in other countries and I doubt Australia is any different. People are interested in its therapeutic effects and want to feel better. Therefore cost shouldn't be prohibitive.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The proposed change will impact me because it will give me an opportunity to see if the health benefits already researched and published overseas over the last 50 years will be happen for me. Health benefits I am looking for from this product are: feeling of well-being, restful sleep, and reduced pain, Widely available and easily accessible would make life easier, because at the moment it is anything but that.

The price of CBD is important for Australians because all Australians ought to have access to therapeutic items at a price that is affordable to all, not just the middle or higher income earners.

The best way for the public to access CBD would be through pharmacies , so that if the individual needs some guidance or advice, it is easily accessible from the pharmacist in store.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I work as a Naturopath within a pharmacy environment. I work alongside pharmacists and we respect the knowledge we both have. I see many people who are in great pain from injuries or inflammation that often cannot be helped with other alternative medicines such as Curcumin, Glucosamine, Chondroitin, Ginger and Palmethanolamide. Their lives are impacted often to the point of not being able to work, missing days at work, or needing disability aides to walk, exercise or look after themselves in their homes.

Using a safe and low dosage, and mindful of any contraindications or side effects, CBD may have the potential to provide considerable pain relief for these people. It is time to consider allowing CBD use for these people to allow them to live a more productive life without the serious side effects of stronger pharmaceutical medicines.

The price of CBD is very important. Those most at need of pain relief are often incapacitated in some way; their ability to work is affected and so their income is reduced. CBD must not be priced above the abilities of those to pay.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have used CBD to relieve anxiety and improve my sleeping pattern. I have suffered no adverse affects from intermittent use. I believe that it should be generally available without prescription.

As a pensioner I would like to see CBD cost kept as low as possible. This is best achieved by opening up its distribution to non-specialist outlets other than pharmacies in much the same way that one can buy aspirin at a supermarket.

See above.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have moderate/severe rheumatoid arthritis. I already use prescribed CBD, but am finding it very expensive.

I use the lowest possible dose due to cost. Lower price means I could use More (up to my prescribed allowance).

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had non hodgkins Lymphoma for over 6 yrs & associated pain from Neuropathy , a fractured neck & pinched spinal cord & severe arthritis from a long sporting life & has affected my sleeping & I am in constant pain .

My 30 yr.old daughter has diagnosed Fibromyalgia & many other serious illnesses, including migraines , body aches & pains , PTSD.

The current extortionate cost is prohibitive for both of us .

She has been unable to work for 5 yrs & only one subject to complete of 2 degrees she has almost completed .

Cannabidoil is the only compound that really relieves our pain & other illnesses.

I am a pensioner in my 70's & the disgraceful behaviour of Pharmaceutical companies , because they cant patent it & alignment with the outlawed full Marijuana plant & also by conservative politicians with wilful lies about difference is an affront to our intelligence .

It is currently priceprohibitive for us to purchase cannabidoil.

Increased production ,& availability ,alone will reduce the cost & also the bureaucracy & restrictive laws will make it available to ordinary Australians . Pharmacies & retail outlets like health food stores, plus approved online legal suppliers , will allow a prices drop ,with resultant increase in competition.

Only publish my submission on the TGA website with confidential information redacted. Use your common sense

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would use CBD in a safe way and read the label and warnings.

I believe, given it has already been proven to be effective in treating many ailments, that it should be available to all Australians if they choose to use it.

CBD should be available without prescription at low cost as it is in many other countries already. Australians health and wellbeing should be placed well ahead of profit or it may end up unaffordable to the people who need it most.

CBD must be made available to all Australians over the counter without the requirements of providing need or the need of a prescription

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I believe CBD should be available widely to help with sleep issues. I have used CBD oil in the UK and found it very helpful with chronic insomnia and tiredness related headaches. I used it safely without a pharmacist's advice. It is freely available in the UK- it was high quality and I did not experience any apparent side effects.

An expensive CBD would exclude low income earners from purchasing it. People with chronic pain often have difficulty continuing employment and so could find purchasing CBD difficult if expensive.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

My partner suffers from arthritis and joint pain and tested CBD oil for a week on a trip to Denmark with wonderful results. I think having access to CBD oil would reduce his pain and contribute to a higher quality of life.

I prefer that the oil is of a high and comparable standard than cheap, so that it's hard to mix your dose. i.e. the same dose should give the same effects regardless of the brand.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, general health and wellbeing.

I've used CBD made from hemp to treat sleeplessness and have found it to be fantastic. Much better than pills or supplements I have tried. It helped with ongoing anxiety and stress tremendously.

I think it's absolutely essential for CBD to remain affordable for all Australians, particularly those in our community who are disadvantaged. Keeping the prices low will ensure equal access for all who need its therapeutic benefits.

I think it best for it be sold over the counter alongside basic painkillers and sleeping aids.

I would use CBD in a safe way and read the label and warnings.

I have researched CBD extensively. The current solution results in drug addiction and all that goes with it. If it's not low cost the majority of people will be forced to select the cheaper option. Make it the same price as paracetamol and let the Australian public choose the best option.

Whoever this reaches, you have a responsibility to do what is best for the Australian people. Do what is best and right. Help your fellow Australians, please.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

CBD oil at VERY low level has helped my pet. Seeing the difference in her quality of life toward the end of life informs my view that there is treatment value for pain and anxiety.

I believe in access to health for the greater good. Maximum access with consideration of safety and personal autonomy is important.

The use of a broad range of health practitioner would provide equity of access. I do not believe it should be restricted to pharmacists.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I know 2 people that have used CBD. One for Pain & Nausea, the other for Chronic Joint Pain. Both have reported reduced pain, stress and better sleep and significantly reduced Nausea with no side effects.

Lower prices of CBD are required. The price range puts it out of reach for most people, especially for long term use.

My mother suffers from MS and has tried CBD but sourcing it is hard in Australia but it did help her immensely, so having it readily available would be great.

I find it amazing that CBD and cannabis are illegal here, when states in the USA are thriving just from sale of CBD Products and Cannabis legalization.

Should be on par with the USA's prices, but I mean lower the better everyone should be able to readily afford these

Date: Tuesday, 19 May 2020 7:04:18 PM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Used without pharmacist's advise in Australia and with excellent results.

The CBD oil helps senior citizens so lower costs would favour them.

Ensure that it is standardised but make it freely available.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I would use CBD in a safe way and read the label and warnings.

I have mild fibromyalgia and I understand CBD to be really helpful for this type of pain.

I can't afford to pay much for CBD, and especially now after Covid. We have lost a huge amount of our income, which is causing more stress, which is causing worse symptoms of the fibromyalgia. Low cost is necessary to be more accessible.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

This proposed change will make it much easier and cheaper for me to use CBD oil to relieve symptoms of mild anxiety and to help with restful sleep. I have tried various CBD oils, always within safe recommended doses, in countries where it is available to buy from stores. I have found it to be effective.

I also find Australia to be lagging behind other countries in this area. Research is promising and the fact it is non-psychoactive means it should be available to Australians.

In an already financially uncertain time, it would be a shame if the release constraints of CBD meant it was unaffordable.

This should be a product we can openly talk about and access. It has clear upside and very important potential benefits. Australians should join the rest of the world in having a choice on whether they use CBD oil.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I have been suffering from torn hip labrum for over 2 years which has prevented me to do any meaningful exercises including walking. . I went to the UK for a visit and was surprised to see CBD sold in a health food store. I bought it and tried it. Although the pain didn't go away completely the pain level decreased which helped me to be able to do some walking. I walked round with slow steps and with much sadness I threw the bottle in the bin at Sydney airport with so much hesitation.

I think the price should not be low. But even if the price is on the high side I will pay to try it to see how effective it is. If not too effective I will think about if it's worth buying the product. If effective I will regulate how often I will use it.

I believe we have over reached in legislation restricting cannabis and non pharmaceutical medicines.

Laws are interfering with civil liberties and corporate monopoly and centralized control are the drivers..

Cannabis abuse of itself should be addressed as a health rather than a legal issue to be penalised.. Self medication, even to excess, should be met with research and availability of help with the underlying problems., NOT restricting access. Prohibit advertising by all means.

I have no present need but if I did and price was excessive I could obtain informally.

Historically, we did not have problems with cannabis or other folk medicines and drugs. Laws were adopted after corporate lobbying and misinformation.

Remove all criminal laws as was the case in the past. After a period, need or otherwise of nuanced intervention will then be apparent.

Health thinking, not not criminal.

We need to stop relying of big pharma toxic drugs. Big money brings big corruption, doctor brainwashing at medical school as well.

It is good for health and a whole host of cures.

Big money from big pharma pushing unnecessary drugs making us all sick in need of more drugs. We have medicine for wealth not health. Numerous natural medicines that have been proven globally for a long time ignored as not worth much money.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep, general health and wellbeing.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

I am on CBD oil now 450mg bottle 8 drops twice a day. I also have THC 20mg , I have no more than 5ml a day. Because of Covid 19 its harder to get because it comes from overseas. If it was done in Aus it would be better and hopefully cheaper. I am on DSP pension and work at Bedford industries part time. At the moment I am not allowed to work because of being High risk. It is really hard finding the money for my oils and having to order 2 weeks before you run out.

It is important that its a lot cheaper, people who need it can't afford to pay the high price. I have to save so much to pay for my oils out of my pension, I shouldn't but i try to make it last longer.

Through their local Doctor is probably best they can keep an eye on you and with a script from them you should be able to go to your chemist

CBD is not harmful and users can not overdose on it. People should be able to buy it from any store as it is a health product and does not alter the mind in any way at all.

CBD does not cost alot to produce therefore we should not be lining the pockets of big pharma just because they have the monopoly on the product.

A family member has had to use CBD product to assist in a health problem. As it wasn't prescribed by a pharmacist or doctor, they experienced a lot of paranoia that they were 'doing something wrong', as they had to procure the product via unconventional means. Due to the unconventional procurement, the product was also quite expensive. However, the product worked perfectly and as expected. If it were widely available, closely monitored, and at a reasonable cost, many more people could possibly treat their ailments.

Like any medication, the cheaper the cost, the more likely people are going to use it. Some Australians don't have much money in their budget for medication, and unless it is vital, they may forgo it to put the money towards more pressing bills/items.

I would use CBD in a safe way and read the label and warnings.

I have clinical depression and anxiety. I have been taking serequel for more than 3 years so I can sleep more than 1-2 hours a night. I also have chronic fatigue and fibromyalgia which symptoms are heightened and exacerbated by stress of high physical activity (my job requires me to be physical). I take a multitude of prescribed medications and supplements to function properly and even then I have relapses. Having access to CBD would allow me to drop some of these medications and significantly improve my quality of life. Not to mention, the financial strain these medications and supplements cost.

After years of pain medications, a higher dose seems like a more reasonable choice. I have developed a greater tolerance for medications as I suspect a lot of others who want CBD for medical conditions

As a shift worker I am very aware of the importance of sleep and relaxation but often the demands of the modern world mean I find myself stressed/angry/anxious. I occasionally used diazepam as prescribed to get the balance back but would much rather use mild doses of cbd oil. I've used marijuana but don't like the thc component effect or hangover.

While it should be easily available to all the over the over the counter price should discourage improper use. As an ex smoker I understand how easy it can be to unintentionally overuse a product. I would be willing to pay for a specific product that I can know it's affects on me.

It should be dispensed in a similar manner to other medication that people have overused or abused. A could explanation from your pharmacist and hopefully a good connection with you, your pharmacist and your GP.

I would use CBD in a safe way and read the label and warnings.

Many people I know use CBD daily for personal health issues and pain ..Which has worked greatly for them. This product which is being used all over the world should be freely available for personal use .. It is natural and has been used for thousands of years for well being ..

A lot of Cannabis makes a little CBD oil.. But if good quality CBD is available at a lower price .. it would help the unfortunate that can't afford the high prices .. especially those who have disabilities ..

I believe the Naturopaths' are one good way ..as they can help in other ways via good nutrition and natural health advise.. seeing that these people have health issues.. usually from poor food choices. Private shops or Health shops .. Not Chemists or Medical dispensaries' as they are connected to Big Pharmaceuticals ..

I would use CBD in a safe way and read the label and warnings.

Yes we have used it, including our pet who has autoimmune disease. It helped significantly. It helped me for a while with inflammation associated with a serious acute illness.

Quality is important to me. I'd like options regarding price vs quality/strength.

Do not publish my name or my submission on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I do have friends who used therapeutic CBD safely without pharmacist's advice. It's not like a drug that you can get lost in it or get addicted to, since what we're talking is the therapeutic version. It's a valuable pain killer for many. Making it restricted only push people who are in need to try to obtain it from other sources which actually may not be safe. It is vital to supply good quality, therapeutic and safe version of CBD available to those people who are in need.

There are many who are already paying lot for other form of treatments, having CBD in lower price would certainly help them to continue with their treatments while being able to access CBD which is complimentary.

Only publish my submission on the TGA website with confidential information redacted. Name, surname & email.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I know of people and animals that have used CBD oil for many different ailments. So long as it does not get people "high", I can not understand that why it has not been available before. It is a natural remedy compared to manufactured medications with less side effects.

Lower prices will allow more people access to CBD. People on low incomes miss out on many things, It should be available for everyone

If it is available from chemists, then the government needs to monitor pricing as the prices will skyrocket otherwise. Possibly give licences similar to liquor licences??

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety, help with restful sleep, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The availability of CBD would directly impact my quality of life because I would have an alternative option for multiple medications that help me to manage my chronic health condition, as a relatively young person, 38. I have ongoing pain in muscles and joints and nerve pain. The side effects to the medications for nerve pain are terrible and if you are not slowly weaned off of them the withdrawal is horrendous. Ibuprofen for pain is bad for the stomach, and a healthy gut biome is your only real chance at managing chronic illness. Opioid based pain killers are NOT suitable for long lasting chronic pain. I have personal accounts from many friends and family that can access CBD safely and legally in their counties that rave about the benefits they are having to symptoms of inflammatory pain, anxiety and good quality sleep. They are not experiencing the many side effects that come with prescription drugs. They can sleep better, which in turn helps other symptoms. There have been no negative consequences reported.

I am currently unable to work due to my chronic illness. A large number of the population who could actually benefit and improve their quality of life will not be able to afford it. Medically approved CBD in Australia currently costs approx \$1200/year and it is important to maintain daily dosing to get the benefit. That is expensive for someone not working.

Through holistic practitioners, online/in shop businesses

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

it should not be highly priced otherwise people will continue smoking marijuana as this is the bench mark and on the black market a cone a day would cost no more than 50 cents . of course it is used more so I feel a reasonable dose of CBD should be no more than a \$1 per day

any pharmacy .

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would use it for anxiety, pain relief, stress relief and all the other known benefits that this product has already been researched for around the world with thousands of research papers already available.

It has to be affordable by allowing more companies to sell CBD products with very low THC. Just look around the world what other countries are doing and how they have made it affordable. Why is Australian government policy lagging behind the rest of the world on this?

Make it available in chemists without a prescription, as CBD oil is non psychoactive.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

CBD oil has helped me to sleep better and it has reduced the inflammatory pain i experience as a result of an injury. Safe, effective, no side effects. I would like it to be produced by ine of Australia's existing high quality herbal medicine manufacturers and not by big Pharma, who will sell us short on cost and quality without a doubt

The price should reflect the cost of producing a quality, clean, pure product. Use an existing Australian herbal medicine manufacturer! No Chinese imports/deals involving big Pharma. I wont buy that type of product.

Australian grown, Australian produced, not unvolving large pharmaceutical companies. Support high integrity small and medium Australian businesses!

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

CBD oil is the only Medicine that has helped me with my chronic pain, and sleep disorder. It has been helpful also for my anxious child

Price is important, however people are willing to pay for something that works, and it lasts quite a while as it is low dose related. Value for money.

I believe it would best serve our economy and individualised healthcare system if the public accessed CBD oil through allied health professionals or medical doctors. AHPRA registered practitioners only.

I would use CBD in a safe way and read the label and warnings.

My neighbour is using it for his MS and general pain. My friend would have liked to obtain some for mood but was worried it would clash with ethical code in profession.

Price for CBD is important for Australians as poorer Australians are already negatively impacted by their lower income and suffer from more chronic disease.

Best way to access CBD safely is through a registered health care professional such as nutritionist or naturopath or chiropractor (all bachelor degrees)

I would use CBD in a safe way and read the label and warnings.

My father has serious health issues from which he will not recover and is in constant pain.. He currently takes Plexia (Tapentadol) which helps with the pain but causes a number of side effects for him. We have both done a lot of research into CBD and feel this product would help him immensely with both pain and his quality of sleep. Currently Plexia causes him sleepless nights and dreadful nightmares which result in him waking very distressed most mornings. We are in the process of applying, through my father's GP, for permission to use CBD. The doctor has advised of the high cost of CBD and with my father being an aged pensioner we are not sure how long he's going to be able to afford to pay for the product. Neither my father nor myself have ever used CBD but we are hearing many positive stories from the health professionals we see with Dad's condition and both feel very positive towards the product.

Currently the price of CBD is quite high and many people who would benefit from the product are unable to afford it. Reducing the price would help make it readily available to those Australians who would benefit from its use and give them a better quality of life.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a person with major health issues having safe affordable access to both cbd and THC oils would hopefully allow me to exit the pharmaceutical line of medications , hopefully allowing a much better quality of life without the terrible side effects i now face

As a person on disability money is very tight

Freedom of choice is a must, pharmaceuticals have created many dangerous side effects for myself

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I would use CBD in a safe way and read the label and warnings.

Personally the proposed change would not impact me at this point in time, however, I would like to know it is available to me if the need arises.

I think there should be two strengths available, as some situations would warrant higher doses and some only low doses. The price would be crucial so that the 'average' Australian could afford it and so it is not only available to the wealthy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

As a medical herbalist with over 15 years prescribing herbal remedies successfully for a wide range of ailments I think I am better placed to advise patients on the use of natural supplements such as CBD than a pharmacist.

Unfortunately as a medical herbalist I am unable to prescribe CBD to patients. However I do know of many patients and other people using CBD. One of the limiting factors for use is the prohibitive cost of good quality supplements.

I believe the best way for the TGA to allow access to CBD would be through health food stores, speciality CBD product stores and fully qualified naturopaths and herbalists who work face to face with patients and understand their history as opposed to a pharmacist who has no idea or time for a full consultation.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Dr recommends me to try ,glaucoma might have less drops with side effects,polymyalgia,osteoarthritis,bad sleep,ptsd,anxiety. If this helps me to be able to move freely,do my voluntary work,no pills that bind me up,,help me relax,any thing ti make life easier.For firstvtime cost is \$250 then \$275 for script,on aged pension

The price now for me is not able to be kept up. Cbd is a plant. People grow and use it all the time. A reasonable price would stop growers selling to anyone,regulated price ,affordable,taxed,or through Medicare

Never knew I could access this,my Doctor suggests I use it.A doctor or chemist should be a safe way for all to access it,pure not home grown.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have been taking CBD oil for the past couple of months for pain related to past spinal surgeries, osteoarthritis, spinal canal stenosis and fibromyalgia. My symptoms were severely worsened lately due to having to take aromatase inhibitors. My pain levels were at a point my usual doses of tramadol and gabapentin were not sufficient by themselves and oxycodone was the only drug that would give me enough relief to be able to perform basic daily tasks.

I was prescribed CBD oil 100mg/ml and found that it reduced my pain considerably in no time. I no longer need to take oxycodone and i only need a minimal dose of tramadol. (50mg daily). Without CBD oil i would struggle to continue my aromatase inhibitors due to the increase in pain they cause. I believe if not taking aromatase inhibitors i could cease taking tramadol all together. My biggest issue currently is the cost involved as i am on a disability pension and the only way i am able to continue taking CBD oil is with financial assistance from family. I feel approval of CBD oil would help reduce the number of pharmaceutical pain killers people need to take as it is by far one of the most effective pain killers i have been prescribed in the past 10-12 years. I experience no side effects while using the oil compared to other drugs.

I currently pay \$233 for a 25ml bottle of CBD oil from Bendigo Hospital. This lasts me 2 weeks (1ml morning & night). For someone with a disability or unemployed the price makes it out of reach. I have only been able to afford this through financial help from family but i am not sure if they are able to afford to keep paying this for me. I believe even those working full time would consider the cost of the oil too expensive.

CBD oil in my opinion will have a huge impact on the necessity of taking narcotic pain relief. I know many people who would prefer to be taking CBD oil instead of their usually prescribed pain killers. A lot of people i know have questioned me and shown interest in trying CBD oil, rather than usual narcotic pain killers, but are unable to under current circumstances, and/or could not afford it at the current price anyway. I believe CBD oil should be available to the

public through pharmacies across Australia for treatment of not just pain but many other conditions that it has been shown to help.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have seen for myself how cannabis product can relieve mild pain, anxiety, reduce nausea in chemotherapy and radiation patients and ease symptoms associated with IBS.

I firmly believe there should be low dose product available to the general public, with higher dosing dispensed by pharmacy, and highest doses and for children by prescription only. I have also seen benefits in other conditions, concurrent with prescribed medications appropriate to those conditions. I have a friend who uses the oil topically for arthritis with good effect

Higher pricing limits availability for lower socio-economic groups. It needs to be available to everyone I do not

Only publish my submission on the TGA website with confidential information redacted. Do not publish my name and email address

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

The use of a product containing CBD would enable myself and others to try a more natural medicine and hopefully decrease the use of potentially addictive and harmful use of many pHARMaceutical product that generally become less effective over time and generally are needed in higher and higher doses which becomes a serious health issue

A cheaper price is going to enable these types of medicines to be more affordable for more of the public who are in the low income/lower socioeconomic category. If it is more affordable and effective it is going to improve the quality of life and also the general health of the public and lower the cost to the government when they have to subsidise medicines currently available on the PBS scheme

Make it available to the public thru authorised and qualified people

I would use CBD in a safe way and read the label and warnings.

i have used this as a topical skin treatment...it worked where steroid creams didnt.. my wife (chronic copd) has used this also as a sleeping aid and also reduced her pain killer intake....also she has severe shaking and body tremors to the point she cant hold a spoon to feed herself,cbd stops the tremors

a natural product with no deaths associated via overdose.....it is impossible to hurt yourself while using this...this needs to be legalised immediately....and keep "big pharma" away from it...look at the disgusting mess and the jacked up prices for normal medications

a natural product...with zero side effects....totally impossible to overdose....this needs to be sold over the counter from any health/cbd shop....imagine the savings to our p.b.s system?...imported cbd are rubbish,its grown hydroponically...australian cbd is sungrown in most cases,developing the full broad spectrum of cbd,s....you would be well advised to consult the "nimbin hemp embassy" for the full,unbiased and truthful facts....along with the 1000,s of case studies they have done themselves

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

The wide use of CBD overseas makes the idea of bureaucratic red tape-heavy restrictions on CBD oil in Australia an embarrassment. Especially considering people will order it from OS if they can't get it here, and especially as THC cannabis has been legalised for commercial use in the ACT and will follow suit in other states and territories.

The idea that the TGA is so caught up in safety issues around CBD oil when alcohol is freely available for purchase makes one more mockery of the whole situation.

I have MECFS and newly diagnosed hypothyroidism and diabetes. I've been severely depressed and anxious for the past five years and if it wasn't for CBD oil I wouldn't have been able to get my anxiety under control enough to be able to muster up the courage to find a new GP and get my new diagnoses and treatments.

CBD oil doesn't work for everyone, and it's not a one-size-fits-all substance. People need to have the confidence to be able to try and adjust dosage etc and stick with it over weeks to get the right dose, and even then it's complicated. A fearmongering and excessive red tape exercise from the government and its expensive and overwrought attempt to financialise CBD oil means the people like me who need it most have to buy it illegally. It is a nonsense and it needs to be stopped now. People need to be given the responsibility to choose for themselves.

Sue Stevenson
#freeAssange #KeeptheJobSeekerRate

The govt scheme has created, as usual, a two tier system where the ppl who can find a GP to prescribe and pay the exorbitant prices are served. As usual, the people with the most pressing health concerns who need it most are left having to buy it illegally. Lower prices would make it far more accessible for me.

This is one area where the govt should leave it to the market. How about nationalising manufacturing and ease TGA restrictions on CBD oil instead.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

I have been consulting with my doctors for many years on how to balance my wellbeing & improve my quality of life. I go to a great deal of effort to research any supplements I take to ensure their quality & company policy is socially responsible. It’s becoming more & more difficult to access health products that are “natural” yet effective & several of my loved ones report great success through the use of prescription CBD. I would really like to have access to this product but it’s simply too expensive for me. I think appropriate warnings, dosages, usage guidelines & general education is very important to assist people with understanding any new health product but this is what pharmacists & health professionals are there for.

Higher prices of CBD simply make it unavailable to a large portion of the population and as medical studies indicate it to be such a beneficial product for health & wellbeing, lowering the cost is crucial to make it accessible. It’s the key barrier for me.

I think ensuring the product is available through providers who have the appropriate knowledge & experience to provide reliable & current education & guidance to consumers of CBD is key to making sure the product is not misused & used with maximum efficacy.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

i have people sourcing CBD on the internet to help them with pain and anxiety , and these often are not TGA approved and have no idea just how good the product is- i think that the TGA should allow people to buy a CBD oil without a pharmacist - we have wonderful health products available in retail that TGA has approved - this should be added to that list

for a large part of the population with pain and anxiety are elderly and/or low socio-economic areas , and they should be able to access this wonderful natural medicine

it should be accessible through health stores , pharmacy and health professionals , where there will be someone to give a little advice if necessary

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because my mum is in pain has irritable bowel and she we think it would be very helpful for her and reduce the amount of other pain relief she needs to take which have side effects which she does not like. I think people should be able to choose their medical care and medication weather natural or pharmaceutical and be empowered to choose what is right for them.

Young Living Essential Oils have CBD oil in America and I would like to be able to purchase their CBD oil here in Australia.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used cbd safely in the USA and use it every time visit the USA. It helps me with stress mild anxiety and sleep. I would like to be able to buy it for the same purpose in Australia.

Lower prices are important to ensure CBD can be accessible for all.

While in the USA cbd is easily available over the counter in retail health food and speciality outlets. I believe it should be the same in Australia.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have chronic pain and a number of minor issues that I think CBD would be useful for, yet there is no way to access it safely here. We need access to this and to be allowed as adults to access CBD to try it if we think it may be helpful for our personal circumstances. Other countries have access to this, why don't we? I believe being able to access CBD for adults would be safe and may possibly be helpful for people like myself who have pain and minor health issues.

there needs to be lower prices that make it accessible for people of all socioeconomic backgrounds. having a high price point will mean its only an option for the wealthy to use and that is inequity.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have friends who have chronic pain. I have had insomnia since 4 years old and have PTSD. I believe it may help and would be willing to try it. My mother has cancer and it would help her but she cant afford it. I have friends who have children with epilepsy that it would help too, studies have shown it helps. My son has parkinsons and it would also help him. None of us can afford it currently.

Please read previous comment.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have had many clients with terminal cancer use CBD to improve their quality of life by reducing pain, improving sleep and ameliorating anxiety symptoms. In all cases their use of opioid based medicines was reduced along with the undesirable side effects of taking them.

Cost of medications for pain particularly but where used to improve quality of life should be affordable and available for all Australians and not the right of only those who can afford it.

Cannabis is part of western naturopathic medicine pharmacopeia and should be able to be prescribed by qualified Naturopaths and herbalists. Too many of our traditional herbs have been scheduled due to, in many cases, theoretical effects.

Only publish my submission on the TGA website with confidential information redacted.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I think CBD must be ‘proven’ to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

Cbd oil for endo pain. This stuff was a life saver.

If it works I’ll pay whatever it cost

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used it, I bought it from the U.S.A. I would like something that I can have confidence in that is locally sourced, produced and handled. It helped with my mild anxiety, and restful sleep. I feel when I have my anxiety under control I can do everything else better. I do not take any OTC or prescription drugs, and am generally anti large pharma medicines. I order natural, holistic, no adverse side affects medicines or options. My husbandghusband me into it after he tried it and had successful results with managing long term headaches.

I go for quality, so the price point isn't a big deal, if I can see the value in the product. If you want low socio economic people to try this, then you need an affordable price point for them.

Don't over complicate it/red tape/ micro manage or link it to identity requirements. It's no one's business, including GPs. I don't need a GP to buy vitamins and OTC medications so don't make this one a 'psydeoephadrine' drivers licence one either.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have endometriosis and a lot of the time paracetamol and ibuprofen have little affect. Opioids have horrible side affects and I don't want to use them. I am currently investigating getting tga approval through my doctor for cbd oil but am finding out it its prohibitively expensive to buy. Having it available allows competition which would mean more people could see if it helped their pain.

Affordability is important to Australians because our healthcare system is built so that people have access to treatments no matter what their wage is. Some studies have also indicated that cbd oil reduces the need for opioid medication, and with lower prices people can have an option with less harmful side affects.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

My parents have used cbd safely to assist them both with pain and anxiety. I have seen first hand the improvement in their quality of life after pharmacy drugs have failed to improve their conditions. If it was readily available I would want to try to use cbd safely for anxiety

The price is very important to be kept as low as possible to make it widely available for those who need it. I believe everyone has the right to access safe and effective medicine. The need to use cbd over a period of time means a lower price would allow me to access and use this option.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I would use CBD in a safe way and read the label and warnings.

Over 12 years of clinical work I have seen hundreds of people suffer chronic pain conditions and medicated with pharmaceutical products that have a long list of side effects and often little effect in the reduction of pain and improved quality of life. CBD oil has research which supports its use for pain relief with minimal side effects. This is why I would like to see CBD oil more available to the public in a safe way.

Affordable medicine, lower affordable CBD makes it available to those who have been out of work due to chronic pain and can therefore afford to take it long term.

We need other options for chronic pain, reduced risks of depression resulting from chronic pain and reduced cases of addiction to pain medication like phentanol .

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

If my 10/10 pain was stopped, I could work, sleep, and not feel depressed all of the time.

Lower prices of CBD are essential. People with ASD and Aboriginal Australians are statistically struggling financially and dying a lot sooner from health issues (36 is the life expectancy of an Australian with ASD). Lower the prices, stop discrimination in access to medicine and close the health gap.

There should be no barriers to accessing CBD due to the existing, prevalent discrimination in the medical system, proof of which is the death rate of Australians with ASD at 36 years of age. Otherwise, end all discrimination within Australia's medical system, so not only the privileged few are allowed access.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have used it externally for fascia knots and pain and found it helps for that. internally it promotes a good sleep and pain relief.

i would not consult a pharmacist because of lack of their training and knowledge about it.

I'm used to observe and that is a much better gauge for me than someone telling me who has no knowledge.

i have also used it in my dog for allergic scratching. and it has helped him hugely.

if anyone cares to do the research our bodies have receptors for a reason. and nature provided it, so logically our bodies would respond positive to cbd.

Subject: Proposed Amendments to the Poisons Standard (Medicines/Chemicals) [SEC=No Protective Marking]
Date: Monday, 18 May 2020 7:09:07 AM

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for stress, mild anxiety, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I wont be able to afford it for my elderly parents if the price is too high.

Pver the counter purchase using photo ID to mointor.

Only publish my submission on the TGA website with confidential information redacted. Do not publish my Name & email

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would like to be able to try it for mild pain and stress relief without feeling like I'm doing something illegal or heavily restricted.

I think a low price is crucial for a wide range of Australians to be able to access CBD.

I know so many Australians that have minor health conditions that they believe will benefit from taking CBD but don't know how or where to obtain it. Also people with chronic health conditions that would like to be able to have a free and honest conversation with their doctor about whether it would be suitable to add CBD to their existing medicines.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have tried CBD oil in the past to assist me with a mild health problem. The problem resolved fast. I find CBD oil effective and helpful for minor ailments

I believe CBD should be available at a low cost for all Australians. High prices would limit accessibility

Best way for Australians to access CBD is on the free market directly from the producers. Alternatively from pharmacy shelved

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I would use CBD in a safe way and read the label and warnings.

I believe CBD to be a relatively innocuous alternative to opioid pain medication, moreover, an easy aid for anxiety and insomnia, both of which my girlfriend suffers from.

A higher price would effect me in that it would cost me more money... silly question. I think there is some rationale for taxation of CBD but not so much so that it becomes purposefully expensive — i.e. like tobacco. CBD oil ought to be cheap, similar in price say to essential oils.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

My father has a few chronic pains and injuries that cause discomfort and some difficulty in his day to day life. The only thing that has helped with the pains while also leaving him properly functional (no drowsiness etc) was CBD oil that was lent from a friend.

Every body experiences pain and injuries, poor/middle/upper. Income shouldn't be detrimental to accessibility.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

I went through the process of getting TGA approval and then accessing CBD through a chemist. It was prohibitively expensive. I have used it for several years with excellent results. It allows me to manage my chronic health issues with a minimum of drugs that have some very unpleasant/dangerous side effects. I am able to be an active participant in life. Also still able to volunteer several days a week. I find the CBD oil is easy to use and has no unwanted side effects.

If i was to continue to access through a chemist I would be unable to afford to use it. The cost is too high. I am now retired and on a part pension so cost is very much an issue.

I am sure we should be able to grow and make CBD here in Australia without recourse to overseas markets. CBD does not need to so expensive nor does it need to be restricted as it does not have any psychoactive properties or dangerous side effects.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD yet, however it would only be under the care of a health practitioner.

It should be at a lower prices so the average person can afford it and so the government doesn't have to subsidise it.

I think it should be through a health care practitioner ie. Naturopath

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Having used CBD for nearly a year now my symptoms have eased greatly, plus I have been able to decrease my prescription medicine. I have also been allowed to drive again with the full permission of Victoria roads. I would like other people to be able to have this sort of help at very reduced costs.

I'm now paying very high prices for my CBD which only lasts me a month, reduced prices would be great plus those on lower wages could also benefit. There are lots of diseases that would greatly benefit from using this type of medicine at reduced prices.

Perhaps only being able to access CBD from the pharmacist would be an idea.

Only publish my submission on the TGA website with confidential information redacted. Surname and full address

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

We have used CBD safely, we had advice from a healing professional , but non pharmacist .

CBD was very effective for pain relief, much more effective than the mainstream drugs available, and it also helped with sleeping.

I think CBD should be provided at the lowest price possible, reflective of its production, marketing and regulatory costs; hopefully regulatory costs don't make it too expensive.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

Proposed changes would enable access to a quality product at a reasonable price

It is important to have lower priced CBD to enable affordable access to the product by all Australians.

Best way for public to have CBD access is being able to purchase through shops ie: Naturesworks, health & natural remedy stores, pharmacies, direct from producers.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

Have used it safely with no issues.

Lower prices or freelist is important to all low income earners and pensioners.

If this questionnaire is designed to see if people are willing to pay a high price for relief then I object.

The choices given for using medicinal CBD are poor and ruling out cancer etc is not helpful.

It should be available on chemist, health food shop and supermarket shelves the same as other pain relief medications.

Only publish my submission on the TGA website with confidential information redacted.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've been advised that CBD helps a lot with mild headaches and back pains. I have these pain on a regular basis so would love to see what the difference CBD would make for my ailment.

It should be readily available like any other off the shelf drugs. It should be priced appropriately.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I would use CBD in a safe way and read the label and warnings.

Higher prices would restrict my access to this product. Lower prices would improve my quality of life

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the TGA proposal – pharmacist-only, up to 60mg/day, adults only & must be proven in large studies to work at low dose before permitted for sale.

If available, I would like myself or my loved ones to try CBD for mild pain, help with restful sleep.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I suffer from osteoarthritis and I have heard that CBD can be very helpful with the pain from this condition.

I am a disabled pensioner and I wouldn't be able to afford to buy CBD if it was only available at a higher price.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I know families with young children who fit regularly and have prescriptions for cannabidiol but it comes from overseas and costs them \$1500 a month. Its killing them financially, the alternative being a brain damaged child. This product should be available to them here at a reasonable cost preferably the PBS.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I would use CBD in a safe way and read the label and warnings.

I would like to use it in times of stress, for a natural sleep aid, also for general health of the digestive system, some mild pain relieve

As far as I understand it will be beneficial for the endocannabinoid system, which speaks for itself ?

Lower prices would make it available for people on lower income, which is the larger group of potential consumers / customers

I believe this should be available in the same way and for a similar price as paracetamol or aspirin

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS).

I think CBD must be 'proven' to work at a very low dose (60mg) for the health claim on the label, before it is allowed to be sold.

I would use CBD in a safe way and read the label and warnings.

There is a lot of research in the use of CBD oil (at the correct dosage) in many conditions such as pain management, anxiety and lowered mood. All of which are prevalent in Australia today. If we had a safer alternative with less side effects to manage such conditions it would be less of a burden on the healthcare system as a whole.

Supplements in Australia are generally priced quite high and are not sustainable long term for most. If CBD was affordable for most it would be much more beneficial for the wider population.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, mild anxiety.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD but would like to try it for the chronic pain I am living with.

I have a friend who is using CBD legally and safely and is experiencing improvement of their symptoms.

Setting a lower price for CBD is essential as my costs for medication and treatment are high and my income is low.

CBD should be easily accessible via online and shopfront.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I've been using CBD for nearly a year now and have found that my health conditions has improved immensely since being on it even to the degree of being able to reduce my normal prescription.

I pay a lot for CBD at the moment so cheaper prices would definitely benefit me and I'm sure many other people.

CBD could be accessed via the pharmacy counter to keep it under control.

Only publish my submission on the TGA website with confidential information redacted. Surname and address

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild anxiety, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would not use CBD in a safe way and will not read the label and warnings.

My brother and wife use it in the London as it's available from pharmacies and they are responsible citizens getting benefit from stressful lives in a big City

The current standard of living prices are very high, the coronavirus has impacted the economy severely and generally people need affordable accessible healthy natural alternatives to prescription medications which often has other unwanted side effects. But i do also believe there is a place for both side by side

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not used CBD as yet but would if it was more readily available for purchase. I am comfortable with the idea of trying CBD for minor health conditions and contributing my experience to those from researchers and health professionals. I think this is an opportunity to allow CBD to be used for a wider range of ailments than the rather restricted treatments it is currently used for. I have difficulty sleeping and look forward to trying CBD as an alternative treatment to the low dose antidepressant that I currently take.

I think Australians should have access to low price CBD so that everyone will be able to access the benefits gained from its use.

I think that CBD should be available through pharmacies as well as any health care professional.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I have not personally used CBD oil as it has not been available in Australia. There are many people who will benefit from being able to access safe, good quality CBD without prescription for use for minor health issues such as pain and anxiousness. I know many people in the USA who have been using CBD oil safely, without prescription, for pain management and mild anxiety.

Lower prices makes CBD oil accessible to more people

CBD oil without requiring a prescription and available for purchase online. Not restricted to pharmacies.

I would use CBD in a safe way and read the label and warnings.

Yes have used for a PTSD situation. Helped lower anxiety and reduced insomnia

Stupid question. The lower the price the more Australians can access it. The only way to do this is make it open competition and freely available not through high cost pharmacy route.

As above

I would use CBD in a safe way and read the label and warnings.

I believe CBD oil should be widely accessible because I have read quite a lot about the benefits it has for many conditions with very few if any side effects. Even though I don't need it at this time It would be a relief to know it was easily accessible and of good quality. I think it really is safe and effective enough that it would become part of every households medicine kit.

DescrObviously lower prices for CBD would make it much more accessible for many more Australians as well as myself, especially if needed for long term treatment.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the proposal by a private applicant for widely available CBD, minor claims only & no restriction on dose.

If available, I would like myself or my loved ones to try CBD for help with restful sleep, nothing at this time but I think Australians should be allowed to freely access it at an acceptable dose.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

DescrMajority of people are not wealthy. CBD needs to be available for everyone.

If and when people need it. The public need access when they require it.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I do not consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

Kind regards,

Consumer

Dear Therapeutic Goods Administration,

Following is my response to the public consultation to amend the scheduling for cannabidiol.

I support the "Hybrid" option for widely available lower cost CBD, up to 90mg/day, adults only, TGA Monograph for minor claims & may self-report health effects.

If available, I would like myself or my loved ones to try CBD for mild pain, stress, mild anxiety, help with restful sleep, relief of symptoms of medically-diagnosed Irritable Bowel Syndrome (IBS), general health and wellbeing.

I want to try good quality CBD for minor health conditions now and at the lowest price, while health claims continue to be researched.

I would use CBD in a safe way and read the label and warnings.

I would really like to have access to CBD so that I can use it for stress, anxiety and inflammation.

I think it is important to be at a price that is affordable or some Australians may resort to using street marijuana to try making their own CBD which would be unsafe

I believe that the best access would be through pharmacy & health food stores where the staff are educated about CBD so that they can assist people in making educated choices and use safe dosage.

Only publish my submission on the TGA website, do not publish my name or any other information about me.

I do not consent to the publication on the TGA website of my personal information.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.

I declare that the information I have provided in this submission is true and correct.

DescrBecause most of us are already on a disability pension and that would be a huge factor of if buy it.

There are no downsides to cbd being readily available.

Publish my entire submission in full, including my name, work title and any other information about me on the TGA website.

I consent to the publication on the TGA website of my personal information, including any sensitive personal information in my submission.

I consent to the TGA contacting me to ask for more information or to seek feedback about how the consultation was undertaken.
