

To Whom It May Concern,

Submission to the TGA re Homeopathy Regulation

I wish to express my concern and objection to the potential change of homeopathy to an un-therapeutic good in Australia

I have seen it work for myself & my family over the last 2 years I have used it.

Therefore I strongly support Options 1 and 2, keeping homeopathic products' regulation as it currently stands and requiring scientific evidence for high-level claims. This approach preserves homoeopathic products as therapeutic goods and brings them into line with other medicines.

Regards
